BALLUFF

sensors worldwide

Industrial Networking and Connectivity

System Technology

With over 50 years of sensor experience, Balluff is a leading global sensor specialist with its own line of connectivity products for every area of factory automation. Balluff is based in Germany and has a tight international network of 54 representatives and subsidiaries.

Balluff stands for comprehensive systems from a single source, continuous innovation, state-of-the-art technology, highest quality, and greatest reliability. That's not all: Balluff also stands for exceptional customer orientation, customized solutions, fast worldwide service, and outstanding application assistance.

Secure foundation for optimized value creation at the customer
High-quality, innovative products tested in our own accredited laboratory and a quality management system certified according to DIN EN ISO 9001:2008 form a secure foundation for optimized added value for our customers.

Whether electronic and mechanical sensors, rotary and linear transducers, identification systems or optimized connection technology for high-performance automation, Balluff masters not only the entire technological variety with all of the different operating principles, but also provides technology that can be used worldwide. After all, it also fulfills regional standards. Wherever you are in the world, Balluff technology is never far away. You won't have to look far for your nearest Balluff expert.

Balluff products increase performance, quality and productivity around the world every day. They provide the basic conditions for meeting the demands of the global market for increased performance and reduced costs. Even in the most demanding areas. No matter how stringent your requirements may be, Balluff delivers state-of-the-art solutions.

Fully exploit the potential of high quality. With intelligent, comprehensive network solutions.

Customized Services

Balluff stands for comprehensive systems from a single source

Systems and service, industrial networking and connectivity, industrial identification:
Industrial RFID systems, vision sensors, fieldbus modules, passive splitters, inductive couplers, IO-Link, plug connectors and connecting cables

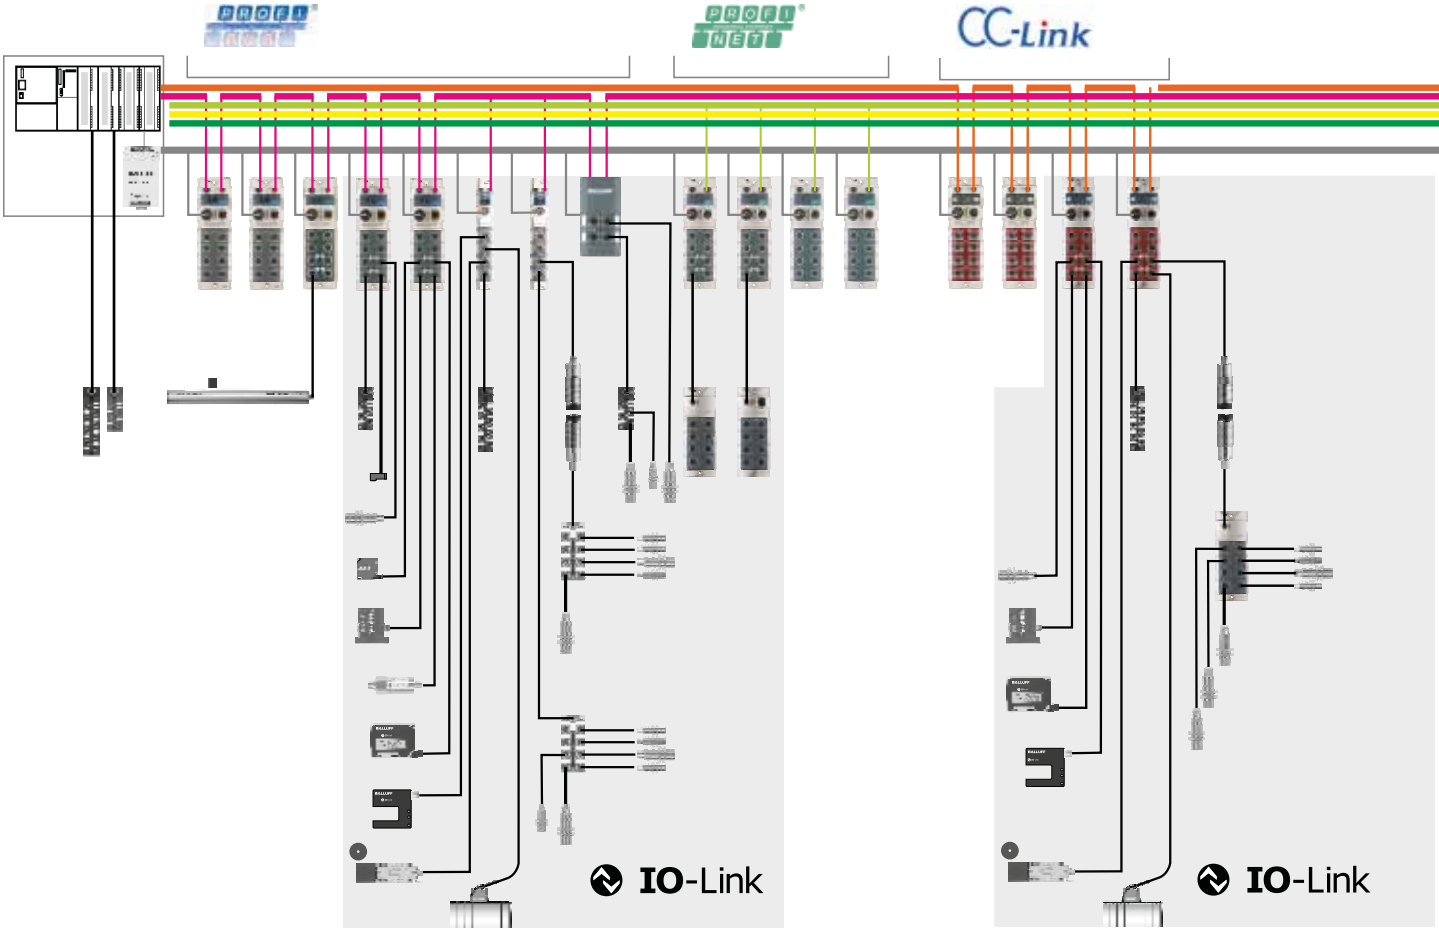
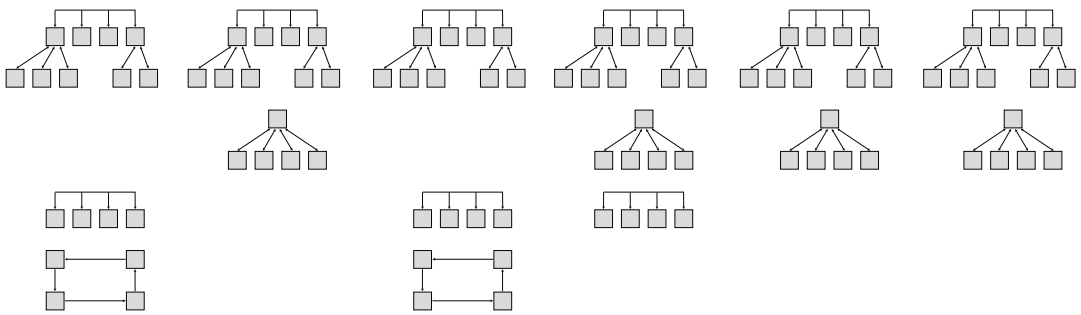
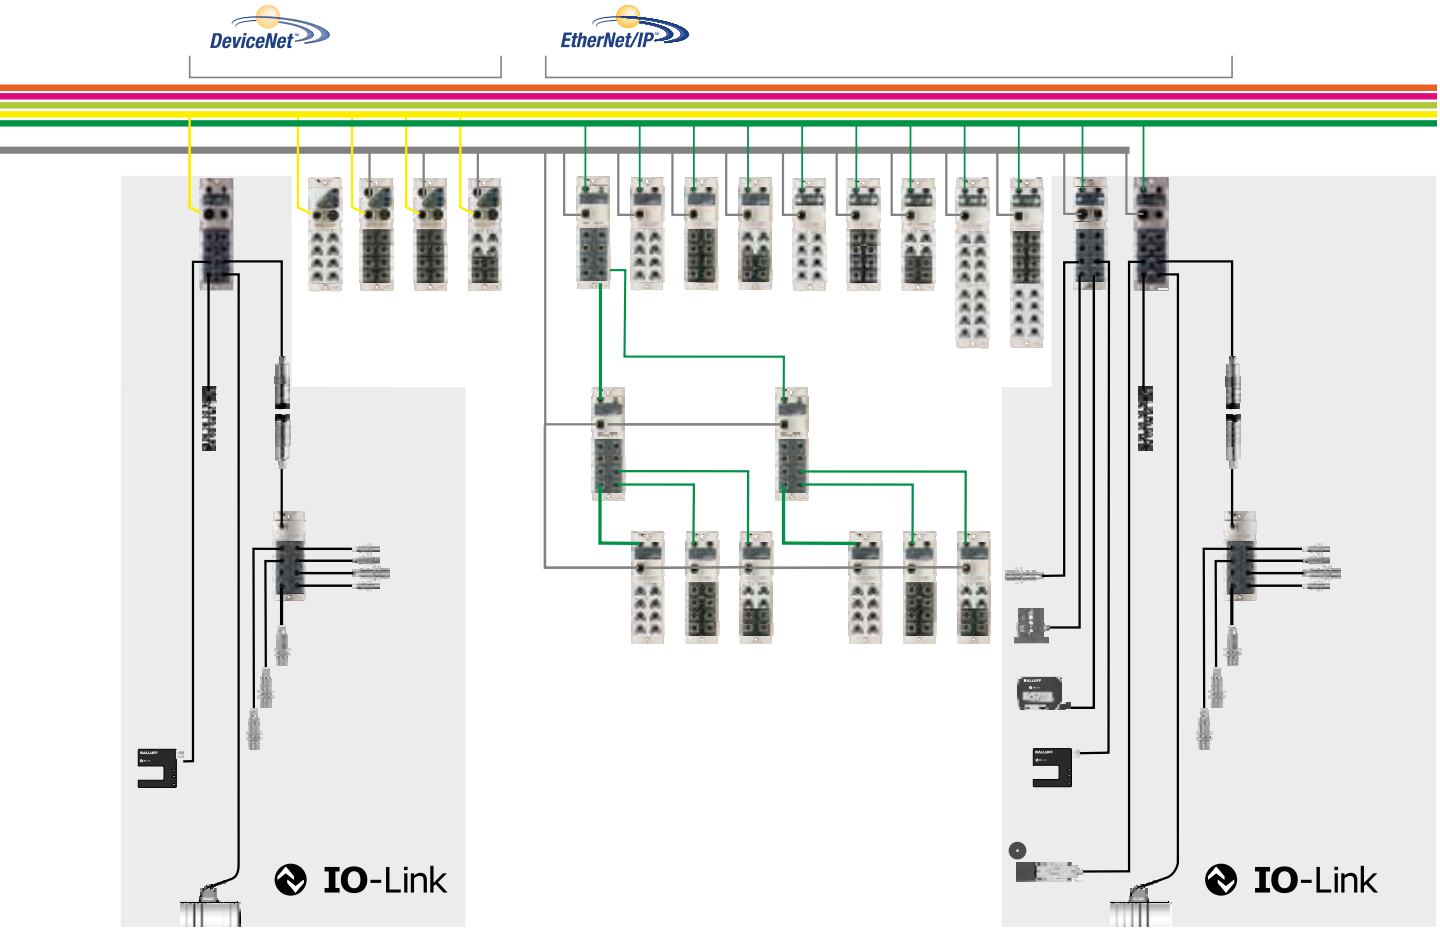
Overview of fieldbus systems



Bus systems in industrial automation

Network	Profibus	Profinet	CC-Link	Devicenet	Ethernet	Ethernet/IP
Number of nodes	126	No limit	64	64	No limit	No limit
Cable	2-wire	4-wire, twisted	3-wire	5-wire	4-wire, twisted	4-wire, twisted
Transfer rate	9.6 kbs to 12 Mbs	10 Mbs 100 Mbs 1000 Mbs	156 kbs 625 kbs 2500 Mbs	125 kbs 250 kbs 500 kbs	10 Mbs 100 Mbs 1000 Mbs	10 Mbs 100 Mbs 1000 Mbs
Termination	2 terminating resistors at each end	Not necessary	1 terminating resistor at each end	1 terminating resistor at each end	1 terminating resistor at each end	Not necessary
Power supply	Separate	Separate	Separate	Via network cable	Separate	Separate
Maximum length	1200 m	100 m	1200 m	500 m	100 m	100 m





Bus topologies		Benefits +	Disadvantages −
Tree		■ **Minimum wiring effort**	■ Active/passive couplers may be necessary
Star		■ **Each node has its own connection** ■ **Good visual implementation**	■ Total length may be excessive in some cases ■ Complex star couplers ■ Communication only via star coupler
Bus		■ **Simple cabling**	■ Electrical compromise when bus termination used ■ Limited number of bus nodes and bus length
Ring		■ **Extended networks possible**	■ Failure of one node means complete failure of the network

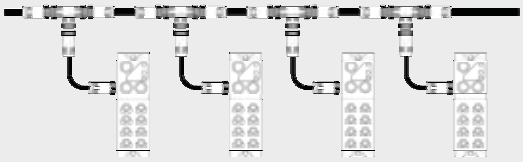
Fieldbus Systems

Fieldbus System: Profibus

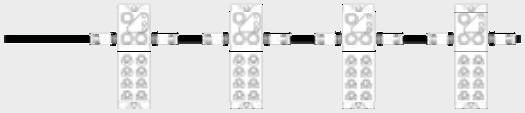
In use for years, Profibus stands for well-engineered fieldbus technology and reliably supports modern manufacturing. As a full-service provider, Balluff offers a wide range of components for optimum Profibus use. Regardless of controller manufacturer, Balluff has the perfect solution in store for you: for efficient field and process communication with simple wiring and fast integration through direct installation in your system and the possibility of fast modifications. Even in harsh environments.
Balluff Profibus solutions are IO-Link capable, allowing you to take advantage of solid IO-Link benefits. Wiring is made even simpler. Integrated diagnostics prevent system failure and the central configuration quickly returns systems to operation. You save time and benefit from real cost advantages.
In addition, Profibus offers investment security, since standard IEC 61158/EN 50170 simplifies expansion of your system.
With mature connection technology, Balluff contributes to increased efficiency and growing cost savings.

Product topology

Trunk and drop lines
- Very simple troubleshooting
- A single device can be disconnected without disrupting the network
- Extra cable requirements result in higher costs



Connected in series
- Difficult troubleshooting
- Disconnecting a device interrupts the network
- Lower costs due to fewer cabling components



Mixed topology
- Creation of logical groups results in relatively simple troubleshooting
- Popular method – ideal cost/benefit ratio

The best I/O modules in the industry

Impressive features. Impressive functionality.
Impressive performance

Clearly visible status LEDs
Low-quality LEDs that are often difficult to identify under demanding production conditions perform poorly when used in high-speed applications. Unlike Balluff status LEDs, which are large, bright, highly visible and provide maximum assistance. Balluff quality will help you complete setup and maintenance tasks and reduce machine downtimes with ease.

Powerful and reliable outputs
With an output current of up to **2 A**, Balluff output modules are capable of driving almost any load. Each output also offers an overload protection with LED indicator and a memory feature for easy troubleshooting.

Robust, full-metal housing
The fully encapsulated housing can withstand impacts, shaking, corrosive fluids, as well as people stepping on it and costs no more than a plastic housing.

Display
A firmly entrenched part of the module is a display that can be locked via the PLC, which prevents unauthorized access. Two LEDs controlled by the PLC allow you to visualize results that are not specific to the module or port at the location where they occur.

Inputs with high density
All Balluff input blocks offer two input points for each connector, accessed via a V splitter. A DESINA output is also optionally available via pin 2.

Innovative housing design
The extra-flat profile reduces potential dangers posed by cables. Rounded corners offer highly visible locations for channel markers and two mounting points are sufficient to secure the robust metal housing.

High-quality connectors and compatible accessories are required to create an efficient Profibus system. Balluff offers all the components you need for optimally setting up a Profibus network and providing it with first-class support.

The Balluff Profibus interface ensures optimum operation of IO-Link modules as well as acyclical operation of Profibus DP V1.

The module includes four IO-Link master ports that can be configured and used fully independently of one another. All IO-Link ports support COM1, COM2, COM3 (3-wire only) as well as SIO mode.

The IO-Link ports also include an additional input or input/output via pin 2. This means that SIO mode also enables the connection of complementary NO/NC and DESINA sensors.

You get four additional standard IO ports with eight inputs or eight freely configurable inputs/outputs for standard sensors and actuators up to **2 A**.

In addition to time savings and considerable cost savings, it provides even greater ease of operation. Balluff provides Profibus modules with a display that you can use to set station numbers or call up module information such as the hardware and software status. This increases security and simplifies maintenance.

Fieldbus	Profibus
Version	4× IO-Link, 16× DI/DO
Ordering code	**BNI005R**
Part number	BNI PBS-502-101-Z001
Supply voltage U_B	18...30 V DC
Indicator/input	BUS/RUN
Function indicator	Display/pushbutton
Module status indicator: Mod LED	Yes
Network status indicator: Net LED	Yes
Port status indicator	Black, red, yellow
Connection: Fieldbus	M12, B coded, socket/plug
Connection: AUX power	7/8", plug, 5-pin
Connection: I/O ports	M12, A-coded, female
No. of I/O ports	8
Number of inputs	Max. 16 PNP

P111 module for the cost-effective integration of micropulse transducers BTL

Profibus modules P111 are designed for connecting micropulse transducers, the robust position measuring systems for extreme ambient conditions that can be used universally. Thanks to their durable metal housing, Profibus modules P111 meet the highest mechanical requirements and are ideally suited for use in the harsh industrial environment. The modules are fitted with four interdependent ports for micropulse transducers BTL.
A maximum of 16 encoders can be used per BTL port. With a maximum rated length of 7500 mm. Four additional ports can be configured with digital or analog sensors, depending on the version.

You can achieve maximum functionality and cost efficiency for fieldbus integration by combining Micropulse transducers BTL with Profibus modules P111.

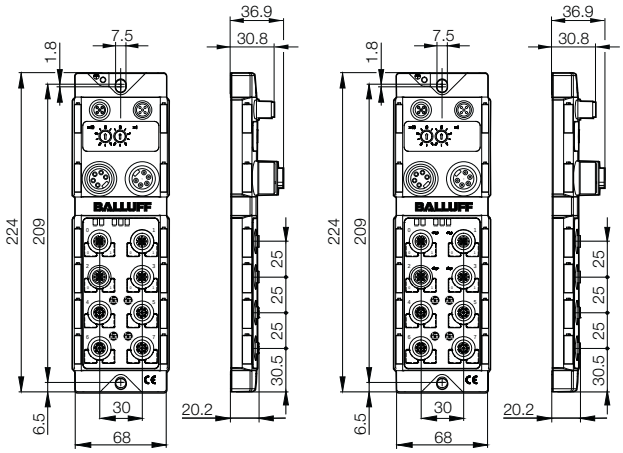
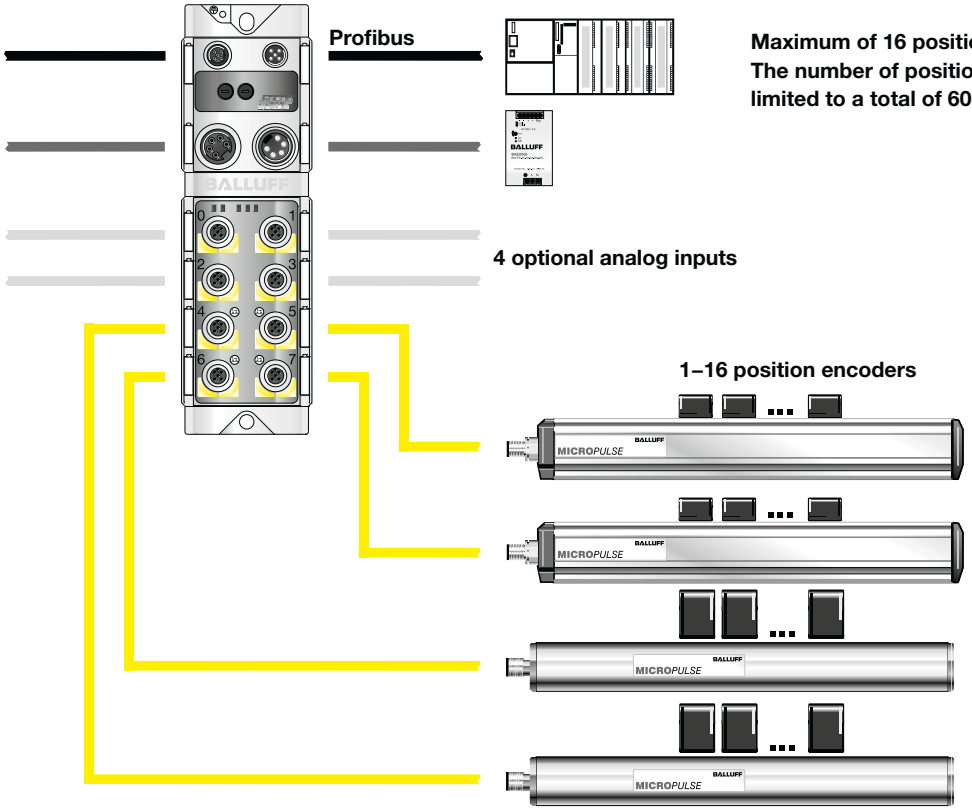
Operating temperature T_a	0...+70 °C	0...+70 °C
Weight	Approx. 735 g	Approx. 735 g
Fastener	2 mounting holes	2 mounting holes
Dimensions (L×W×H)	224×68×36.9	224×68×36.9
Housing material	Nickel-plated GD-Zn, matt finish	Nickel-plated GD-Zn, matt finish



All modules include four screw plugs and a label set.

P111 module for the cost-effective integration of micropulse transducers BTL



Maximum of 16 position encoders per BTL. The number of position encoders per module is limited to a total of 60.

IO-Link modules
For tight spaces – robust and compact

IO-Link master for tight spaces – robust and compact
The Profibus IO-Link master is the first choice for tight spaces and applications where there is dust, water, oils, or a risk of mechanical damage. The slim splitter in the rugged metal housing is particularly durable.
With its small size and versatility, it is well-suited for IO-Link-capable sensors, such as pressure or distance sensors. Or if you want to connect sensor hubs, operating panels or actuators (valve cluster units). For the perfect connection of mini-masters we provide compact, molded mini-plug connectors.
The Profibus IO-Link master is available with two or four IO-Link interfaces, which means you can connect up to 68 sensors in combination with IO-Link sensor hubs.
Unused IO-Link ports can be used as standard inputs or outputs. Thus, the system is used to its fullest when space is at a premium.

Fieldbus	Profibus DP	
IO-Link	Master	
Version	4× IO-Link ports, max. 8 DI/DO	
Ordering code	**BNI003P**	
Part number	BNI-PBS-507-002-Z011	
Supply voltage U_B	18...30 V DC	
Function indicator	BUS RUN	
Power-on indicator	V_A, V_S, undervoltage	
Connection: Fieldbus	M12, B-coded	
Supply voltage connection	7/8"	
Connection: I/O ports	M12, A-coded, female	
No. of I/O ports	4	
No. of IO-Link ports	Max. 4	
Number of inputs	Max. 8 PNP	
Number of outputs	Max. 8 PNP	
Configurable	Yes	
Max. load current, sensors/channel	200 mA	
Max. load current, output	≤ 1.6 A	
Port status indicator	Yellow LED	
Port diagnostic indicator	Short circuit/overload: red LED	
Total current $U_{Actuator}$	≤ 9 A	
Total current U_{Sensor}	≤ 9 A	
Degree of protection as per IEC 60529	IP 67 (when screwed into place)	
Operating temperature T_a	–5...+55 °C	
Storage temperature	–25...+70 °C	
Weight	Approx. 355 g	
Fastener	2 mounting holes	
Dimensions (L×W×H)	224×37×32 mm	
Housing material	Nickel-plated GdZn	

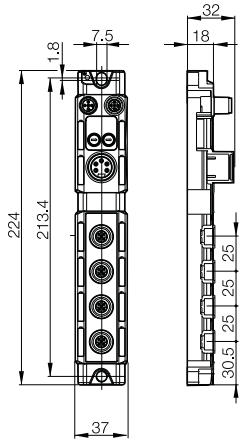
IO-Link Version 1.1

No. of IO-Link ports	4× master	
Operating modes (3-wire)	SIO, COM 1, COM 2, COM 3	
Communication indicator	Green LED	
Error indicator	Red LED	
Max. load current for IO-Link device	≤ 1.6 A	

IO-Link Version 1.1

All modules include four screw plugs and a label set.

The outer diameter of user-fabricated connectors may not exceed 19 mm!
We recommend using:
1 user-fabricated connector and
1 molded plug connector
or 2 molded plug connectors.



Panel module
IO-Link panel module for simple installation

New IO-Link panel module for simple commissioning
Not only are installation and commissioning simplified with the Profibus IO-Link panel module, but cabling is also cost-effective. Developed for small to mid-sized machines and systems, it is ideal for centralized wiring concepts and, with IO-Link sensor hubs, satisfies the demand for modular construction. Now the machine and equipment can be checked before they leave the plant and commissioned on-site with no additional wiring.
The IO-Link panel module is particularly interesting where expensive connectors would otherwise be needed for routing the cables. The module provides four IO-Link ports on the outer panel. Simply connect IO-Link sensor hubs or IO-Link capable sensors here to create efficient, cost-effective connections using standard cables. The power supply and Profibus interface are connected to the inner panel. Another feature: a separate actuator power supply. This allows actuators such as hydraulic valves / pneumatic valve cluster units to be turned off separately.

Fieldbus	Profibus DP	
Version	4× IO-Link, max. 4 DI	
Ordering code	**BNI0030**	
Part number	BNI PBS-504-002-K008

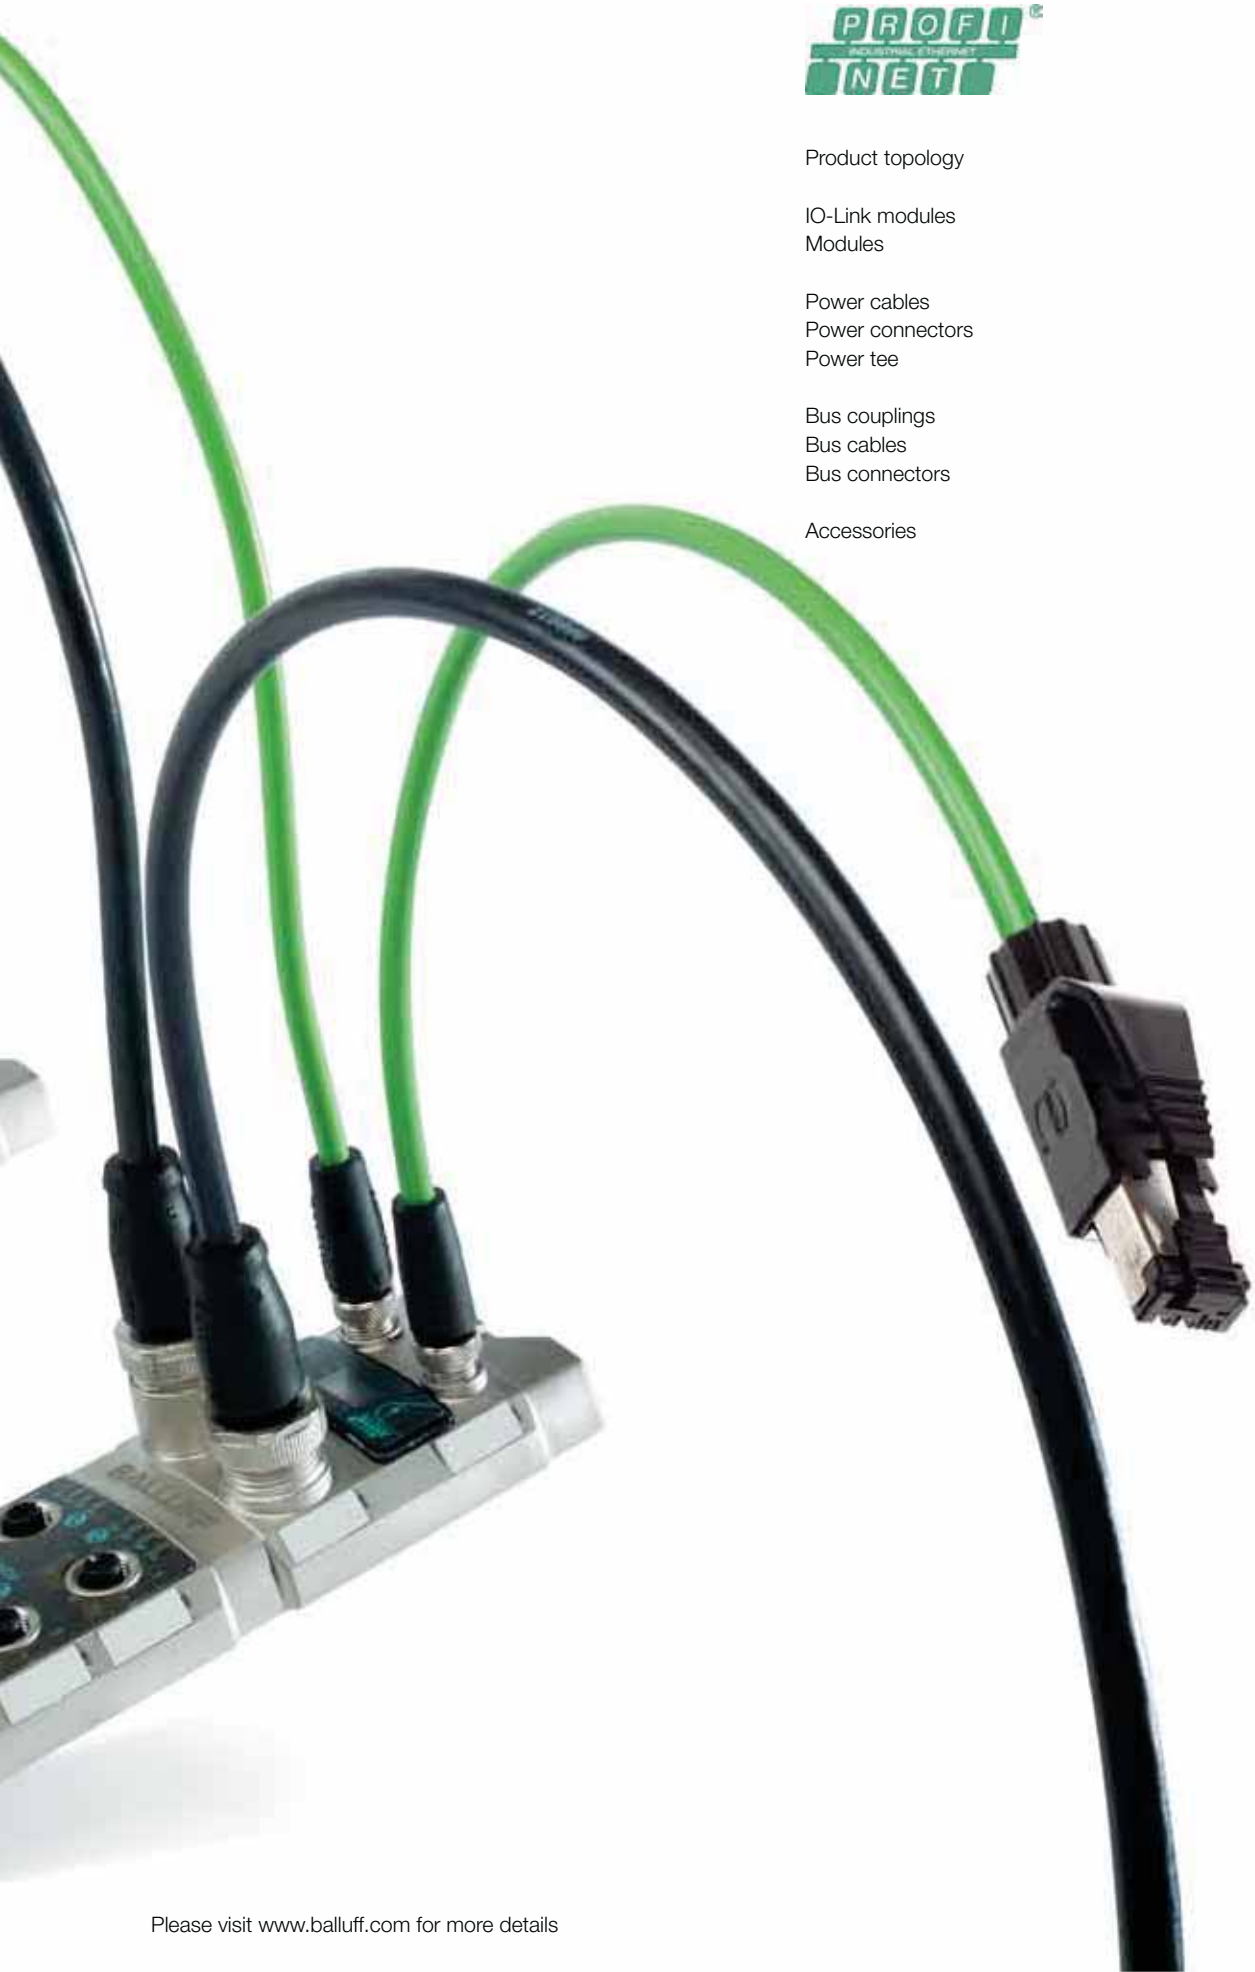
Fieldbus Systems

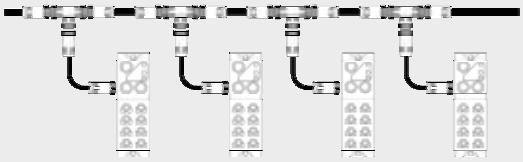
Fieldbus System: Profinet

With Profinet, industrial automation has made a significant advancement. Profinet operates on an Ethernet basis and is considerably faster than Profibus. Other advantages: Profinet can be fully integrated from the control level to the drive. Even in harsh environments. With Profinet, you also directly link drives and safety technology to the network environment.
You can also combine Profinet with Profibus with no additional work. Connecting is also extremely simple with IO-Link. This ensures freedom of installation and guarantees simplified wiring, integrated diagnostics and central configuration. Time savings and tangible cost benefits included. Thus, you help to ensure improved process quality through connectivity.

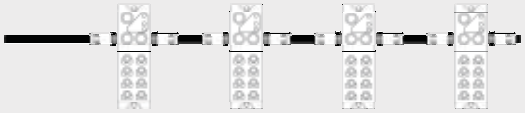


Product topology

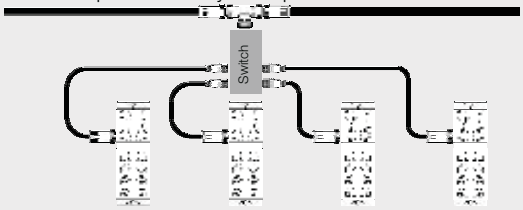
Trunk and drop
- Very simple troubleshooting
- A single device can be disconnected without disrupting the network
- Extra cable requirements result in higher costs



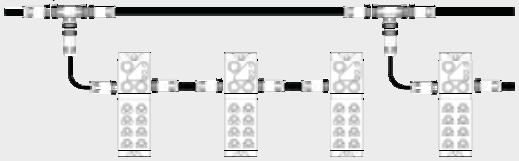
Connected in series
- Difficult troubleshooting
- Disconnecting a device interrupts the network
- Lower costs due to fewer cabling components



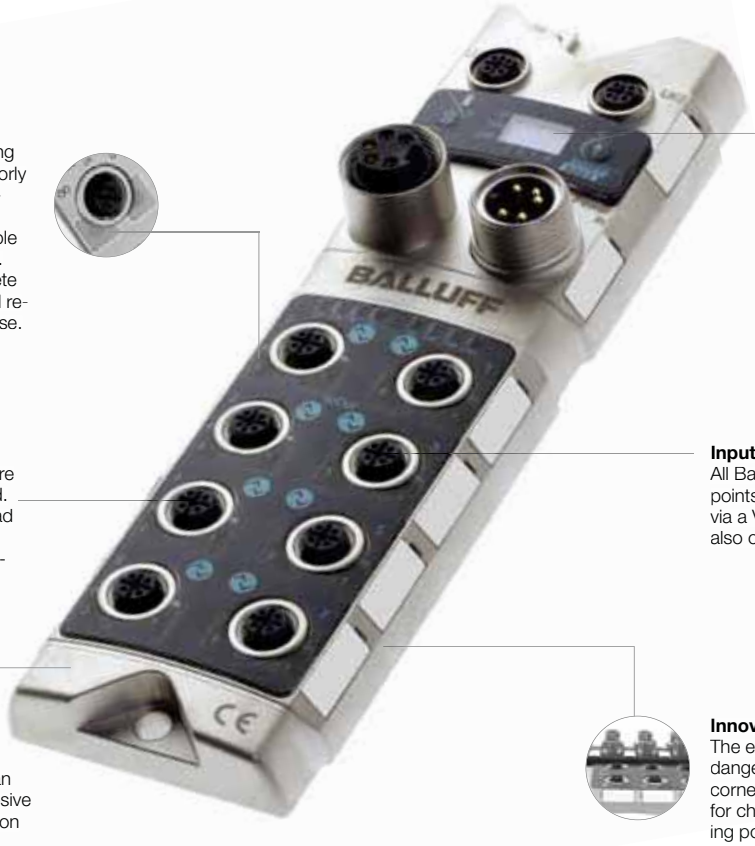
Star
- Simple troubleshooting
- Ideal for large I/O clusters
- Less expensive – only one splitter box needed



Mixed topology
- Creation of logical groups results in relatively simple troubleshooting
- Popular method – ideal cost/benefit ratio



Clearly visible status LEDs
Low-quality LEDs that are often difficult to identify under demanding production conditions perform poorly when used in high-speed applications. Unlike Balluff status LEDs, which are large, bright, highly visible and provide maximum assistance. Balluff quality will help you complete setup and maintenance tasks and reduce machine downtimes with ease.



Display
A firmly entrenched part of the module is a display that can be locked via the PLC, which prevents unauthorized access.
Two LEDs controlled by the PLC allow you to visualize results that are not specific to the module or port at the location where they occur.

Powerful and safe outputs
With an output current of up to **2 amps**, Balluff output modules are capable of driving almost any load. Each output also offers an overload protection with LED indicator and a memory feature for easy troubleshooting.

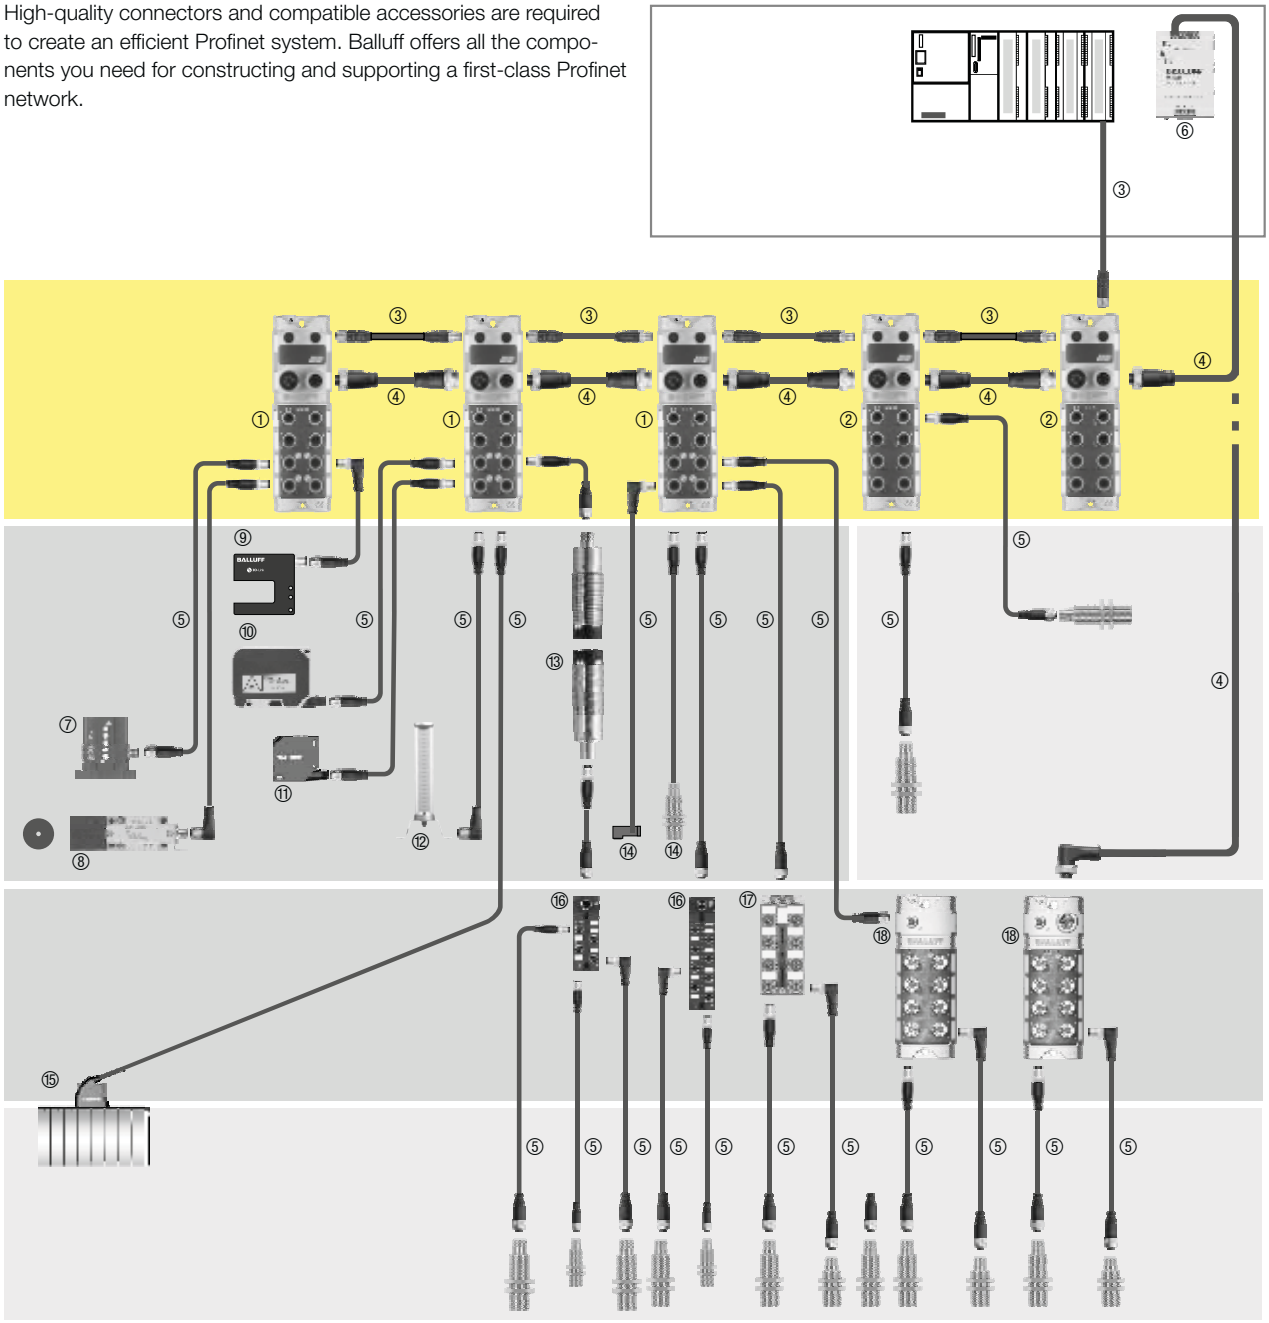
Inputs with high density
All Balluff input blocks offer two input points for each connector, accessed via a V splitter. A DESINA output is also optionally available via pin 2.

Robust, full-metal housing
The fully encapsulated housing can withstand impacts, shaking, corrosive fluids, as well as people stepping on it and costs the same as a plastic housing.

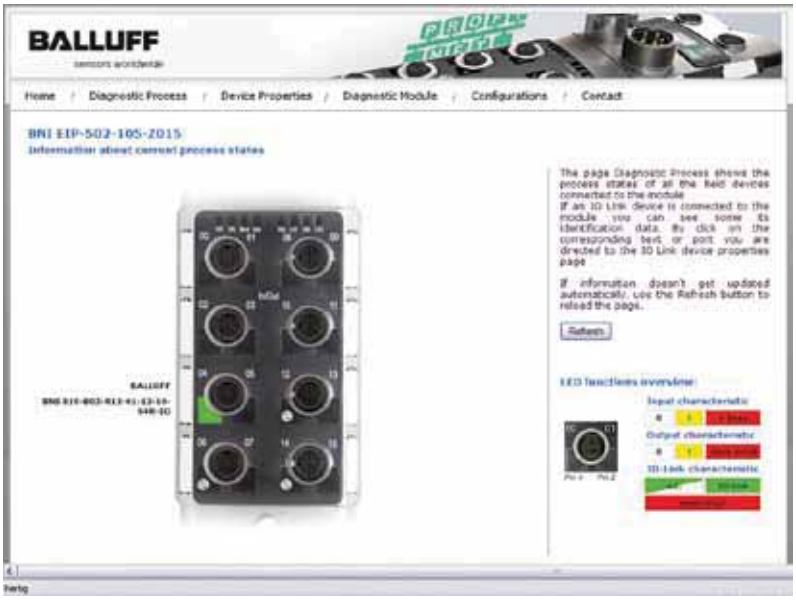
Innovative housing design
The extra-flat profile reduces potential dangers posed by cables. Rounded corners offer highly visible locations for channel markers and two mounting points are sufficient to secure the robust metal housing.

Product topology

High-quality connectors and compatible accessories are required to create an efficient Profinet system. Balluff offers all the components you need for constructing and supporting a first-class Profinet network.

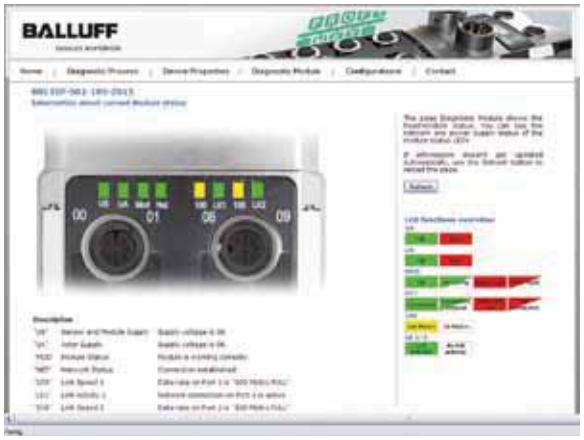


IO-Link



Webserver
For anyone that prefers a web interface, the Profinet modules from Balluff have an easily integrated webserver. This web page can be used to program the module addresses and configure several of the user-defined functions.

A simple browser provides immediate access to the integrated webserver, which has been implemented in all Profinet modules.



Extensive diagnostics functions are available here, such as displaying all module LEDs, including all representations in plain text.

In the "Device Properties" area you have the option, for example, of configuring devices connected to the IO-Link port.

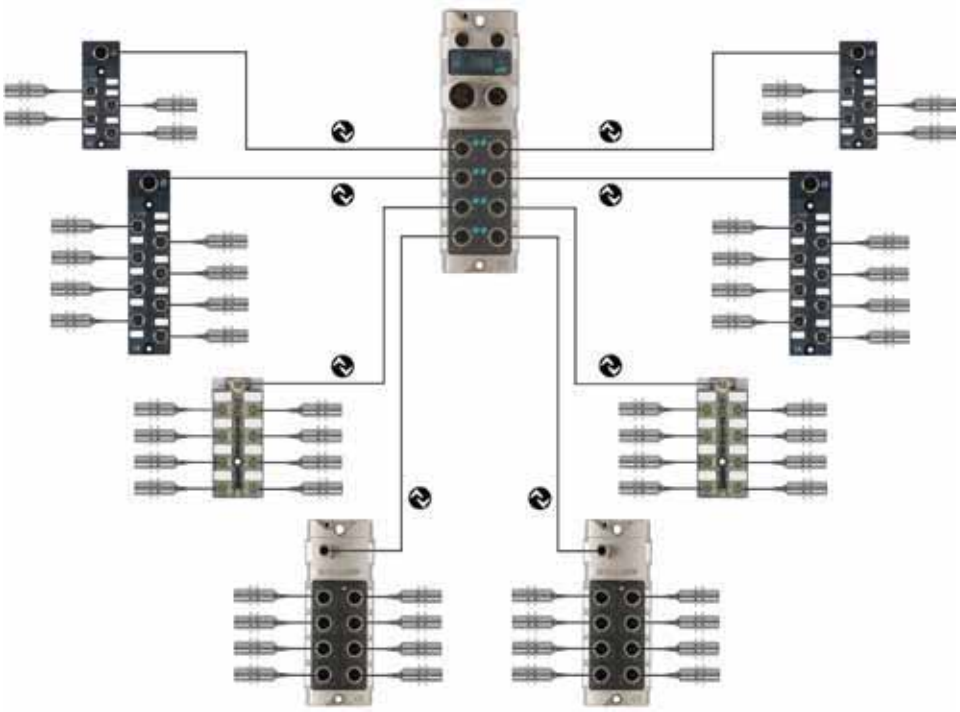
The module configuration, such as assigning or displaying the IP address, is concealed behind the "Configurations" function.

Profinet fieldbus module with eight IO-Link ports

136 IOs on a module
Balluff IO-Link solutions save cash money

Previously, at least nine fieldbus modules had to be used for the capability to activate 136 IOs. Today, a single Profinet module is sufficient.

In connection with the extremely cost-effective sensor/actuator hubs from Balluff, now up to 136 IO signals are offered which can be processed in a most efficient manner. In this way, compared to the standard fieldbus modules, there is a high cost savings of 15 to 20% per input. If you add the savings from the fieldbus and power cables to that, you get 30 to 40%. A cost-effective M12 standard cable BCC is sufficient to switch on a sensor/actuator hub. Furthermore, sensor hubs need just one bus address, can variably group sensor signals together within an area of 20 m and ensure exceptional efficiency.

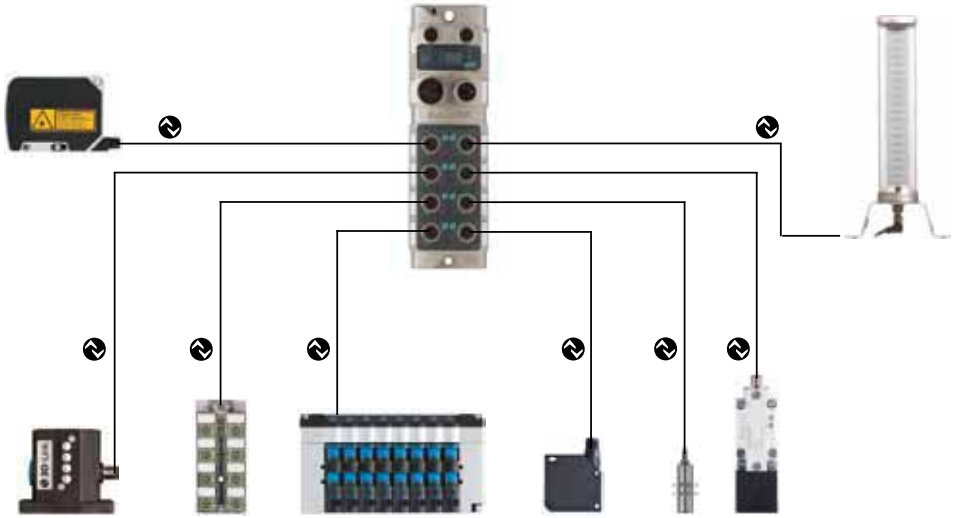


1000 tasks, one module:
The Profinet module with eight IO-Link ports

Whether position measurement, object detection, identification, fluid sensor applications, temperature or pressure measurement, through IO-Link, the Profinet module is suitable for every job.

IO-Link not only has advantages for installing standard sensors, but also can integrate intelligent devices via the same interface. With that, the module provides a uniform interface from the signal to the control level.

During field installation of intelligent devices, there are frequently high costs, as shielded cable and intelligent interface cards such as analog input cards are used in the controller. IO-Link not only makes error-prone analog inputs superfluous, it also reduces the wiring, inspection and hardware effort. With simple plug-and-play of unshielded, cost-effective M12 lines, the system is quickly and securely brought into operation.



Second generation with display, integrated switch and web server

For high-performance applications, consider the Profinet IO-Link master interface, which also supports isochronal realtime (IRT) using ERTEC 200.

The module includes four IO-Link master ports that can be configured and used fully independently of one another. All IO-Link ports support COM1, COM2, COM3 (3-wire only) as well as SIO mode.

The IO-Link ports also have an additional input or input/output via pin 2. This means that SIO mode also enables the connection of complementary NO/NC and DESINA sensors.

You get four additional standard IO ports with eight inputs or eight freely configurable inputs/outputs for standard sensors and actuators up to 2 A.

Profinet is increasingly becoming the communications medium of the future for mechanical and plant engineering. In some areas, it has already incrementally replaced the Profibus. Based on Ethernet, communication over Profinet is significantly faster, and the volume of data is significantly higher than with classic fieldbus systems and allows the connection of time-critical drive technology. Furthermore, Profinet is quick to install and integrates easily into existing networks. In addition to time savings and considerable cost savings comes the added benefit of ease of operation. This is because only Balluff provides Profinet modules with a display that allows IP addresses to be blocked, protecting the modules from accidental changes. This increases security and simplifies maintenance.

Naturally, even in the second generation of Profinet modules, IO-Link is a firmly entrenched part. The Profinet module with IO-Link functionality has four or eight IO-Link master ports, which the user can configure and use completely independently of one another. You get four additional, freely configurable standard-I/O ports, which make an additional eight inputs/outputs available for standard sensors and actuators.

As a new feature, the second generation of Profinet provides an integrated 2-port Ethernet switch that makes it possible to install a linear topology in the system without an additional external switch.

Also new in this generation is the integrated webserver.

Fieldbus		Profinet
Version		8× IO-Link, 16× DI/DO

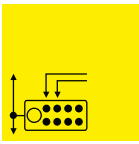
Fieldbus Systems

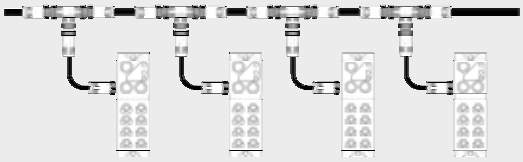
Fieldbus System: CC-Link

CC-Link is the most dominant and fastest growing fieldbus technology in Asia. The open network is supported by the global CC-Link partner association CLPA, which comprises more than 1000 companies.
CC-Link is a standardized fieldbus designed to integrate different automation components from a wide range of providers. CC-Link is an effective integral system that will fulfill 100% of your application requirements.
Utilize our extensive, high-quality CC-Link portfolio to implement your own powerful control topologies using products from a single source.

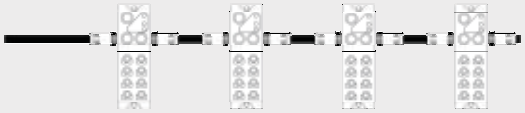


Product topology

Trunk and drop
- Very simple troubleshooting
- A single device can be disconnected without disrupting the network
- Extra cable requirements result in higher costs



Connected in series
- Difficult troubleshooting
- Disconnecting a device interrupts the network
- Lower costs due to fewer cabling components



Clearly visible status LEDs
Low-quality LEDs that are often difficult to identify under demanding production conditions perform poorly when used in high-speed applications. Unlike Balluff status LEDs, which are large, bright, highly visible and provide maximum assistance. Balluff quality will help you complete setup and maintenance tasks and reduce machine downtimes with ease.

Powerful and safe outputs
With an output current of up to **2 amps**, Balluff output modules are capable of driving almost any load. Each output also offers an overload protection with LED indicator and a memory feature for easy troubleshooting.

Robust, full-metal housing
The fully encapsulated housing can withstand impacts, shaking, corrosive fluids, as well as people stepping on it and costs the same as a plastic housing.

Addressable display
IP address, subnet mask and gateway address appear on the illuminated display. Push buttons can be used to set each octet of the addresses specified above. The display can be disabled via the PLC (controller).

Inputs with high density
All Balluff input blocks offer two input points for each connector, accessed via a V splitter. A DESINA output is also optionally available via pin 2.

Innovative housing design
The extra-flat profile reduces potential dangers posed by cables. Rounded corners offer highly visible locations for channel markers and two mounting points are sufficient to secure the robust metal housing.

⑤ **Power supplies BAE**	Page 365

CC-Link IO distributors are exceptionally well-suited for use in harsh industrial environments and enable the consistent, cost-optimized fulfillment of requirements for decentralized installation technology.

CC-Link advantages

- Constant data throughput, even when processing large data volumes
- Deterministic response for reliable realtime control
- Controllers programmed over the network
- Powerful diagnostic system for clear identification of problem areas
- Network stations switched on and off during operation
- Network stations restored automatically
- Standby master function
- Optional configuration software

Industries

- Semiconductor industry
- Automotive industry
- Food and beverage industry
- Pharmaceutical industry

- Clearly visible status LEDs
- Addressable display
- Powerful and reliable outputs
- Innovative housing design

CC-Link with IO-Link functionality

A module with four IO-Link ports is now available in addition to the CC-Link fieldbus modules.

The IO-Link master ports can be configured and used entirely independently of one another, which means there are four additional freely configurable standard I/O ports available, which provide you with another eight inputs/outputs for standard sensors and actuators.

Fieldbus Systems

Fieldbus System: Devicenet

For a simple choice of outstanding network components, Balluff offers the entire spectrum of high-performance network technology. For applications in the USA, such as with Rockwell Automation and other controller manufacturers, we can provide you with all of the modules for efficient Devicenet implementation. For simple installation, speedy integration through direct mounting as well as the possibility of fast modifications. And all of this completely independent of controller manufacturer. You save time and lower costs.

Choose an efficient field and process combination using our components. We give you the choice of a combination regardless of controller manufacturer, letting you easily choose based on your requirements and utilize our comprehensive, fully developed Networking and Connectivity product line that leaves nothing to be desired beyond the control cabinet.

DeviceNet™

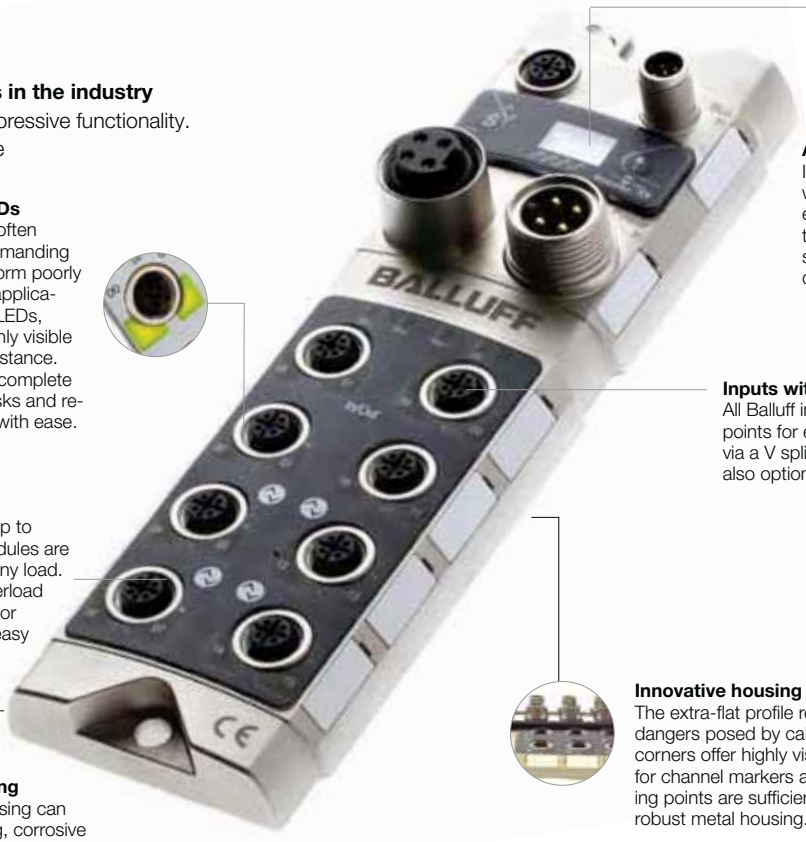
Product topology

The best I/O modules in the industry
Impressive features. Impressive functionality. Impressive performance

Clearly visible status LEDs
Low-quality LEDs that are often difficult to identify under demanding production conditions perform poorly when used in high-speed applications. Unlike Balluff status LEDs, which are large, bright, highly visible and provide maximum assistance. Balluff quality will help you complete setup and maintenance tasks and reduce machine downtimes with ease.

Powerful and safe outputs
With an output current of up to **2 amps**, Balluff output modules are capable of driving almost any load. Each output also offers overload protection with LED indicator and a memory feature for easy troubleshooting.

Robust, full-metal housing
The fully encapsulated housing can withstand impacts, shaking, corrosive fluids, as well as people stepping on it and costs the same as a plastic housing.



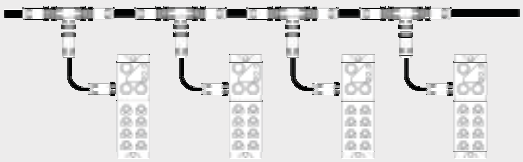
Addressable display
IP address, subnet mask and gateway address appear on the illuminated display. Push buttons can be used to set each octet of the addresses specified above. The display can be disabled via the PLC (controller).

Inputs with high density
All Balluff input blocks offer two input points for each connector, accessed via a V splitter. A DESINA output is also optionally available via pin 2.

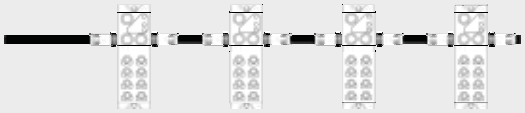
Innovative housing design
The extra-flat profile reduces potential dangers posed by cables. Rounded corners offer highly visible locations for channel markers and two mounting points are sufficient to secure the robust metal housing.

Devicenet™ system concept from Balluff
Machine design should not be restricted by inflexible network topology. Balluff Devicenet™ products comprise cables, tees and hubs that you can use to combine elements of all topologies with one another. Flexible installation is ensured by raw cables, connection cables and color-coded, field-attachable connectors.

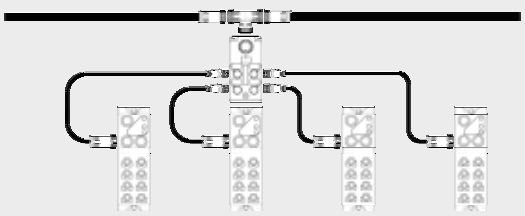
Trunk and drop
- Very simple troubleshooting
- A single device can be disconnected without disrupting the network
- Extra cable requirements result in higher costs



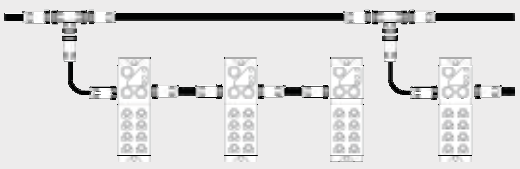
Connected in series
- Difficult troubleshooting
- Disconnecting a device interrupts the network
- Lower costs due to fewer cabling components



Star
- Simple troubleshooting
- Ideal for large I/O clusters
- Less expensive – only one splitter box needed



Mixed topology
- Creation of logical groups results in relatively simple troubleshooting
- Popular method – ideal cost/benefit ratio



Complete Devicenet™ product matrix
Precisely adapted cables and accessory parts are required to maximize utilization of the I/O blocks. Balluff offers all the components you need for constructing and maintaining a world-class Devicenet™ network.

BNI DNT-502-100-Z001
- 4 IO-Link master ports
- SIO, COM 1, COM 2, COM 3
- IO-Link version 1.1
- 4 additional I/O ports
- 16 I/O max.

BNI DNT-104-000-Z004
- 16 PNP inputs on 8 connections powered by the Devicenet™ network
- Short-circuit protected
- Short-circuit diagnostics
- I/O size: 4-byte input, 0-byte output

BNI DNT-202-000-Z005
- 8 sourcing outputs supplied via
- auxiliary power source
- Rated output current 2 A
- Resettable latching overload diagnostics at point level
- I/O size: 3-byte input, 2-byte output

BNI DNT-302-000-Z005
- 16 points configured as PNP inputs or sourcing outputs
- Inputs and outputs powered via auxiliary power source
- Rated output current 1.6 A
- Short circuit at point level and resettable overload diagnostics
- I/O size: 7-byte input, 4-byte output

IO-Link Version 1.1

All modules include four screw plugs and a label set.

Fieldbus	Devicenet
Version	4× IO-Link, 16× I/O
Ordering code	**BNI005A**
Part number	BNI-DNT-502-100-Z001
Supply voltage U_B	18...30 V DC
Indicators/input	Display/pushbutton
Net function indicator	Green LED
Fault function indicator	Red LED
Module status indicator: Mod LED	Yes
Network status indicator: Net LED	Yes
Port status indicator	Black, red, yellow
Power-on indicator	V_A, V_S, undervoltage
Connection: Fieldbus	M12, B coded, socket/plug
Supply voltage connection	7/8", male, 5-pin
Connection: I/O ports	M12, A-coded, female
No. of I/O ports	8
Number of inputs	max. 16
Number of outputs	max. 16
Configurable	Yes
Max. load current, sensors/channel	200 mA
Max. load current, output	1.6 A/2 A
Port status indicator (signal status)	Yellow LED
Port diagnostic indicator (overload)	Red LED
Total current $U_{Actuator}$	< 9 A
Total current U_{Sensor}	< 9 A
Degree of protection as per IEC 60529	IP 67 (when screwed into place)
Operating temperature T_a	–5…+70 °C
Storage temperature	–25…+70 °C
Weight	Approx. 580 g
Fastener	2 mounting holes
Dimensions (L×W×H)	225×68×36.9 mm
Housing material	Nickel-plated GdZn

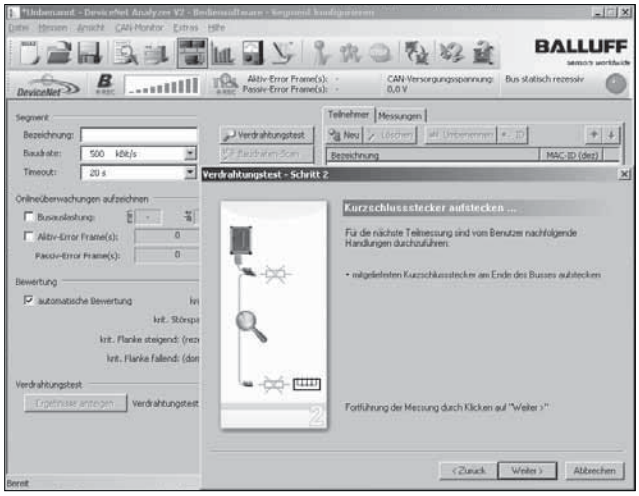
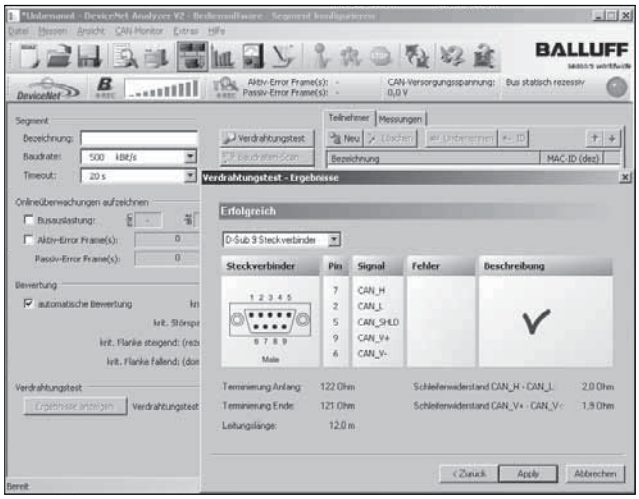
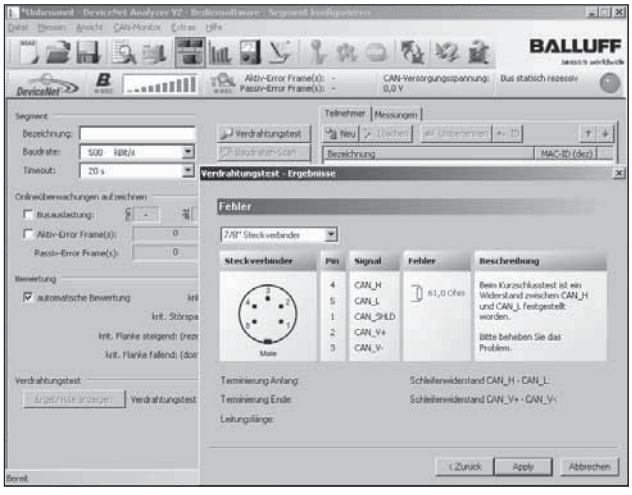
Analyzer– for analyzing, monitoring and maintaining Devicenet installations



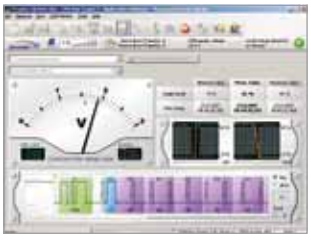




The Devicenet Analyzer is a particularly powerful tool for analyzing, commissioning, monitoring and maintaining Devicenet/ CAN bus systems. The Devicenet tester was designed primarily for preventive maintenance purposes. Whether maintenance technicians, integrators or technical experts, anyone who requires reliable information on the functional status of their Devicenet system can use the Devicenet analyzer to increase the overall efficiency of their facility. On-site testing and analysis simplify your working day, increase reliability and save you time.

Wiring test during commissioning

The analyzer wiring test is able to detect defects and weak points such as incorrect cable types and lengths, short circuits, line breaks and faulty plug connections as early as the installation phase. Analysis of the bus physics before or during commissioning is another important feature. Every node can check the rate of change, signal-to-noise ratio and much more to enable the consistent identification of telegrams with a poor signal quality as well as the rapid identification of possible causes of the faults (such as missing/excess number of bus terminations, faulty bus drivers, bus or stub lines that are too long, etc.). Not only does this ensure that the specification is observed, but it also ensures optimum signal quality. The bus operates more reliably and, at the same time, is more resistant to EMC problems.



Analyzer– for analyzing, monitoring and maintaining Devicenet installations, bitmaps

Monitoring during ongoing operation
A comparison with previous measurements can be performed easily during operation, either at regular intervals or continuously via an online function. If required, the Devicenet analyzer saves all the measuring and report data for the installation being monitored. A gradual degradation of quality caused by cable wear, for example, can then no longer be overlooked. Preventive maintenance saves time and costs compared to a sudden system failure.

Scope of delivery
The analyzer set in a durable case equips the user ideally for all eventualities. The device is equipped with a complete set of high-quality Devicenet accessories designed for harsh industrial use. The user can get started right away because all the necessary components such as adapters, adapter cables, tees and bus terminating resistors are already included. The analyzer also has a USB interface for connecting a PC or notebook. The device is very simple to operate thanks to the easy-to-use PC software.

Fieldbus Systems

Fieldbus System: Ethernet/IP

In many areas, Ethernet/IP has replaced Devicenet and has become a globally recognized standard for network technology.
Based on Ethernet, Ethernet/IP is considerably faster than Devicenet and facilitates the integration of drive technology.
Furthermore, Ethernet/IP can be quickly installed and integrated in existing networks.
In addition to time savings and considerable cost savings, Balluff provides the added benefit of user-friendliness. Only our products can block IP addresses on Ethernet modules with a display and protect against accidental changes. As a result, you not only increase safety, but also simplify maintenance. The innovative address plug also guarantees simple exchange of modules.

Use the extensive line of Balluff Ethernet/IP products for your high-performance system. Because maximum efficiency is only possible with an optimized network.

Approvals

Input
- 16 or 32 PNP inputs
- Short-circuit protected
- Short-circuit diagnostics

Input/output
- 8 PNP inputs and 8 outputs or 16 PNP inputs and 16 outputs
- Short-circuit protected
- Short-circuit diagnostics
- Overload protection at point level
- Rated output current 2 A
- Overload diagnostics
- Resettable, latching overload diagnostics

Output
- 8 or 16 outputs
- Overload protection at point level
- Rated output current 2 A
- Overload diagnostics
- Resettable, latching overload diagnostics

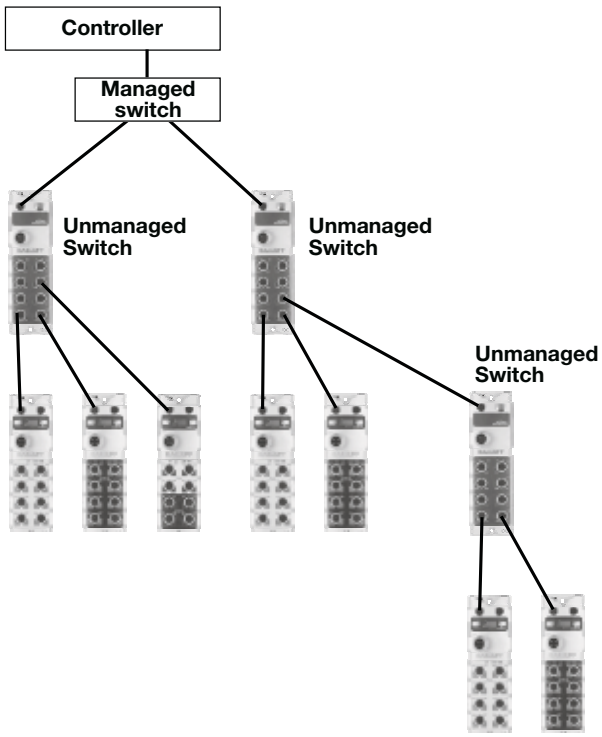
Unmanaged switches
- Unmanaged switch with 9 ports
- Dual power sources
- 10/100 base Tx ports
- Supports half/full duplex
- Overload diagnostics
- M12 sockets, D-coded
- Store-and-forward technology

Advantages of star topology

In industrial Ethernet networks, star topologies have prevailed over daisy chain topologies. Balluff offers star topologies exclusively due to their greater reliability.

The advantages in detail
- Elimination of the single point of failure on the I/O block and cable level
- Immediate segment notification for quickly locating errors
- Managed switches use IGMP snooping to increase the control efficiency of multicast traffic
- Managed switch functions are not available when integrating at the device level

At first glance, the daisy chain topology appears to save money. However, implementing this topology requires the installation of a switch in each I/O block. This increases the cost of each I/O block, even if not all blocks (e.g. the last in a chain) can use this function. Since dedicated switches are now affordable, compensating for the costs is irrelevant. All possible savings are also offset by technical disadvantages.



Consistent communication all the way to the sensor
No other industrial network has seen the explosive level of growth experienced by Industrial Ethernet. Because communication from start to finish all the way to the sensor/actuator offers security. With the deterministic high-speed throughput and the proven reliability of the physical layer, Industrial Ethernet will continue to grow further in the coming years.
At Balluff, you will find a high-performance range of permanently mountable I/O blocks with compatible cables and accessory parts.

Ethernet/IP
Integrated communication saves costs

Ethernet/IP has developed into a globally recognized standard for network technology that links field devices to centralized control solutions. Ethernet/IP can be quickly installed and integrated in existing networks.

Balluff Ethernet/IP comprises two versions of permanently mountable I/O blocks, unmanaged switches, network cables and accessories. At the heart of the extensive line of Balluff products are I/O blocks. They are characterized by low startup costs per point and are designed to save money through maximum system readiness and simple maintenance throughout the entire service life of the system.

I/O-block network functions

- Simple, flexible IP addressing method
- BOOTP/DHCP
- IP 67 address plug (IPAP) for fast changes
- Addressable display (Series 100 only)
- Webserver interface
- Certified by ODVA to ensure reliable operation and full interoperability
- Operation with transfer rates of 10 Mbit/s and 100 Mbit/s for maximum throughput (automatic detection)
- Robust M12 Ethernet connection (D-coded)
- Supports star topology for increased reliability, exact troubleshooting and fast commissioning

Clearly visible status LEDs
Low-quality LEDs that are often difficult to identify under demanding production conditions perform poorly when used in high-speed applications. Unlike Balluff status LEDs, which are large, bright, highly visible and provide maximum assistance. Balluff quality will help you complete setup and maintenance tasks and reduce machine downtimes with ease.

Robust, full-metal housing
The fully encapsulated housing can withstand impacts, shaking, corrosive fluids, incorrect assembly as well as people stepping on it and costs the same as a plastic housing.

Innovative housing design
The extra-flat profile reduces potential dangers posed by cables. Rounded corners offer highly visible locations for channel markers and two mounting points are sufficient to secure the robust metal housing.

Powerful and safe outputs
With an output current of up to **2 amps**, Balluff output modules are capable of driving almost any load. Each output also offers an overload protection with LED indicator and a memory feature for easy trouble-shooting.

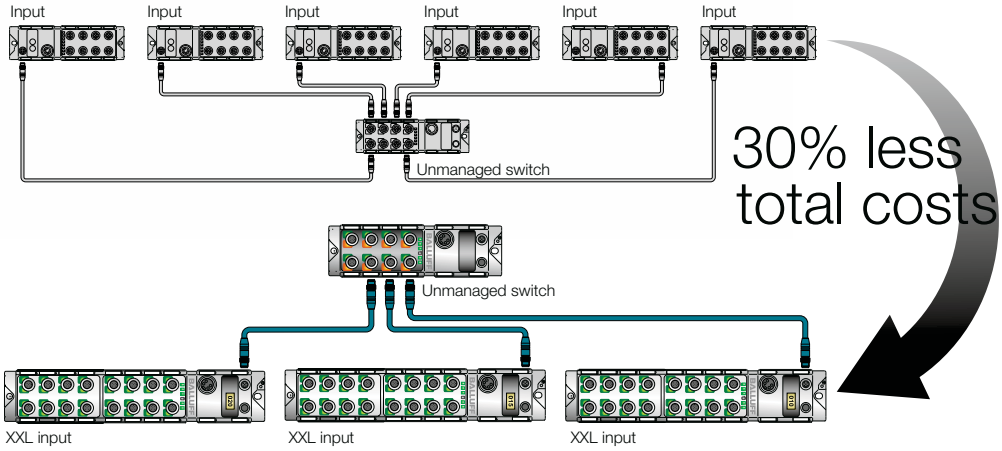
User-defined LEDs (100 series)
Like the IPAP, the display has red and green LEDs for simplifying possible troubleshooting.

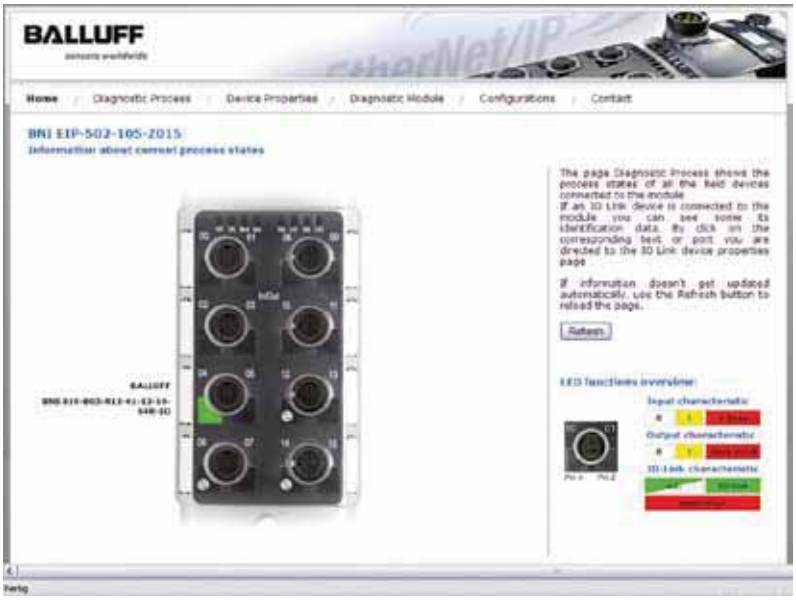
Addressable display (Series 100 only)
IP address, subnet mask and gate-way address appear on the illuminat-ed display. Push buttons can be used to set each octet of the addresses specified above. The display can be disabled via the PLC (controller).

High-density XXL-I/O blocks reduce costs

High-density I/O blocks reduce per point costs because they consolidate communication hardware costs in a single unit. For example, if two 16-point input blocks are replaced by a 32-point input block, the cost for each point is reduced by 30% for the I/O blocks alone!

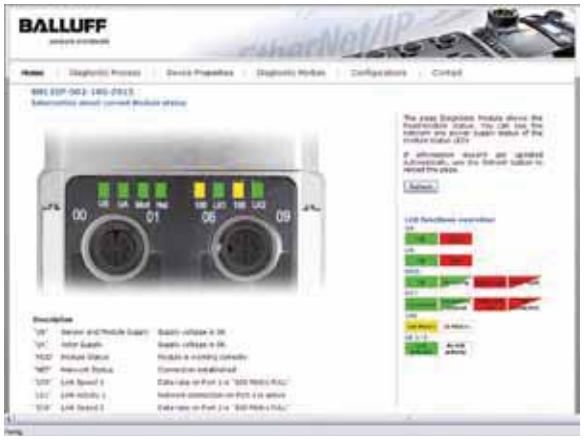
More savings
- Switch utilization reduced by 13% – renders one port superfluous
- No network cable required
- Without auxiliary power cable
- 20% less installation space





Webserver
For anyone that prefers a web interface, the Ethernet modules from Balluff have a simple integrated webserver. This web page can be used to program the module addresses and configure several of the user-defined functions.

A simple browser provides immediate access to the integrated webserver, which has been implemented in all Ethernet/IP modules of Gen IV.



Extensive diagnostics functions are available here, such as displaying all module LEDs, including all representations in plain text.

In the "Device Properties" area you have the option, for example, of configuring devices connected to the IO-Link port.

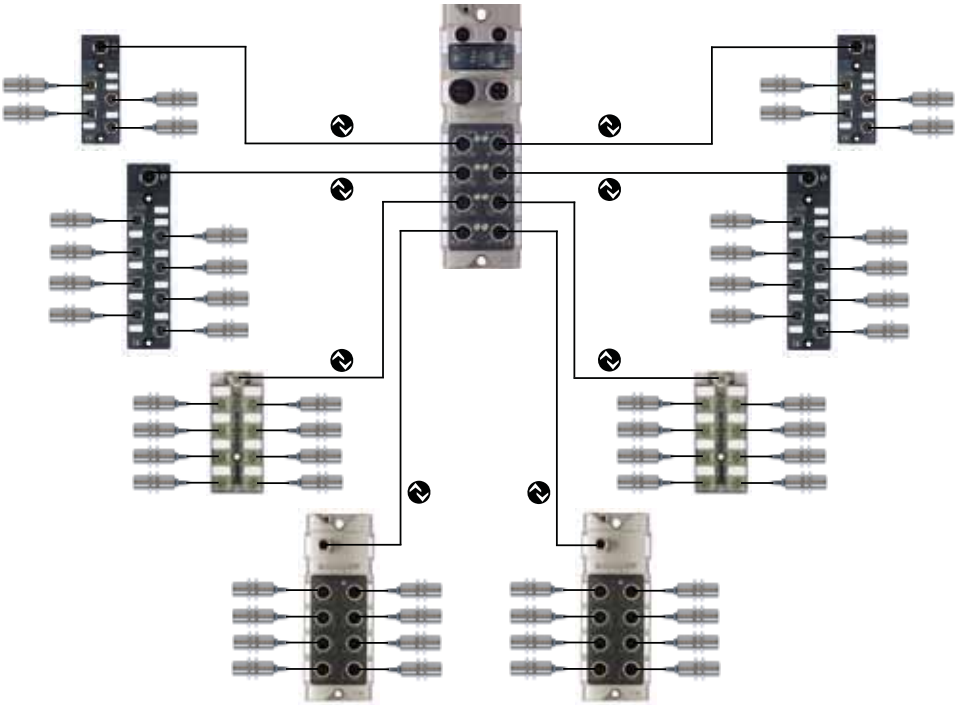
The module configuration, such as assigning or displaying the IP address, is hidden behind the "Configurations" function.

Ethernet fieldbus module with eight IO-Link ports

136 IOs on a module
Balluff IO-Link solutions save cash money

Until now, at least nine fieldbus modules had to be used in order to be able to activate 136 IOs. Today, a single Profinet module is sufficient.

In connection with the extremely cost-effective sensor/actuator hubs from Balluff, now up to 136 IO signals are offered which can be processed in a most efficient manner. In this way, compared to the standard fieldbus modules, there is a high cost savings of 15 to 20% per input. If you add the savings from the fieldbus and power cables to that, you get 30 to 40%. A cost-effective M12 standard cable BCC is sufficient to switch on a sensor/actuator hub. Furthermore, sensor hubs need just one bus address, can variably group sensor signals together within an area of 20 m and ensure exceptional efficiency.

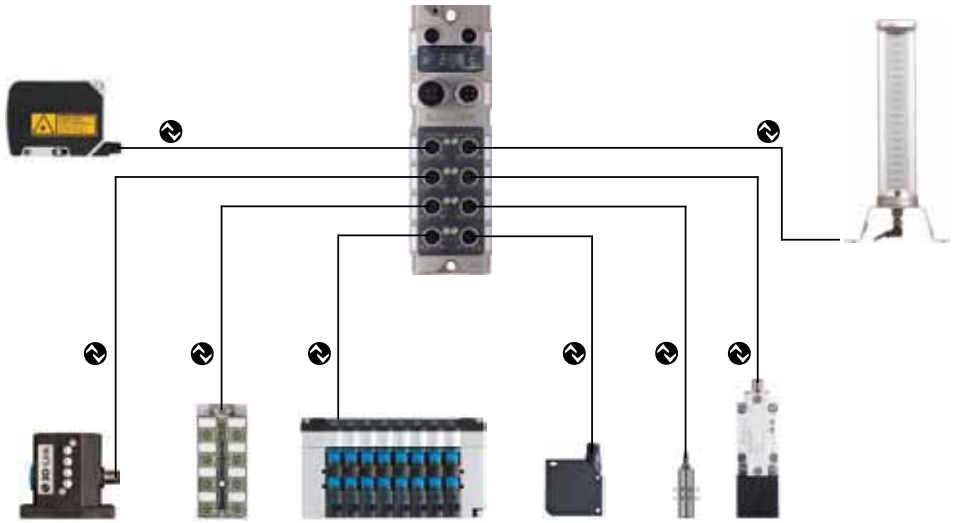


1000 tasks, one module:
The Ethernet module with eight IO-Link ports

Whether position measurement, object detection, identification, fluid sensor applications, temperature or pressure measurement: through IO-Link, the Ethernet module is suitable for every job.

IO-Link not only has advantages for installing standard sensors, but also can integrate intelligent devices via the same interface. With that, the module provides a uniform interface from the signal to the control level.

During field installation of intelligent devices, there are frequently high costs, as shielded cable and intelligent interface cards such as analog input cards are used in the controller. IO-Link not only makes error-prone analog inputs superfluous, it also reduces the wiring, inspection and hardware effort. With simple plug-and-play of unshielded, cost-effective M12 lines, the system is quickly and securely brought into operation.



Ethernet/IP with IO-Link functionality
IO-Link does not just communicate with Profibus, Profinet and CC-Link now. At Balluff, IO-Link now communicates with Ethernet/IP so that all the benefits of IO-Link are available right down to the second lowest level.

IO-Link not only ensures freedom of installation, but also guarantees simplified wiring, integrated diagnostics and central configuration. System failures can be prevented more reliably and systems restarted quickly if a failure occurs.

Ethernet/IP with IO-Link guarantees efficient operation.
Users gain time, save costs and incorporate intelligent connection technology to improve process quality.

The Ethernet/IP module with IO-Link includes four IO-Link master ports that can be configured and used fully independently of one another. This provides four additional, freely configurable standard I/O ports that offer a further eight inputs/outputs for standard sensors and actuators.

IO-Link Version 1.1

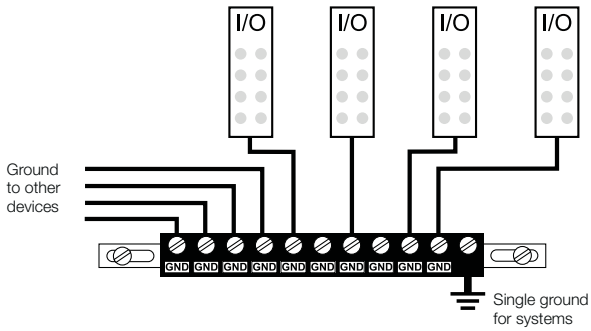
Information on grounding

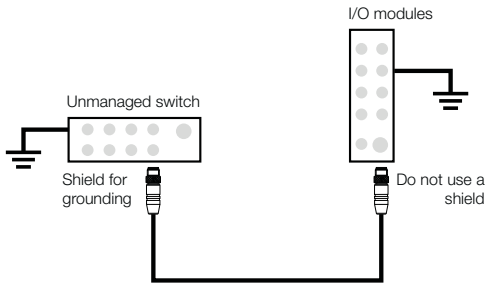
With a standard European grounding connection, use a joint grounding point for all blocks (see first illustration). All blocks remain within the same grounding potential. Grounding straps are included for mounting on a painted surface.

If a single-point grounding system is not implemented, it is possible to use a varying grounding potential. However, the shield then generates an equalizing current that has a negative effect on data transmission since it can cause interruptions to communication.

With most grounding connections in North America, local machines with completely shielded cables are each connected to a separate ground. This is described in ODVA publication PUB00148RO, "Ethernet/IP Media Planning and Installation Manual."

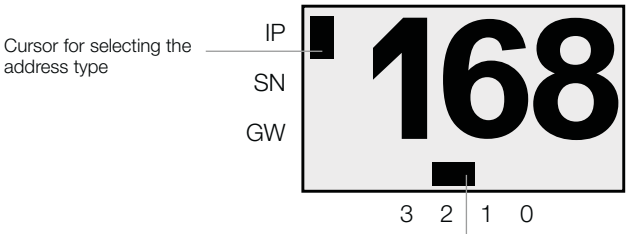
ODVA recommends that the shield be connected to ground at the switch and not at the network device. Ethernet specification IEEE802.3 also permits the use of unshielded cables.





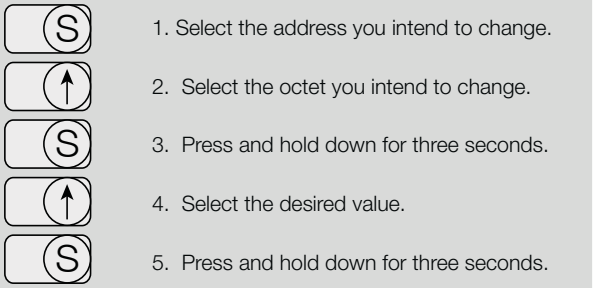
Ethernet/IP modules
Display with operating buttons

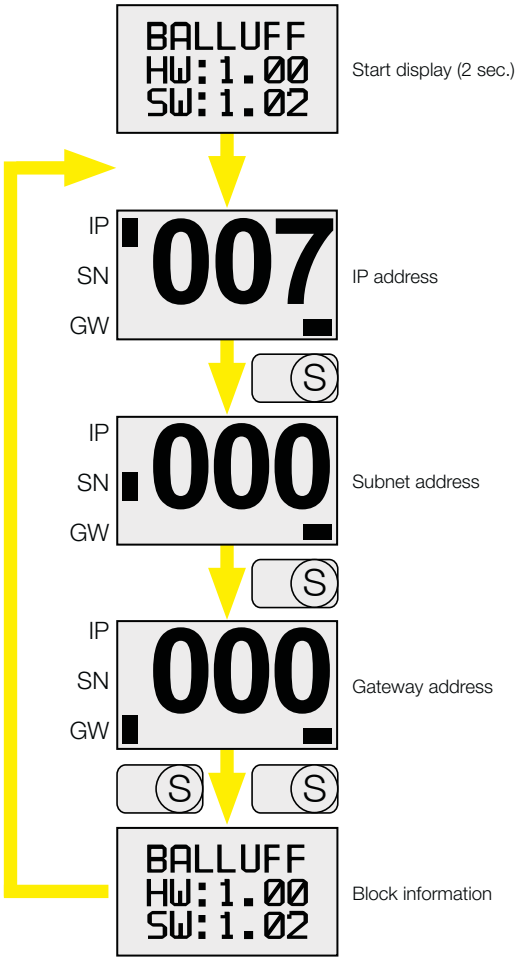
The Balluff Series 100 modules feature a digital display with two operating buttons that can be used to program the IP address, subnet and gateway address. You can also view the hardware and software versions from the module. When unused, octet 0 of the IP address is displayed by default.

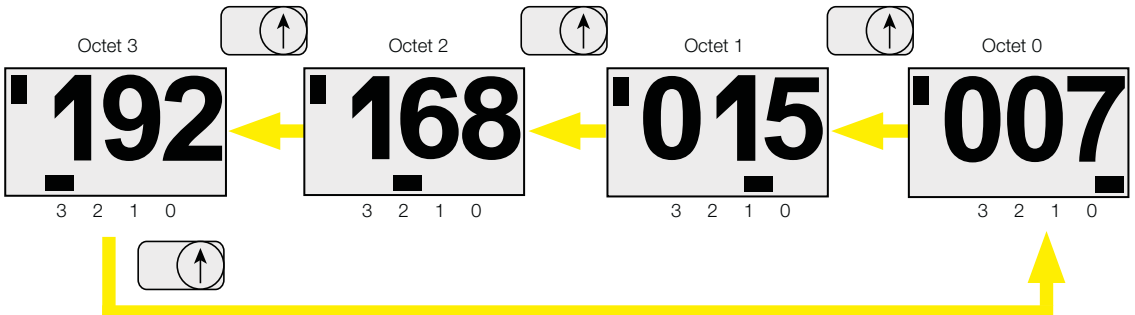


Address types
IP: IP address
SN: Subnet address
GW: Gateway address

Octet
3: Fourth octet
2: Third octet
1: Second octet
0: First octet







User-defined functions

User-defined LEDs

The green and red LEDs indicate errors and provide the user with assistance when troubleshooting during maintenance.

Disable buttons

Using the controller as an interface, the operating buttons can be disabled in order to prevent unauthorized access.

Ethernet 9-port switch IP 67

Ethernet-based network systems are gaining more and more importance in industrial automation. Balluff provides a wide variety of Ethernet-based systems and network components such as Profinet or Ethernet/IP for machine and plant equipment.

With Balluff, you receive a complete system so that you can use Ethernet to link Ethernet system components easily. The Ethernet product line was expanded with the addition of 5-port and 8-port Ethernet switches for this reason.

The switch makes it possible to connect 5-port and 8-port Ethernet devices to a component radially. The RJ45 ports and the 10 and 100 Mbps transmission rates support this. The transfer speed is automatically set via the auto-negotiation function. Wiring errors are reliably ruled out by the autocrossing function. This is because the module does not identify on its own what type of cable is being used.

IO-Link interface

IO-Link is the first standardized, uniform, universally applicable interface in control technology to transmit all sensor and actuator signals to the controller. Likewise, IO-Link passes control data down to the lowest sensor level. All of this makes automation even more powerful than ever before. And it does it by simple means.

IO-Link advantages at a glance

- Easy to get started, time-saving installation
- Automatic adjustment during ongoing operation
- Continuous monitoring

IO-Link

IO-Link

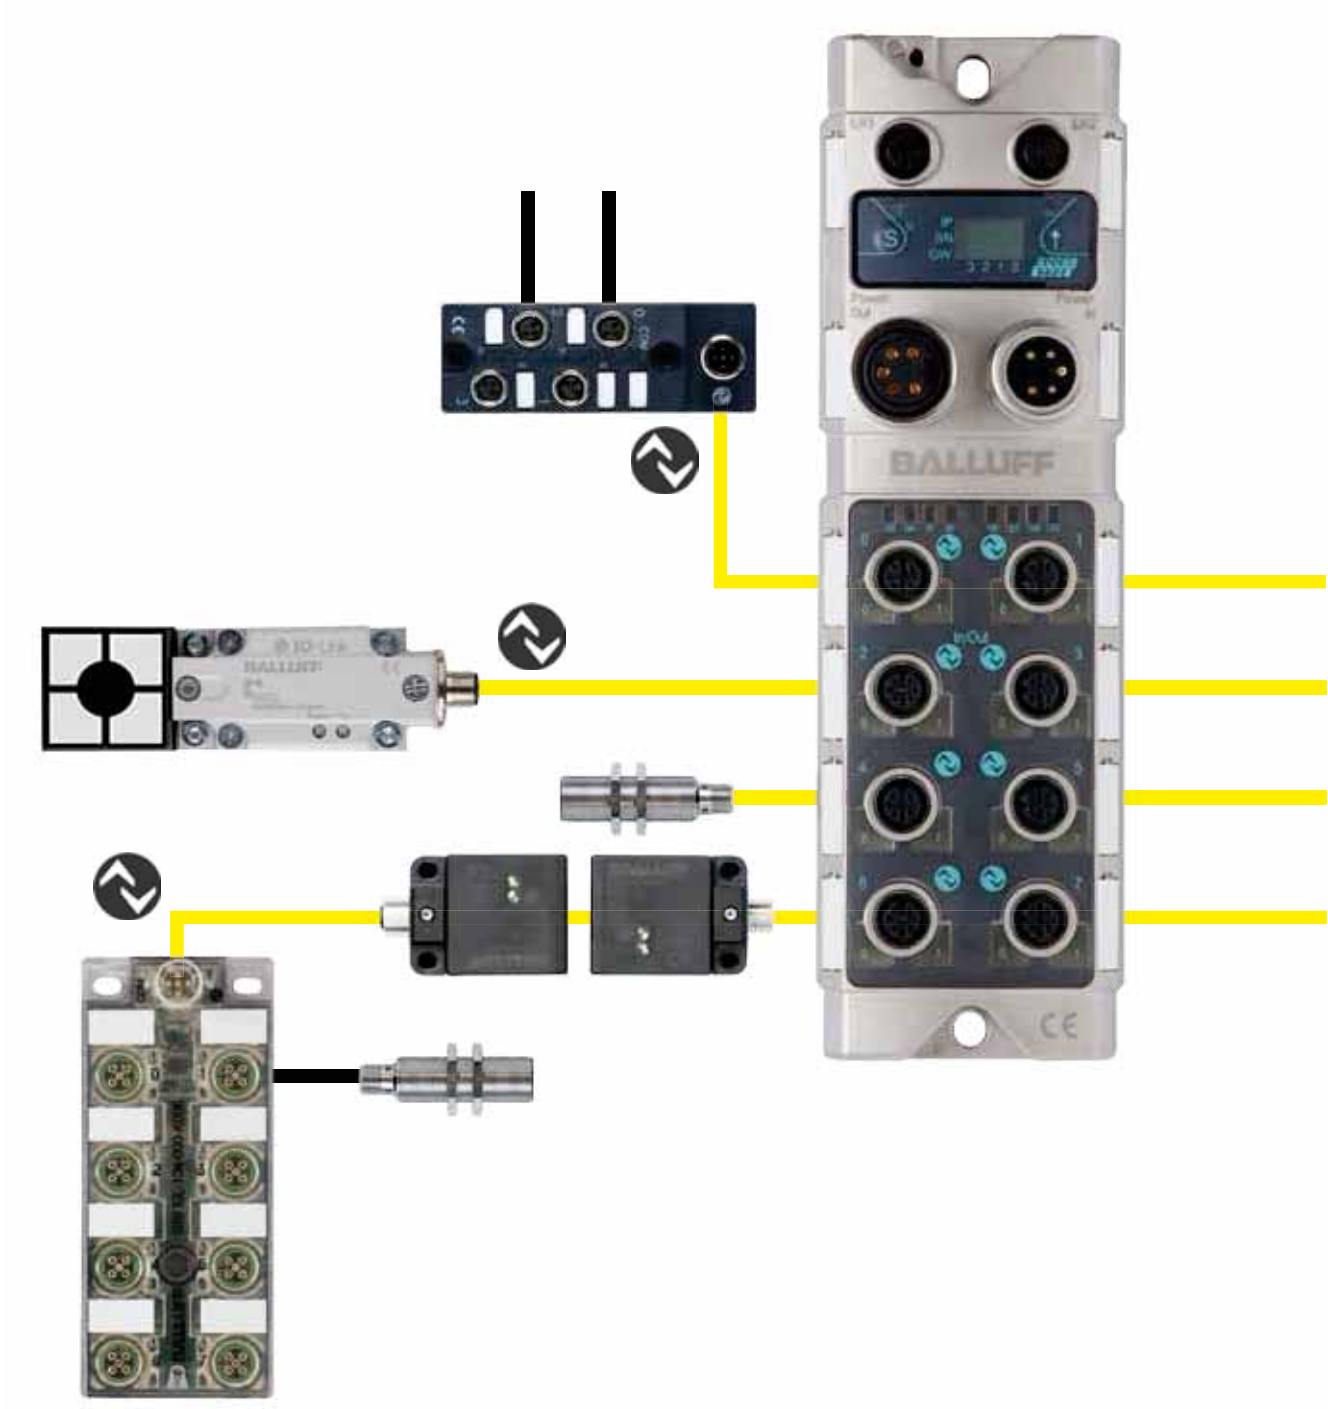
Network technology for reliable data transfer and more efficiency

More efficiency, lower costs

IO-Link saves time and money in overall production

IO-Link is all you need to make automation even more high-performance. This is because IO-Link provides substantial optimization and cost reduction potential for overall production.

The uniform, simple wiring, continuous diagnostics, and central configuration via the controller consequently provide an all-encompassing effect. And they do this in entirely different ways.



IO-Link
Network technology for reliable data transfer and more efficiency

Simplification of installation
- Faster, simpler connection to an unshielded, three-core standard cable
- Standard sensors can also be integrated into the fieldbus level
- 8-fold IO-Link master for eight different IO-Link devices or eight hubs, each with up to 16 binary sensors
- Cost-saving due to fewer mechanical installations
- High security against interference thanks to digital communication

Requirements-based maintenance
- Continuous diagnostics
- Automatic readjustment via the controller
- Predictive error detection
- Longer maintenance intervals

More efficient operation
- Positioning of the sensors right where the action is
- Process monitoring, configuration and error analysis of the IO-Link devices via the controller
- Fast, high-performance data transmission
- Time-optimized machine processes
- High security against interference by means of digital communication
- A selection of sensors that is highly suited to the particular application because of the simultaneous use of binary, analog, and IO-Link sensors

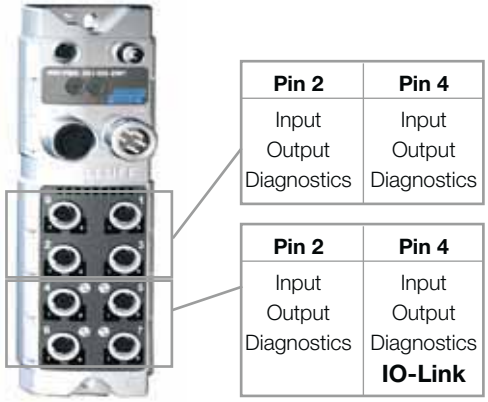
Highest machine availability
- Faster, error-free sensor replacement and prompt commissioning
- Automatic configuration of an IO-Link sensor
- Prompt format changes and recipe changes centrally via the controller
- Additional security from clearly identifiable IO-Link devices

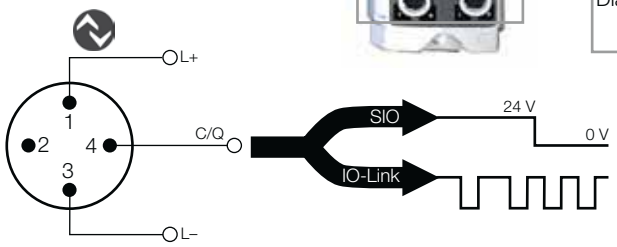
Network technology for flexible installation and reliable data transfer

Flexible installation of Profibus and Profinet with IO-Link

- Quick
- Low cost thanks to the use of economical components and standard cables
- Shorter downtimes during installation, maintenance and operation

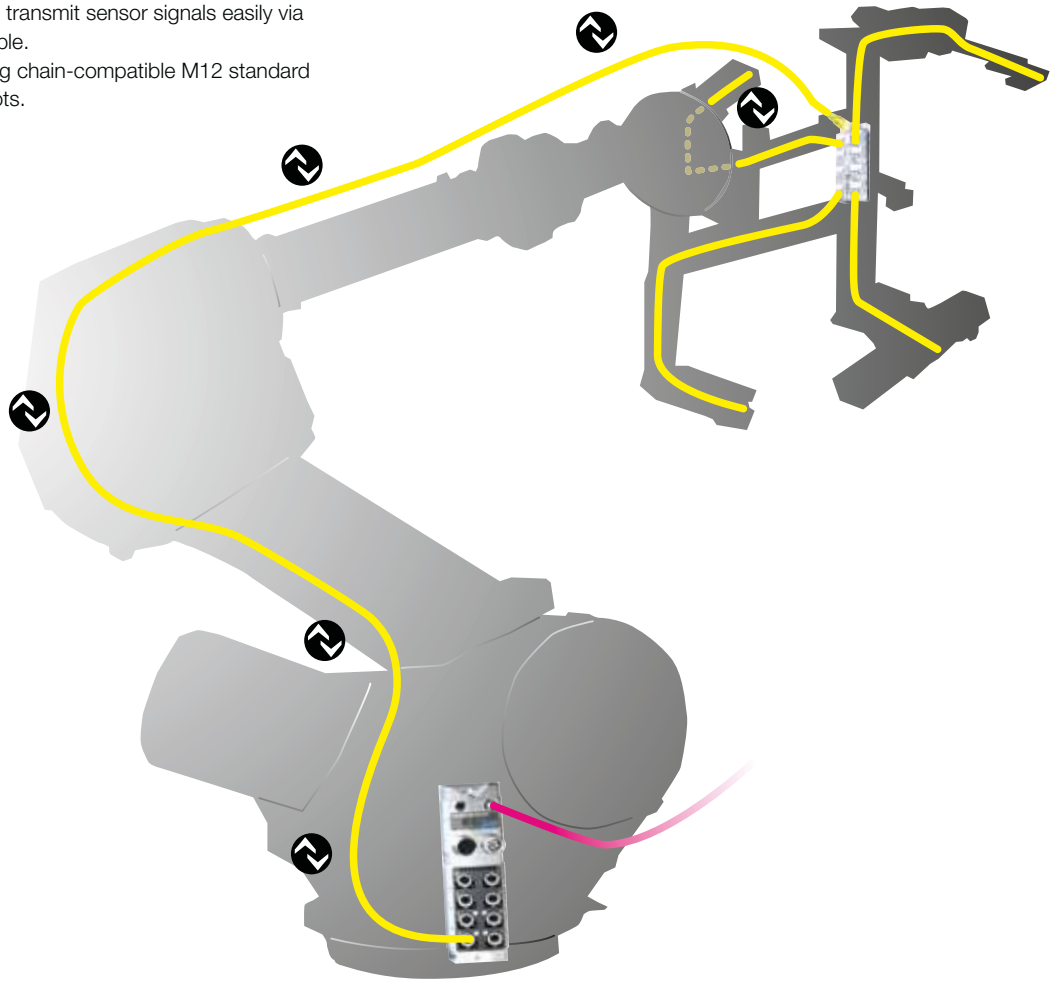
Depending on model type, the ports of the Balluff IO-Link distributor modules can be configured as a (diagnostic) input, output or IO-Link port. For each port, pin 2 or pin 4 can be used as input and output or for diagnostics.
IO-Link ports are labeled with the IO-Link symbol.





End-of-arm tooling
See the actual advantages of IO-Link in use

Modern robot systems require numerous sensors – particularly robot arms, which only tolerate lightweight sensors. High-performance Balluff sensor hubs prove their worth not only with their low weight, but also their ability to bundle and transmit sensor signals easily via IO-Link and a standard 3-core cable.
Balluff also offers economical, drag chain-compatible M12 standard cables BCC that are ideal for robots.



Network technology for reduced costs and greater efficiency

Balluff IO-Link sensor hubs save money

You save a great deal of money during the installation of IO-Link sensor hubs: 15 to 20% per input compared to Profibus and Profinet.

If you add the savings from Profibus and power cables, the cost savings are as much as 30 to 40%. One inexpensive M12 standard cable BCC suffices. Furthermore, sensor hubs need just one bus address to variably group sensor signals together within an area of 20 m and to ensure exceptional efficiency.

Cost-effective installation with high functionality

The high costs of field installations can be attributed to shielded cables and analog input cards. IO-Link sensor hubs not only solve the problem of fault-prone analog inputs, but also reduce wiring, testing and hardware costs. Thanks to simple plug-and-play of unshielded, economical M12 cables, you can conveniently set up the system in just one minute without so much as screwdriver. For a standard connection, you would need around 30 minutes. Clear IO-Link advantages that speak for themselves.

Modular expansion of fieldbus systems

With IO-Link modules, you can quickly and reliably simplify your network and save costs through reduced hardware, easy handling, high flexibility and greater efficiency.

Fieldbus modules

Reduce wiring costs
- Easily expand fieldbus modules with up to 8 sensor hubs. Everything according to your needs. You can connect up to 128 inputs/outputs per node and save costs

Simple integration
- Only the bus module needs an address

Flexible adaptation
- Whether input/output or IO-Link port – you configure the device yourself and design your system with complete flexibility

Compact and efficient
- Compact design with high function density: up to two sensors/actuators can be connected to each M12 connector

Sensor hubs

Simple integration
- Sensor hubs can be configured easily via fieldbus

Low space requirements
- Smaller in size than a bus splitter

Flexible adaptation
- Each of the 16 inputs can be configured as NC or NO

Ready to use immediately
- One sensor hub provides 16 additional inputs/outputs

Low costs
- Simple Plug-and-Play of inexpensive, industrial-quality, unshielded 3-pin M12 cables

The advantages for your network
- **Quick and easy network setup and modification**
- **Simple expansion of your network with the same number of fieldbus nodes**
- **Reliably reduce fieldbus nodes**

Simple handling, fast data, four variants

The space-saving M8 sensor hubs with IO-Link interface are the first choice wherever space is limited, because they offer up to 16 inputs in the tightest of spaces. And their low weight makes them recommended for weight-critical applications. M8 sensor hubs are easy to install and save time, because a 3-pin standard cable is sufficient for the connection. M8 sensor hubs are time and cost saving, even during maintenance and in system operation. This is because, like all IO-Link products, they ensure consistent diagnostics and can be configured centrally. M8 sensor hubs are also particularly fast. Transmission of 16 sensor signals, for example, takes just 2.5 ms. This ensures that the controller always receives current information. Each individual channel can be programmed to function as normally closed (NC) or normally open (NO), which allows the connection of complementary sensors (DESINA).

M8 sensor hubs with IO-Link port are available in four variants.

Fast, detailed diagnostics on individual channels

The lightweight, space-saving M8 sensor hubs with IO-Link port are also available with single-channel monitoring, which means that all the time and cost-saving benefits of IO-Link, including simple installation, central configuration and integrated diagnostics, are enhanced by this additional technical feature.

The single-channel monitoring function provides detailed diagnostic results extremely fast.

The single-channel monitoring function enables port-specific diagnostics of short circuits, overloading and cable breaks separately for each single channel. The diagnostic data is transferred with the process data, rendering acyclic services superfluous as a result.

The extra benefit:

Maximum diagnostic capability is achieved with minimal integration effort and diagnostics are performed in no time at all because the diagnostic data is included with the process data.

M12 sensor hubs, IP 67, 16 digital inputs/outputs

- Robust housing
- Powerful inputs
- Powerful outputs
- Extended temperature range

The metal sensor hubs in a robust housing are suitable for installation in extremely harsh industrial environments such as machine tool plants, steel works and so on. Based on M12 connectors, metal sensor hubs are simple to install and fulfill the requirements for cost-effective installation and maintenance.

Port-specific single-channel monitoring detects short circuits, overloading and cable breaks at the port and offers a completely unique degree of selective diagnostics for devices with this functionality. Each input can be programmed as normally closed or normally open using a parameter set, increasing the flexibility of your installation. Complementary DESINA sensors can also be connected to the DI16 sensor hub with ease.

The BNI IOL-302… version combines two modules in one while achieving the best functionality and flexibility. The maximum sensor load current is 500 mA, which is suitable for operating sensors with a high degree of consumption. If configured as an output, up to 2 A is available at the port. This is ideal for the use of hydraulic valves with a high consumption level.

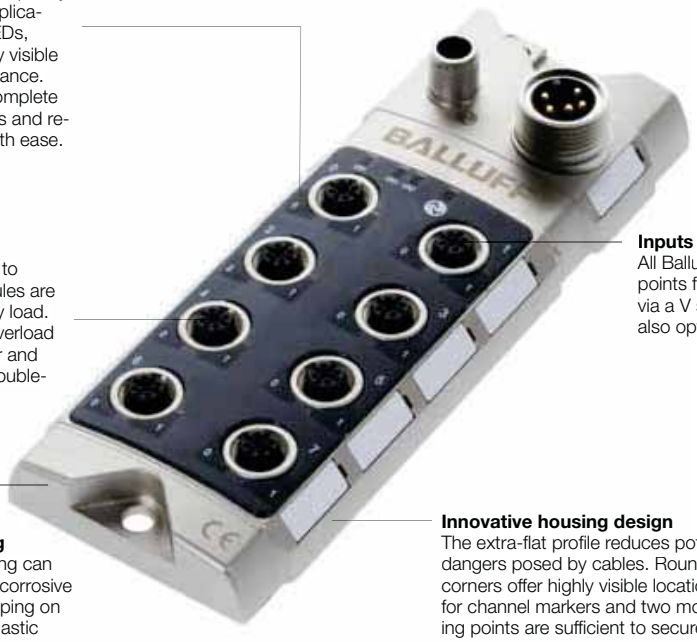
Clearly visible status LEDs
Low-quality LEDs that are often difficult to identify under demanding production conditions perform poorly when used in high-speed applications. Unlike Balluff status LEDs, which are large, bright, highly visible and provide maximum assistance. Balluff quality will help you complete setup and maintenance tasks and reduce machine downtimes with ease.

Powerful and safe outputs
With an output current of up to **2 amps**, Balluff output modules are capable of driving almost any load. Each output also offers an overload protection with LED indicator and a memory feature for easy troubleshooting.



Inputs with high density
All Balluff input blocks offer two input points for each connector, accessed via a V splitter. A DESINA output is also optionally available via pin 2.

Robust, full-metal housing
The fully encapsulated housing can withstand impacts, shaking, corrosive fluids, as well as people stepping on it and costs the same as a plastic housing.

Innovative housing design
The extra-flat profile reduces potential dangers posed by cables. Rounded corners offer highly visible locations for channel markers and two mounting points are sufficient to secure the robust metal housing.

Selectable IO-Link sensor hubs

Simple handling – lower costs – universal use
Selectable IO-Link sensor hubs from Balluff are a market innovation. The user can write and read his own, user-defined identification data. They are, therefore, particularly economical when it is necessary to encode tools. In addition, they are easy to use.

As an interface for interchangeable tools, they offer clearly calculable benefits:
- Fast, cost-effective installation using 3-core unshielded cables
- Quick, reliable format changes
- Centrally available data for continuous process control
- Simple tool replacement with hub and data
- Speedy setup
- Simple encoding for new tools via controller

Additional advantages
- Universal sensor hub in IP 67
- Each hub has 16 inputs with single-channel monitoring
- Convenient LED display of power supply and function
- Detailed diagnostics (overload, short-circuit or cable break)
- Reduced downtimes

Selectable sensor hubs from Balluff represent lower costs, less work and reduced idle periods and ensure the highest efficiency.

- Robust housing
- Powerful inputs
- Powerful outputs
- Extended temperature range
- Modules with reliable deactivation mechanism

If you wish to depict standard I/Os or safety I/Os in a fieldbus topology, the issue of safety becomes increasingly important for network/system integration.

Type BNI IOL-252/256 IO-Link actuator hubs fulfill requirements relating to the "passive safety" of outputs following safe deactivation in accordance with Machinery Directive 2006/42/EC, EN 954-1 category 3, EN 13849-1, EN 62061 SIL2.

The I/O block is divided into two galvanically isolated segments in order that two separately switching safety circuits can be implemented using one module.
The functions of the IO-Link system concept are extended considerably as a result. The IO-Link fulfills the requirements for a holistic approach and simultaneously reduces the number of components and guarantees simpler installation.

All hubs include four screw plugs and a label set.

The sensor hub is a particularly efficient complement to your machine installation. You can conveniently connect standard sensors using 8 or 16 standard inputs.
Each input can be programmed as normally closed or normally open using a parameter set. to increase the flexibility of your installation.

Complementary DESINA sensors can be easily connected to the DI16 sensor hub.
Communication with the IO-Link master takes place in COM2 mode (38.4 kbaud) on the standard 3-conductor cable and gives you a complete process representation in as little as 2 ms.

M12 sensor hubs, IP 67, 4-pin Analog

With the analog sensor hub, you can select from two additional variants with current and voltage interface, allowing you to connect non-IO-Link capable sensors with maximum reliability. Four existing analog channels can be supplemented with four additional dual-use standard input ports per IEC 61131. The analog channels have a resolution of 10 bits.

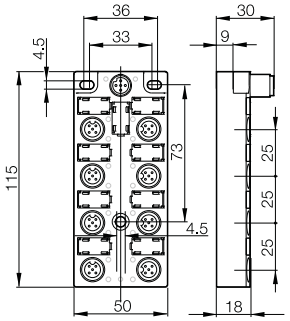
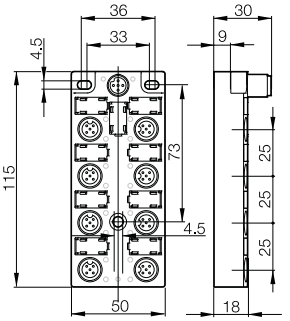
All hubs include four screw plugs and a label set.





- Every port can be freely configured and used as an output or input
- Inputs can be programmed as normally closed or normally open, depending on requirements, via the configuration
- Max. load current 350 mA per port
- Max. load current 1.2 A overall
- Connected to a 1.1 IO-Link master, they provide full 1.1 functionality, such as data storage and an expanded data frame

Simple handling, fast data, four variants

Space-saving M12 sensor hubs with IO-Link interface are the first choice wherever space is limited, because they provide up to 16 inputs in the tightest of spaces. And their low weight makes them recommended for weight-critical applications.

M12 sensor hubs are easy to install and save time, because a simple 3-pin standard cable is sufficient for the connection. M12 sensor hubs are time and cost saving, even during maintenance and in system operation.

This is because, like all IO-Link products, they ensure consistent diagnostics and can be configured centrally. M12 sensor hubs are also particularly fast. Sending 16 sensor signals, for example, takes 2.5 ms. This ensures that the controller always receives current information. Each individual channel can be programmed to function as normally closed (NC) or normally open (NO), which allows the connection of complementary sensors (DESINA).

M12 sensor hubs with IO-Link port are available in four variants.

M12 plastic sensor hubs now also have output functionality

The maximum 16 channels of the M12 plastic sensors are freely configurable (input/output) and fulfill the requirements according to cost-effective, flexible wiring. IO-Link 1.1 is connected using a 4-pin standard sensor cable.

Sensor/actuator hubs, IP 20

Easy installation with IO-Link under IP 20 conditions
The maximum 16 channels of the IP 20 IO-Link sensor/actuator hub are user-configurable (input/output) and meet the requirements for inexpensive flexible wiring.
The IO-Link is connected with a 4-pin standard sensor cable. The connection from/to the peripherals is by means of removable screw terminal blocks.

IO-Link up to the control panel
The compact size enables the simple and straightforward installation in control cabinets, control boxes and control panel housings. Simply snap the plastic housing onto a mounting rail according to EN 60175 – done.

IO-Link for integration in devices and device modules
Circuit board variants are available for the integration in spatially limited and complex functional units which can be integrated via spacing bolts.

Fork sensors BGL

In-process correction

Thanks to their band of light, fork sensors BGL can detect objects with absolute reliability while determining their position with pin-point accuracy. In-process correction is simplified substantially. Process reliability and product quality are significantly improved, thereby increasing efficiency.

Technical highlights

- Analog signal proportional to the skin depth of the object
- Constant value, even in the event of height variations
- Fieldbus connection with IO-Link

Color sensor BFS 26K

Robotics, automation, quality assurance and production processes are among the applications for color sensors. The color sensor **BFS 26K** is suitable for

- Quality assurance
- Selection of components
- Detection of cable wires

The BFS 26K uses white light and is especially insensitive to ambient light. This provides you with reliable data in challenging applications. Making your setting is incredibly easy since the controller handles data configuration via IO-Link.

Laser distance sensor BOD 63 M

When traditional sensing methods reach their technological and economic limits, laser distance sensors **BOD 63M** step in:

- For detecting small objects over long distances
- In difficult environments, such as high temperatures
- In robot cells

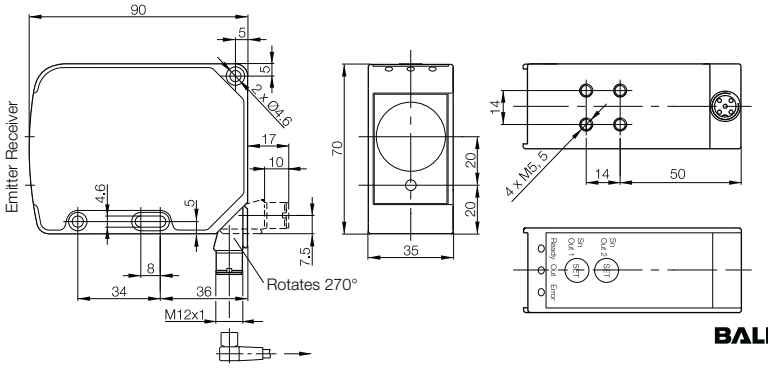
The BOD 63M with rugged metal housing has a working range of 200...6000 mm. Its data is transmitted via IO-Link mode, which makes setup and operation extremely easy: two teach-in buttons are provided for initiating startup. You can set both switching points directly from the controller, deactivate the laser and disable the buttons.

IO-Link

Series		**BOD 63M**
Output signal		**IO-Link**
Working range		200...6000 mm
Measuring range		5800 mm
PNP	**Ordering code**	**BOD0012**
	Part number	BOD 63M-LI06-S4
Supply voltage U_B		18...30 V DC
No-load supply current I_0 max.		90 mA
Settings		Teach-in
Switching points		2
Emitter, light type		Laser, red light
Wavelength		660 nm
Laser class		2
Light spot diameter		5 mm at 3 m 10 mm at 6 m
Resolution		1 mm
Gray value shift		≤ **1.5%**
Repeat accuracy		≤ ±4 mm
Temperature drift		≤ 1.5 mm/K
Max. characteristic deviation		± 1% of Wh
Switching hysteresis (in % of S_r)		0.3%
On/off delay		≤ 3.3 ms
Ready delay		≤ 20 ms
Switching frequency f		≤ 150 Hz
Power-on indicator		Green LED
Output function indicator		Yellow LED
Stability indicator		Red LED
Dimensions		90×70×35 mm
Connection		M12 connector, 4-pin
Housing material		Anodized aluminum
Optical surface		Glass
Weight		270 g
Degree of protection as per IEC 60529		IP 65
Polarity reversal protected		Yes
Short-circuit protected		Yes
Ambient temperature T_a		–10...+60 °C
Permissible ambient light		≤ 10 klx

IO-Link

Mode	COM 2
Transfer rate	38.4 kbaud
IO-Link process data length	3 input bytes/1 output byte
Value range analog	00C8 H...1770 H for WI...Wh
Diagnostics	Stability indicator
Parameter	Switching points, laser on/off, button disable



IO-Link

Inductive distance sensor BAW M18

Our inductive distance sensors can detect positions, distances and material variations with incredible ease.

Applications

- Distance sensing (even at high speeds)
- Measurement of film and sheet thicknesses
- Belt center measurement
- Measurement of metal strip widths
- Detection of surface waves
- Counting tasks
- Positioning
- Position checking
- Clamping status detection
- Selection of different sizes and materials

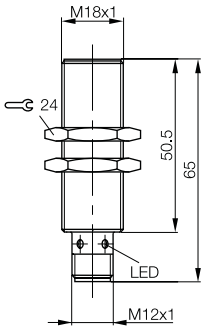
Features

- Contactless and absolute measuring principle
- Distance-proportional IO-Link output signal
- High repeat accuracy
- Optimal linearity
- Low temperature drift
- Measuring speed up to 40 m/s
- LED for indicating the working range
- Insensitive to contamination

Size		**M18×1**
Output signal		**IO-Link**
Installation type		Flush
Linear range s_l		1...5 mm
Ordering code		**BAW002F**
Part number		BAW M18MI-BLC50B-S04G
Supply voltage U_B		18...30 V DC
Residual ripple		≤ 15% of U_e
Rated insulation voltage U_i		250 V AC
Effective distance s_e		3 mm
Load resistance R_L		≤ 2 kΩ
Load resistance R_T		
No-load supply current I_0 at U_e		≤ 10 mA
Polarity reversal protected		Yes
Short-circuit protected		Yes
Ambient temperature T_a		–10...+70 °C
Repeat accuracy R_{BWN}		±8 µm
Non-linearity		≤ ±120 µm
Measuring speed		≤ 40 m/s
Response time		2 ms
Temperature coefficient TC	Typical	–2 µm/K
In the optimum range	Min.	+1 µm/K
From +10...+50 °C	Max.	–8 µm/K
Degree of protection as per IEC 60529		IP 67
Housing material		Nickel-plated CuZn
Material of sensing face		PBT
Connection		Connector
Recommended connector		BCCM415/BCCM425
Display		Out of range

IO-Link

Mode	COM 2
Transfer rate	38.4 kbaud
IO-Link process data length	2 input bytes
Value range	0000 H...03FF H



Inductive distance sensor
BAW Z01

The inductive distance sensor BAW Z01... is an accurate distance measurement system for detecting the positions of metallic objects.

- Absolute measuring principle and large measuring range
- Distance-proportional IO-Link output signal
- High repeat accuracy and precision
- Optimal linearity and low temperature drift
- Optimized housing design for clamping distance monitoring

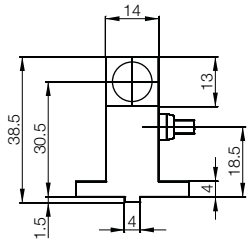
Application

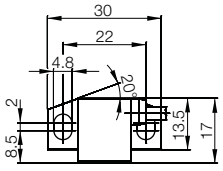
In addition to distance detection, thickness and width measurement, part inspection, parts identification and metering tasks, the main application area of the BAW Z01... is linear position monitoring of drive screws for

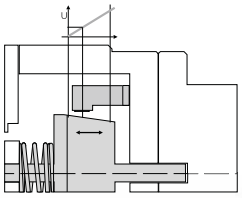
- Tools
- Workpieces

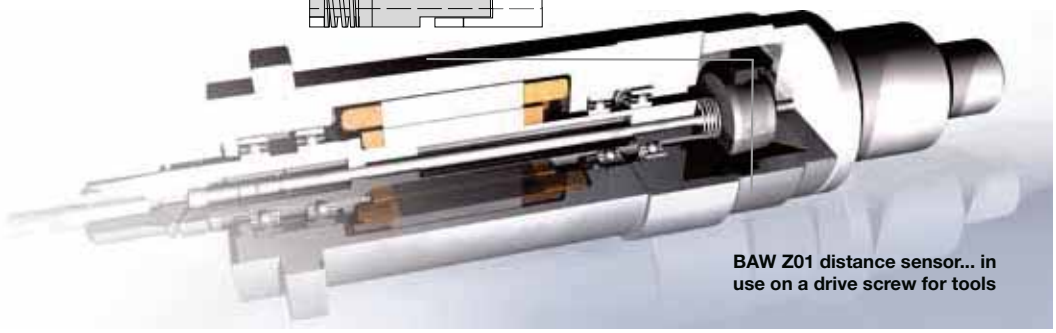
Size	**14×38.5×17 mm**
Output signal	**IO-Link**
Installation type	Flush
Linear range s_l	1...5 mm
Ordering code	**BAW003A**
Part number	BAW Z01AC-BLD50B-DP03
Supply voltage U_B	18...30 V DC
Residual ripple	≤ 15% of U_e
Rated insulation voltage U_i	75 V AC
No-load supply current I_0 at U_e	≤ 12 mA
Polarity reversal protected	Yes
Short-circuit protected	Yes
Ambient temperature T_a	–10...+60 °C
Repeat accuracy R_{BWN}	±10 µm
Non-linearity	≤ ±150 µm
Response time	5 ms
Degree of protection as per IEC 60529	IP 67
Housing material	Anodized aluminum
Material of sensing face	LCP
Connection	Cable

IO-Link	
Mode	COM 2
Transfer rate	38.4 kbaud
IO-Link process data length	2 input bytes
Value range	0000 H...03FF H









BAW Z01 distance sensor... in use on a drive screw for tools

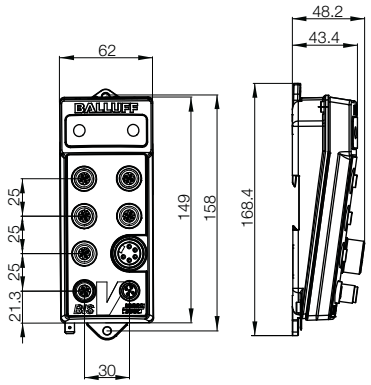
Industrial RFID system BIS V – The new generation for more efficiency

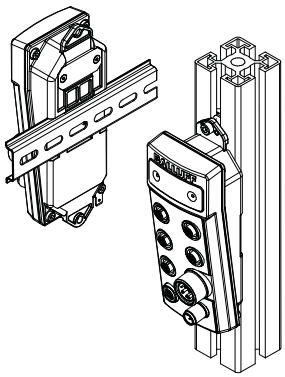
Typical applications for combining RFID processor units and sensors include identification tasks for material flow control in production systems, for conveyor systems in mechanical engineering, in assembly lines and electric suspension systems or in the entire field of intralogistics.

Industrial RFID system BIS V – The new generation for more efficiency

Description		BIS V RFID processor unit
Profibus	**Ordering code**	**BIS00T3**
	Part number	BIS V-6102-019-C001
EtherCAT	**Ordering code**	**BIS00U9**
	Part number	BIS V-6110-063-C002
CC-Link	**Ordering code**	**BIS010P – in preparation**
	Part number	BIS V-6111-073-C003
Power supply		24 V DC ±10% LPS Class 2
Residual ripple		≤ 10%
Power supply		≤ 2 A
Ambient temperature T_a		0...+60 °C
Degree of protection as per IEC 60529		IP 65
Housing material		Cast zinc
Weight		800 g
Connection H1 - H4		M12 socket, 5-pin, A-coded
Power connection		7/8" plug, 5-pin
Application interface		IO-Link 1.1, USB 2.0
Application with read/write heads		BIS VM-3… and BIS VL-3…

CC-Link and **EtherNet/IP** will be available as additional interfaces in the second half of 2013.





The compact EMC-protected metal housing with small dimensions (170×60×40 mm) is perfectly integrated and simple to mount. In control cabinets or in the field up to IP 65, on a top-hat rail, or on a profile.

The BIS V industrial RFID system was developed and qualified according to the principles of GAMP® 5. Please contact via e-mail for more information: **rfidpharma@balluff.com**

Industrial RFID systems BIS L
Read unit

The key areas of application for the non-contact **BIS L-409-045-001-07-S4** identification system are in equipment organization and production, e.g.:

- For controlling material flow
- In workpiece transport on conveyors
- For the detection of safety-relevant data

Information preprogrammed into data carriers can be read and transmitted using non-contact data recognition. This data is transmitted to the IO-Link master via the serial IO-Link port. BIS L-409-045-001-07-S4 is an autonomous unit. No cable-carried power source is required because the energy required is supplied by the integrated read head.

Description/dimensions	**40×40×120 mm**	
Output signal	**IO-Link**	
Housing material	PBT	
Antenna type	Round	
Ordering code	**BIS00CZ**	
Part number	BIS L-409-045-001-07-S4	
Power supply	24 V DC +10%/–20%	
Residual ripple	≤ 10%	
Power supply	≤ 150 mA	
Ambient temperature T_a	0...+70 °C	
Degree of protection as per IEC 60529	IP 67	
Mounting in steel	Not flush	
LED function indicator	Yes	
Connection	M12 connector, 4-pin	
Weight	220 g	

IO-Link Version 1.1		
Max. cycle time	8.8 ms	
IO-Link process data length	8 input bytes/8 output bytes	
Communication indicators	Green LED, pulsing

Mechanical multiple position switches BNS Series 100

Multiple position switches in accordance with DIN 43697 with safety switch positions as per DIN EN 60204-1/VDE 0113

- Positive-opening contacts and rigid plunger for additional security as per DIN EN 60204-1/VDE 0113
- Dual-chamber system with IP 67 degree of protection: wear-free membrane with hermetic sealing of plunger mechanism and switch chamber
- Maintenance-free, self-lubricating plunger guide with slide bearing

Multiple position switches with function indicator

- Function indicators for choice of three voltage ranges

Multiple position switches with wiper plate

- Increased function security under extreme conditions of use
- Wiper plate prevents plunger from sticking in the guide
- For use in wet areas with strongly adhering media

IO-Link

- Simple installation: with M12 connector
- No cable gland needed, factory sealed to IP 67
- Connect in just seconds
- High diagnostic capability through parallel processing of normally open/normally closed signals

Mechanical multiple position switches BNS Series 100

Type		**Series 100 multiple position switch**
Output signal		**IO-Link**
Plunger spacing		12 mm or 16 mm
Mounting and function dimensions		as per DIN 43697
Plunger style		Chisel (**D**), ball (**K**), roller (**R**), roller bearing (**L**) or chisel plunger with wiper plate (**E**)
Plunger material		Stainless steel, contact surfaces induction-hardened
Housing material		Cast aluminum, corrosion-resistant, anodized finish
Connection		M12 connector
Ambient temperature range		–5...+85 °C
Degree of protection as per IEC 60529		IP 67
With switch element		**BSE 30.0**
Ordering code		
Part number		BNS 819-...-...-100-**10**-FD-S4...
Wiring diagram, style		
Switch element		
Contact material		Silver, gold plated
Switching principle		Snap switch
Contact system		Dual changeover, one normally open and one normally closed, galvanically isolated.
Electrical data		See catalog "The Mechanical Line"
Mechanical data		
Plunger point to reference surface		8 mm
Switching point to reference surface		6 mm
Maximum plunger travel D, K, R, L		5.5 mm
Maximum plunger travel E		4 mm
Switching actuating force on plunger		Min. 20 N
Switching rate		max. 300/min
Startup speed	Plunger D	40 m/min
	Plunger E	30 m/min
	Plunger K	8 m/min
	Plunger R	20 m/min
	Plunger L	120 m/min

MICROPULSE®

Micropulse transducer BTL6-PF
Flat design for free-moving and guided encoders

- High power density saves installation space
- Adjustable measurement range for rapid commissioning
- Large distance between encoder and measurement system for easy installation

The structural design, high degree of protection and simple installation of Balluff Micropulse transducers in a profiled housing makes them an excellent alternative to linear transducers, such as potentiometers, glass rulers and LVDTs. The measurement section is protected inside an extruded aluminum profile.
A passive encoder with no power supply marks the measuring point on the measuring path without making contact. Measuring ranges between 50 and 4500 mm are possible.

For information on our micropulse transducers BTL and BIW, refer to our new catalog or visit our website at **www.balluff.com**

Micropulse transducer BTL6-PF
Flat design for free-moving and guided encoders

- Non-contact measurement of the measurement position
- IP 67, insensitive to contamination
- Wear-free
- Insensitive to shock and vibration
- Absolute output signal
- Max. resolution of 0.001 mm (depending on the processing electronics)
- Adjustable measuring range
- Diagnostic LED
- Free-moving and guided encoders
- Maximum distance of 15 mm between the position measuring system and the floating position encoder

Series	BTL6-PF
Shock load	50 g/6 ms as per IEC 60068-2-27
Vibration	12 g, 10...2000 Hz as per IEC 60068-2-6
Polarity reversal protected	Yes (up to 36 V)
Overvoltage protection	to 36 V
Dielectric strength	500 V (GND to housing)
Degree of protection as per IEC 60529	IP 67 (with IP 67 connector BKS-S... attached)
Housing material	Anodized aluminum
Housing attachment	Compression clamps
Connection	Connector

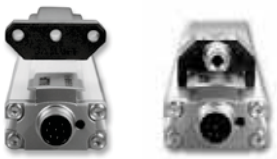
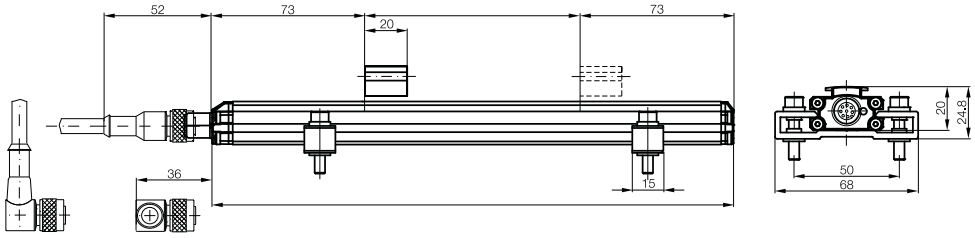
Standard nominal strokes [mm]	0050, 0100, 0130, 0150, 0175, 0200, 0225, 0250, 0300, 0350, 0360, 0400, 0450, 0500, 0550, 0600, 0650, 0700, 0750, 0800, 0850, 0900, 0950, 1000, 1100, 1200, 1250, 1300, 1400, 1500, 1600, 1700, 1750, 1800, 1900, 2000, 2250, 2500, 2750, 3000, 3250, 3500, 3550, 3750, 4000, 4250, 4500

Free-moving and guided encoders



Maximum distance of **15 mm** between the distance measurement system and the free-moving encoder.



Micropulse position measurer BTL6, profile PF IO-Link
Simple to configure, time-saving to install and bring into operation

MICROPULSE®

IO-Link

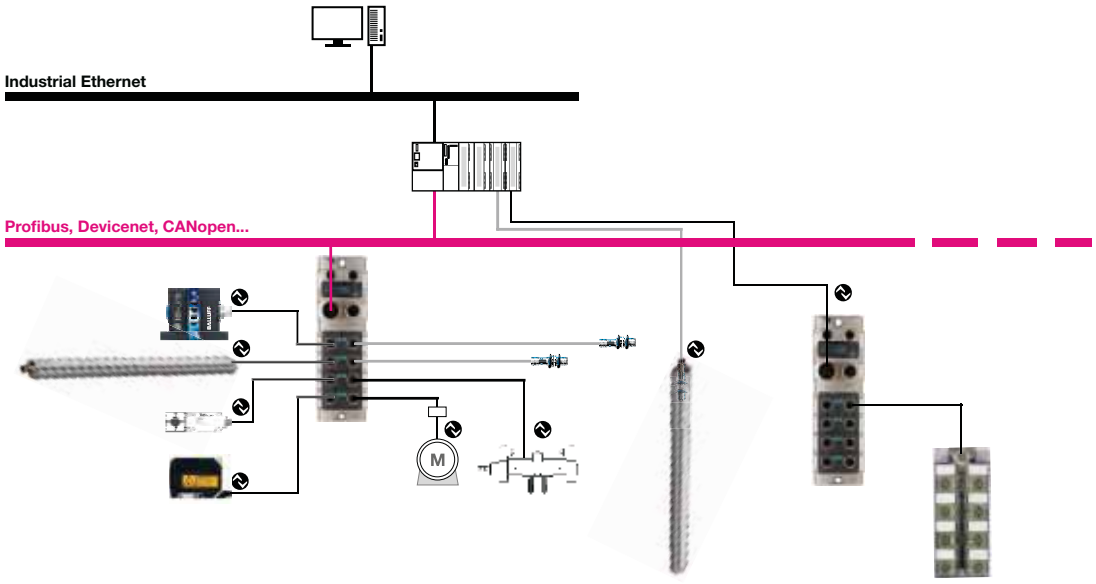
Contactless position measurement technology with IO-Link

Micropulse PF IO-Link is an absolute and non-contact position measuring system that continuously provides measurements in µm on a 1 ms cycle. These measurements are directly and digitally transmitted via IO-Link.

IO-Link is a point-to-point connection within any network. An IO-Link system consists of an IO-Link device such as a sensor or actuator, an IO-Link master and the wiring. Master modules are available with all current fieldbus protocols. The Micropulse PF IO-Link device is coupled to the master via a maximum 20 m long standard sensor/actuator line. Micropulse PF IO-Link operates using COM3 communication speed (230 kB), which achieves a process data cycle of 1 ms with a 1.1 master. Via IO-Link, the user interface can be mapped based on an IODD (IO Device Description) in the engineering system. Due to the continuous flow of information, all data is centrally and permanently saved, so that configuration is possible and reproducible at any time.

Your added value with the PF IO-Link profile

- Simple to configure, quick to install and bring into operation
- COM 3, 1 ms process data cycle possible, securely measure quick movements
- OTF, automatic configuration in running operation (on the fly)
- Continuous monitoring and diagnostics
- High transfer rate, quick process data cycle
- Cost-effective to wire with standard M12 cable connector
- Easy to integrate in the controller via standard IO-Link modules
- For harsh, industrial environments, use with Balluff IO-Link master component groups in IP 67



Micropulse position measurer BTL6, profile PF IO-Link
Simple to configure, time-saving to install and bring into operation

Micropulse position measuring systems enclosed in a PF profiled housing are non-contact, absolute measuring systems used for accurately measuring measurement paths. They are characterized by their very flat design and the robust structure with high IP 67 degree of protection. The current axis positions are "marked" by the position encoder magnets through the wall of the aluminum profile.
These position measuring systems tolerate a lateral offset as well as a height offset of up to 15 mm.

Advantages and characteristics of the PF profile

- Very flat design for simple pass over
- Non-contact measurement of the measurement position
- IP 67, insensitive to contamination
- Insensitive to shock and vibration
- Absolute output signal
- Measurement length up to 4570 mm
- 1 µm resolution
- ±200 µm linearity deviation
- Error and status LED

Ordering example:

Valve cluster switch for SMC VQC

New options in installation, diagnostics and activation

The BNI IOL-770-V06-A027 module connects process-related, installed valve clusters in the simplest way with the control level. As common with IO-Link, it is ready to connect and has a simple, 3-wire standard cable. Eliminates complicated parallel wiring and risk of mixing up cables. Because the "intelligence" is in the interface, nothing changes in the valve cluster or its individual valves.

The valve cluster activation combines 24 double valves with the control level. The module is connected to the VQC valve cluster types from SMC via the preinstalled, 26-pin round plug. This saves enormous wiring effort and reduces sources of error very substantially. A common 3-wire standard cable is docked on the other end of the screw-in M12 plug and assumes the complete electric control and the transport of all process and service data to and from the valve cluster.

The omission of high-effort, multiple wiring enables lean wiring concepts and saves space, time and money. The excellent diagnostics functions, such as short-circuit and coil break monitoring, provide for increased security in system operation.

IO-Link Version 1.1

Universal IO-Link interface

Universal IO-Link interface – unlimited options
Via the BNI IOL-771-000-K027 module, all devices are open for IO-Link with up to 16 inputs/outputs.

In a process-related manner, pumps, signal lights, control panels, valve clusters, switch units, transfer units, and much more are connected with the control level in the simplest way. The module provides both the fast IO-Link connection via the standard sensor line and an open cable with 10 or 18 wires, depending on the exact version.
With it, now any electric unit with up to 16 inputs/outputs can be connected to the control system via a standard sensor cable.

The omission of high-effort, multiple wiring enables lean wiring concepts and saves space, time and money.

The benefits to you
- Compact adapter housing for direct connection to different devices
- Via IO-Link, universal and fieldbus-independent
- Connection to control level with common sensor cable, reduces wiring effort
- Variants available with 8 or 16 input/output signals

Valve terminal connectors

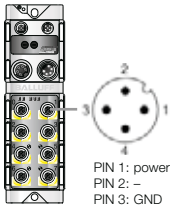
The advantages of IO-Link apply to valve terminal connectors as well. Our **BNI IOL-750** and **751** allow you to connect decentrally installed valve terminals and the control level with incredible ease.

Additional advantages

- Compact adapter housing
  Direct connection to the valve terminal using minimal space
- Flexibility
  Compatible with pin configurations from a wide range of valve terminals
- Optimized wiring
  Connects to the control level using standard 3/4-wire sensor cable
- Modular
  Control of up to 24 solenoids

Valve terminal connector

Use
Connection to valve terminal for power supply

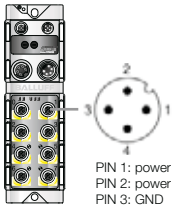


PIN 1: power supply and controller
PIN 2: –
PIN 3: GND
PIN 4: Q/C, IO-Link

Benefits
For all applications without separate deactivation of the valve power supply.

Power Aux valve terminal connector

Use
Separate deactivation of actuators, valve terminals and pneumatic system



PIN 1: power supply and controller
PIN 2: power supply and valve
PIN 3: GND
PIN 4: Q/C, IO-Link

Benefits
Pin 1: separate electrical operating voltage for controller
Pin 2: configured as an output and connected to actuator power supply U_a.

The actuator operating voltage can be switched on and off via the controller/PLC.

Preferred for 90% of all applications!

Converting analog signals into IO-Link signals and saving costs in the process
The number of analog data/information/signals is generally less than 10% of the signals generated in most systems and machines.

The connection and integration of analog input/output signals is associated with high costs due to the use of shielded cables on the installation side and expensive multi-channel input modules on the control side.

Our IO-Link analog plugs provide the fix. They provide considerable cost reduction potential for systems with limited analog value formation.
Expensive shielded cables are replaced with simple unshielded three-core cables. The signal neutrality of the IO-Link ports on the IO-Link master modules, together with the IO-Link analog plugs, ensures maximum signal variance. This makes "mixing" different input/output/current and voltage signals in one module possible.

Features
- Compact housing
- High, 14-bit resolution
- Extended temperature range
- Inputs and outputs

Ultrasonic sensors BUS _18M

With a housing length of only 41 mm, the new ultrasonic sensors BUS 18M are extremely compact. With their narrow sound cone and a blind zone of only 20 mm, they provide flexible application options. Two housing variants—straight and with a 90° angle head—are available, each with four scanning ranges up to 1.3 m.
The sensor family covers a broad range of applications—through three different output stages: a push-pull switching output or an analog output, available with 4...20 mA or 0...10 V.
The highlight is the complete support of the IO-Link interface. Via the switching output, the sensors can communicate with an IO-Link-capable controller or an IO-Link master.

The sensors can be synchronized with one another, so that they do not influence one another.

Features
- 2 housing variants
- Measuring range from 20 mm to 1.3 m
- Push-pull switching output
- Analog output 4...20 mA or 0...10 V
- Teach-in via control line
- Temperature compensation

IO-Link

IO-Link — the new standard

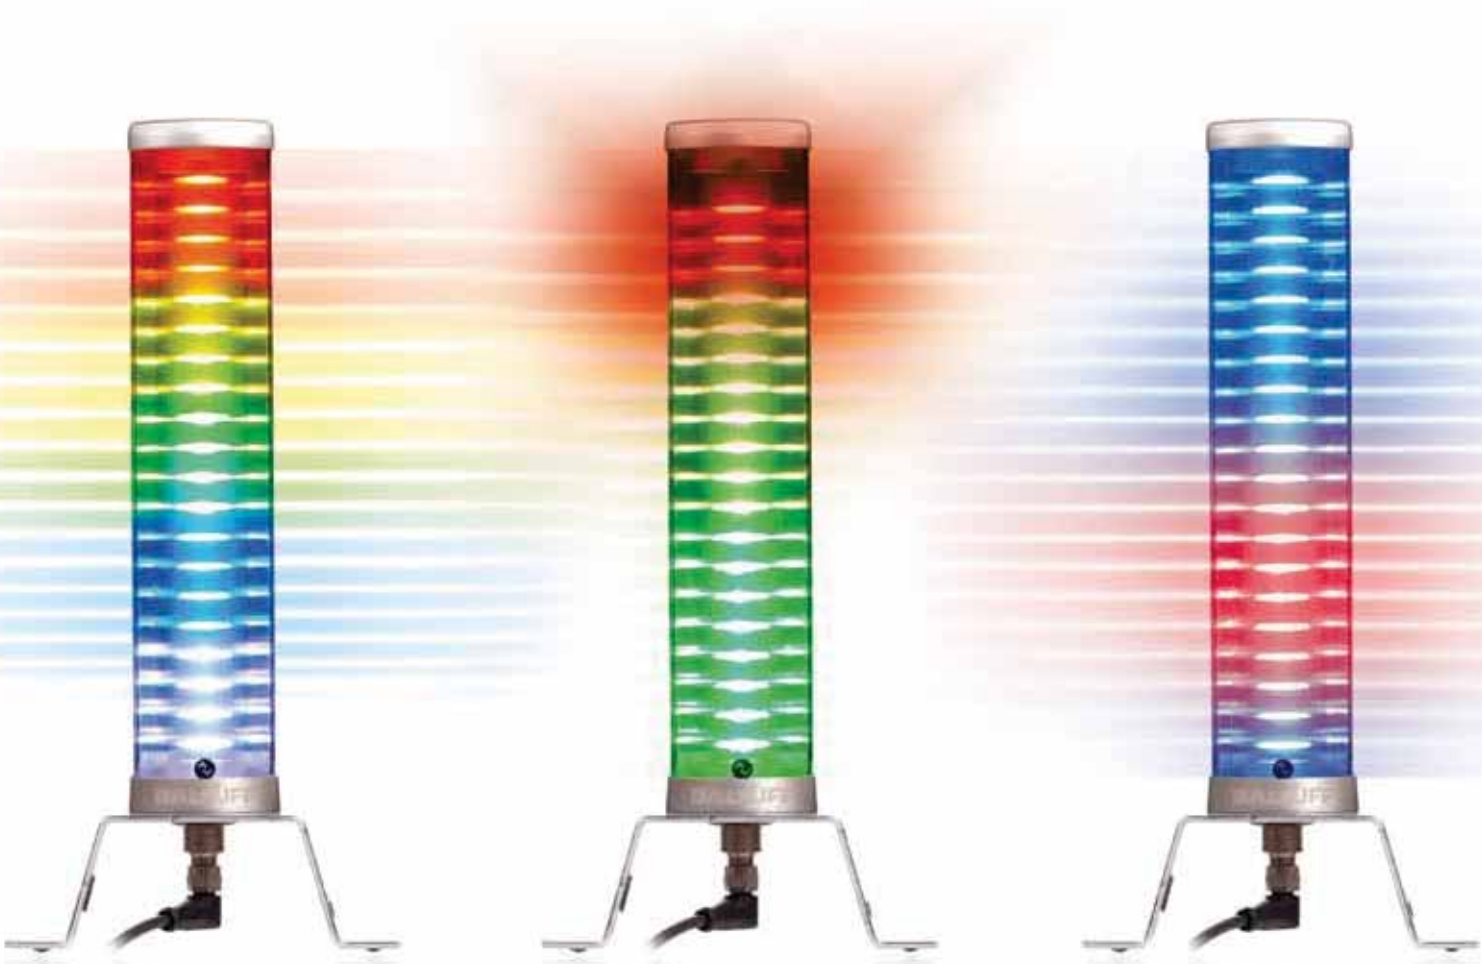
The IO-Link interface allows you to meet all of the prerequisites for gapless communication through all levels of the system architecture all the way to the sensor. Commissioning and maintenance of a machine are simplified and productivity increased.

SmartLight – its broad color spectrum signals all common physical variables
The first LED signal tower light with IO-Link interface uses its color spectrum to signal operating states. And it does this with many individually definable colors. The machine operator can have key and critical machine states displayed accurately as needed or as desired. And from its color scale, one can even read tendencies, patterns and trends of physical variables. Temperature statuses, levels of systems, or even the position of a slide over a position measuring system can be visualized on the tower light, which has up to 20 separately controllable LED circuits.

Colors can be set individually for maximum flexibility
Connection and installation are easy. All that is needed to screw them in is a four-wire sensor cable.
That already gives you maximum functionality, so that the LED signal tower light provides previously unimagined benefits.

With the IO-Link SmartLight, almost all common physical variables can be shown with a flexible color spectrum via multicolored LEDs. They are programmed via the PLC in an incredibly simple way using bit address assignments of the IO-Link address range. Different colors can be assigned with a few commands, without having to mechanically change the LED tower lights.

Naturally, our SmartLight allows you to implement all of the functions that could be displayed for the user on systems previously available as well. Thus, for example, it is possible to display different colors in different zones, whereby the signal light can be subdivided in up to 5 zones. Quite unlike the systems previously on the market, these colors and zones can be specified individually in terms of number, size and color definition, and can even be changed "on the fly" while the machine is operating.



Holder not included in the standard scope of delivery.

IO-Link SmartLight – the intelligent lamp
- The first LED signal tower light with an IO-Link interface
- Maximum flexibility
- Very easy to program
- Extremely fast and easy to install
- Different colors can be easily assigned without having to mechanically change the LED tower lights

The SmartLight has three central function modes for displaying different warning and indicator signals. These can be controlled using the process data and SPDU index.
- Segment mode: Display of different color signals in up to five different segments
- Level mode: Color gradient display for showing aspects such as levels or temperature values
- Running light mode: Automatic running light with freely configurable foreground and background color

USB IO-Link master

Test and configure IO-Link devices using the **IO-Link Master Tool**.

You can now operate an IO-Link, access process parameters and import all service parameters separately from the controller. The USB port ensures that connecting to a laptop is easy. Software simplifies operation.

The supply voltage for IO-Link devices is provided directly via the USB port. An external power supply supplies power if more is needed.

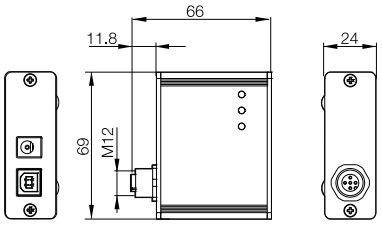
IO-Link

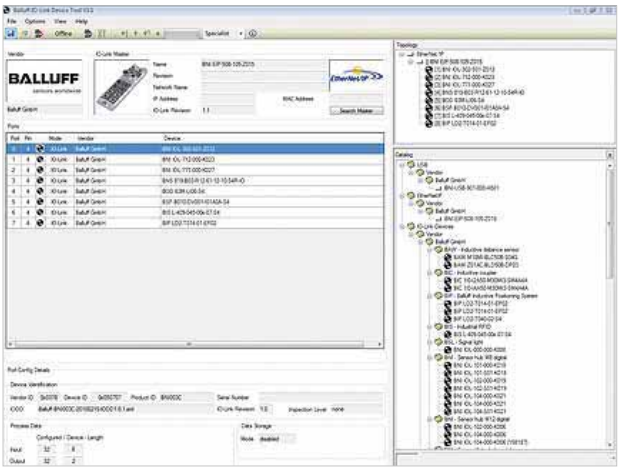
IO-Link	Master
Operating mode	SIO, COM 1, COM 2, COM 3
Communication indicator	Green LED



Device tool software available separately on request.

The **USB master box** ensures that connecting to a laptop is easy, allowing you to configure and run diagnostics on any IO-Link device very easily using a computer.

The **device tool software** simplifies operation. Supply voltage for the IO-Link devices is provided directly through the USB port. An external power supply is used if more power is needed.



Device tool software
Each IO-Link device delivery contains an IODD (Input Output Device Description). This electronic file can be used to import the data for the device into the **device tool software**. This means you can configure and run diagnostics on any IO-Link device.

The **device tool software** can be used to address any IO-Link device using the **USB master box**. But even the existing system infrastructure can be used for communicating using the device tool software.

If you are using Ethernet-based IO-Link masters such as Balluff Profinet or Ethernet/IP IO-Link masters, you can establish a direct UDP connection from the **device tool software** to those modules. This provides direct access to each individual IO-Link port and allows you to configure and run diagnostics directly on all of the connected IO-Link devices.

Dynamic Sensor Control

Dynamic Sensor Control: Condition monitoring

Reliable diagnostics are extremely important for highly dynamic machines. In the printing and paper machine industry, for example, the machine must react to faults within milliseconds.
Dynamic Sensor Control lets you recognize deviations in quality in the manufacturing process in real time, allowing you to implement corrective measures immediately.

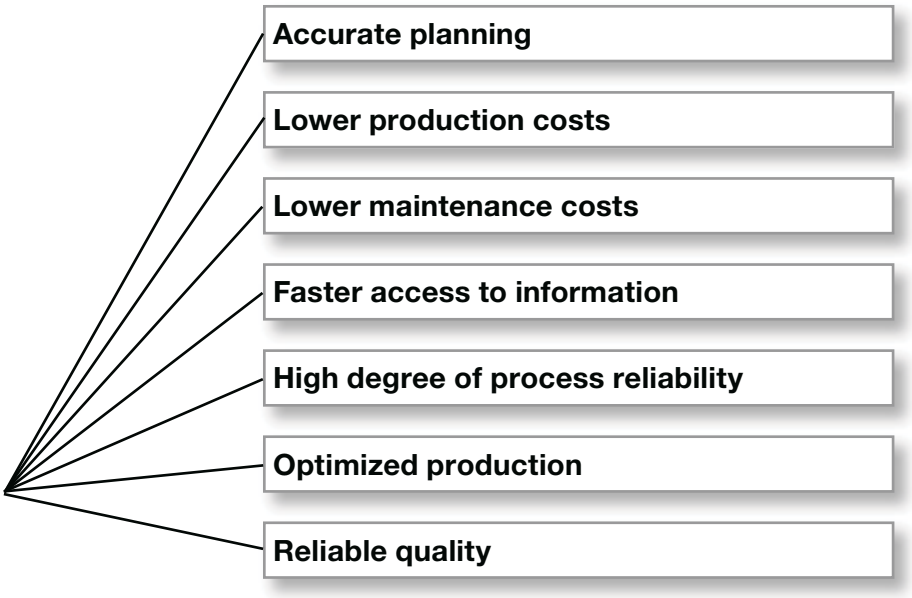
Dynamic Sensor Control



Reliable and timely detection of changing ambient conditions or machine states is often a decisive factor in being able to initiate repair actions in the production process in a timely manner. Dynamic Sensor Control (DSC) provides high-quality information in addition to the sensor function. This lets users immediately detect such aspects as whether detection ranges remain optimally configured or whether increasing contamination has started impairing the accuracy of a sensor, and does so during ongoing operations. This enables immediate correction.
DSC increases the productivity of systems and machines.

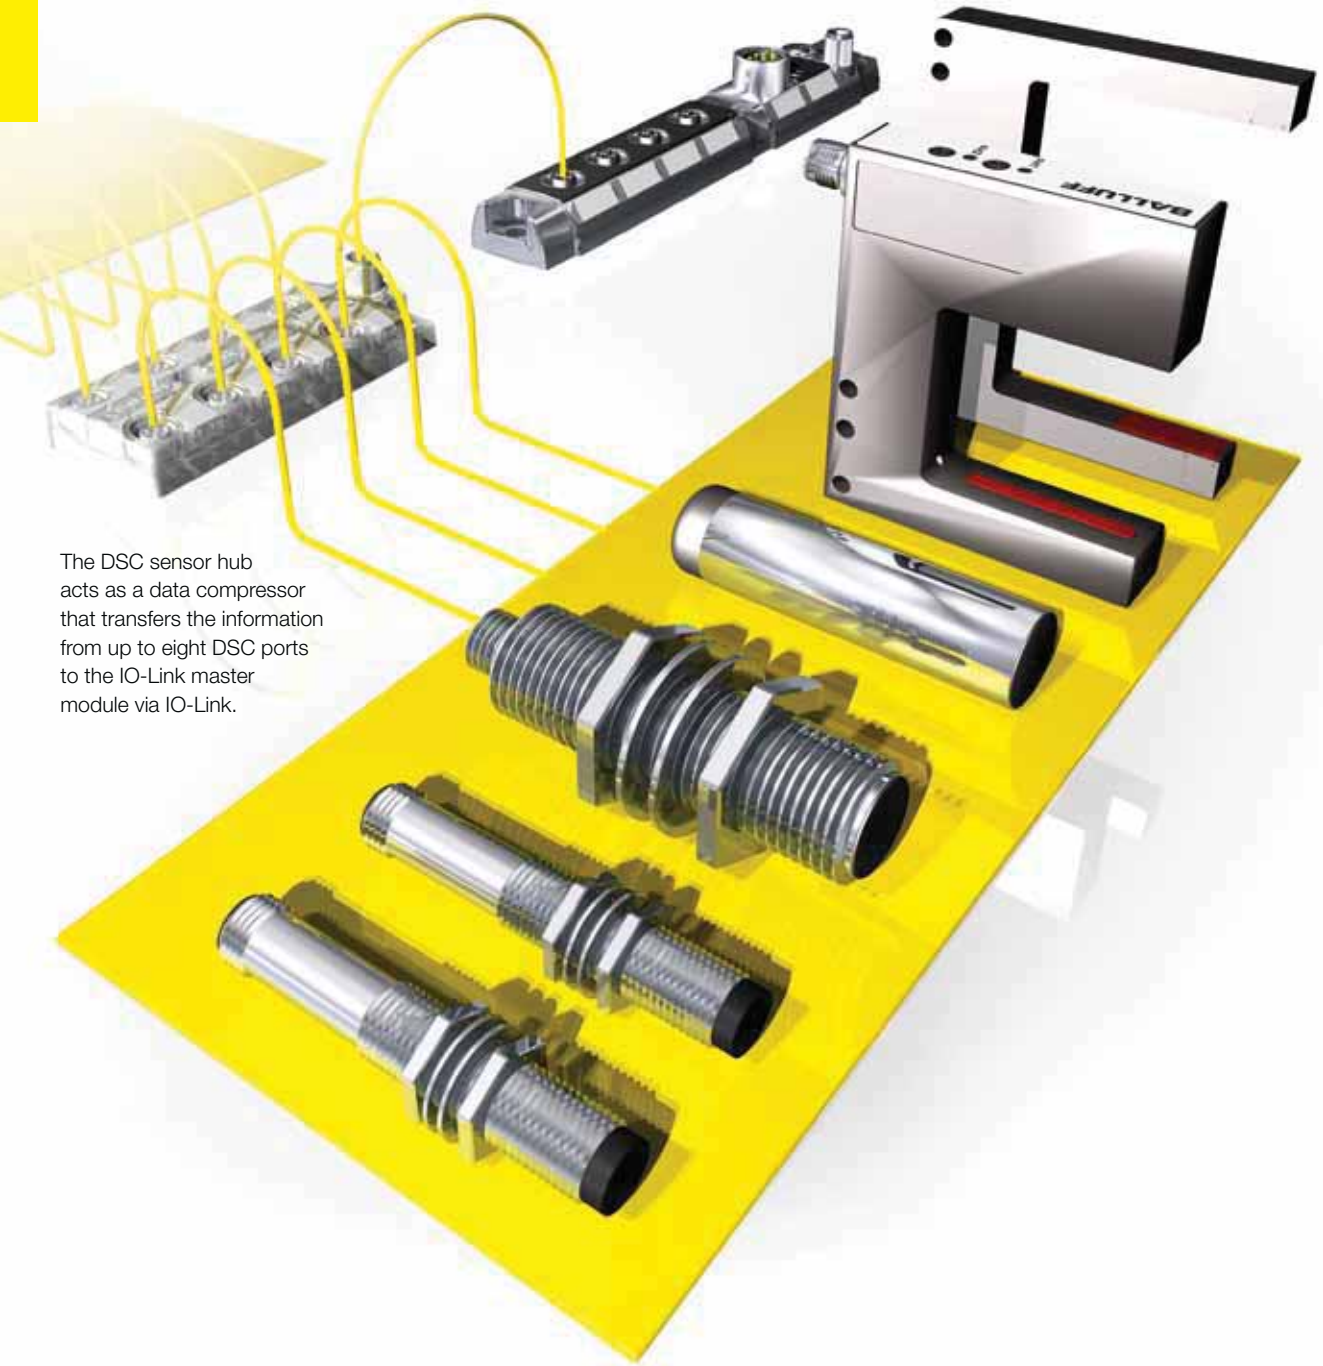
Dynamic Sensor Control
Condition monitoring

This compact IO-Link master module is equipped with four IO-Link ports that allow the connection of up to 32 DSC-compatible sensors in combination with DSC sensor hubs.



The DSC sensor hub acts as a data compressor that transfers the information from up to eight DSC ports to the IO-Link master module via IO-Link.

Capacitive Ø 20 mm sensor with Dynamic Sensor Control

Ordering code	BCS0001
Part number	BCS 20MG10-XPA1Y-8B-03
Switching type PNP complementary	■
Rated switching distance s_n	10 mm
Size, installation type	Ø 20 mm, flush
Supply voltage U_B	10...30 V DC
Function indicator	Yes
Degree of protection as per IEC 60529	IP 63
Approvals	CE
Housing material	V2A, EP
Connection	3 m cable PUR, 3×0.25 mm²

Inductive M12 sensors with Dynamic Sensor Control

Ordering code	BES02MC	BES02M5	BES02M8

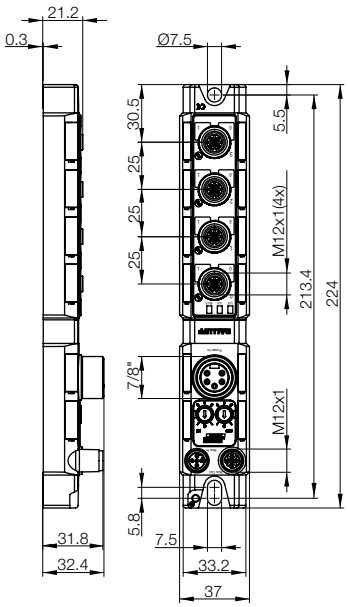
Fieldbus	Profibus DP
Version	4× IO-Link ports or 4 standard I/O ports
Ordering code	**BNI000Z**
Part number	BNI-PBS-507-000-Z011
Supply voltage U_B	18...30 V DC
Connection: Fieldbus	M12, B-coded
Supply voltage connection	7/8"
Connection: I/O ports	M12, A-coded, female
No. of I/O ports	4
Number of inputs	Max. 8
Number of outputs	Max. 8
Configurable	Yes
Max. load current, sensors/channel	200 mA
Max. load current, output	≤ 1.6 A
Total current $U_{Actuator}$	≤ 9 A
Total current U_{Sensor}	≤ 9 A
Degree of protection as per IEC 60529	IP 67 (when screwed into place)
Operating temperature T_a	–5...+55 °C
Storage temperature	–25...+70 °C
Dimensions (L×W×H)	224×37×32 mm
Housing material	Nickel-plated GdZn

IO-Link

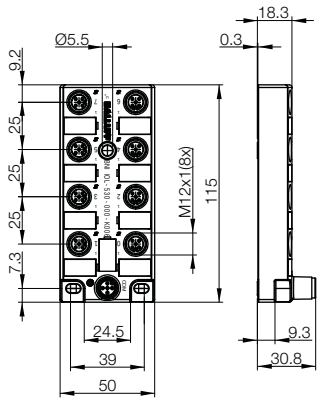
No. of IO-Link ports	4× master
Operating modes (3-wire)	SIO, COM 1, COM 2, COM 3
Communication indicator	Green LED
Error indicator	Red LED
Max. load current for IO-Link device	≤ 1.6 A

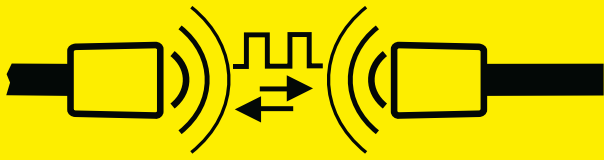


IO-Link	Device
Version	8× DSC or 8× I/O ports
Ordering code	**BNI002Z**
Part number	BNI IOL-530-000-K006
Supply voltage U_B	18...30 V DC
Connection: IO-Link	M12, A-coded, male
Connection: I/O ports	M12, A-coded, female
No. of I/O ports	8
No. of DSC ports	8
No. of digital inputs	8
Max. load current, sensors/channel	200 mA
Total current U_T	< 1.2 A
Degree of protection as per IEC 60529	IP 67 (when screwed into place)
Operating temperature T_a	–5...+55 °C
Storage temperature	–25...+85 °C
Dimensions (L×W×H)	115×50×31 mm
Housing material	PC

IO-Link

Operating mode	COM 2
Parameter	– Enable/disable DSC – DSC sensitivity – Diagnostics reset – NC/NO





Inductive Couplers

Inductive Couplers

Balluff inductive couplers BIC are extremely suitable for the quick connection and disconnection of modules. New requirements can be implemented within a very short period and with maximum flexibility.
BIC couplers are installed immediately via plug-and-play, making retrofitting extremely simple. Even maintenance is significantly easier since cable breaks and mechanical wear are a thing of the past. The units can be disconnected quickly during maintenance. Power and signals are transferred reliably over an air gap.

Inductive Couplers
Contents

Inductive Couplers
Overview

Fixed wiring is a detriment when sensors are intended to follow the movements of a machine, as is the case in flexible automation. This puts heavy strain on contacts and cables.

These kinds of problems are a thing of the past thanks to inductive couplers BIC; signals and power are transmitted over an air gap without any contact.

System components
- Sensor – mechanical, inductive, optical, magnetic or capacitive
- Remote – for connecting the sensors to the inductive system, installed on the mobile side
- Base – connects the system to the controller: transmits power to the remote, receives the status information from the sensor and relays it to the controller

Power only
Power transmitting units for actuator systems, loading units or just supplying power

Unidirectional systems
- Signal transfer from sensor to controller
- Up to 16 sensors are transmitted depending on the system
- Special systems for analog signals and PT100 measuring sensors

Bidirectional systems
These systems transmit the signals in both directions.

Active unit
- Mobile interface for the IO-Link environment
- This allows the use of IO-Link as the transmission protocol for all IO-Link-capable systems

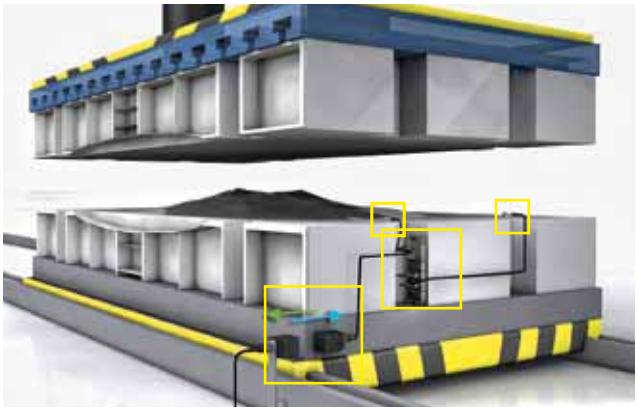
Load carrier:
BIC as plug replacement
Sensors mounted on moving load carriers detect the presence of components.
The inductive coupling system takes over supplying power for the sensors and transmitting sensor signals, making mechanical contacts superfluous.



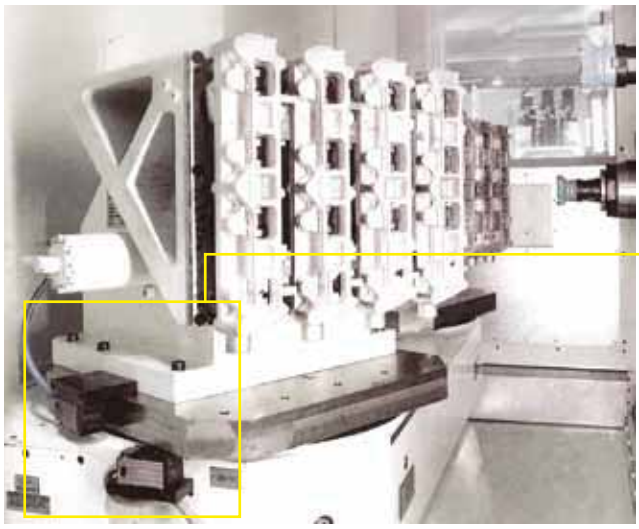
Change tools:
BIC as plug replacement and for tool identification
Sensors attached to change tools detect the presence of materials. The sensor signals are transmitted to the controller via the inductive couplers, thereby ensuring correct positioning of the material.
In conjunction with a networking interface BNI, tools can also be identified.
BIC couplers enable automatic tool changing since manually connecting mechanical connectors is unnecessary.

Robotics:
BIC as plug replacement on a robot's tool changer
Inductive couplers BIC make mechanical plug-in contacts unnecessary because the signals can be reliably transmitted over an air gap without contact. This ensures freedom from wear, guarantees tools are changed quickly and provides a large degree of flexibility and high dynamic response.

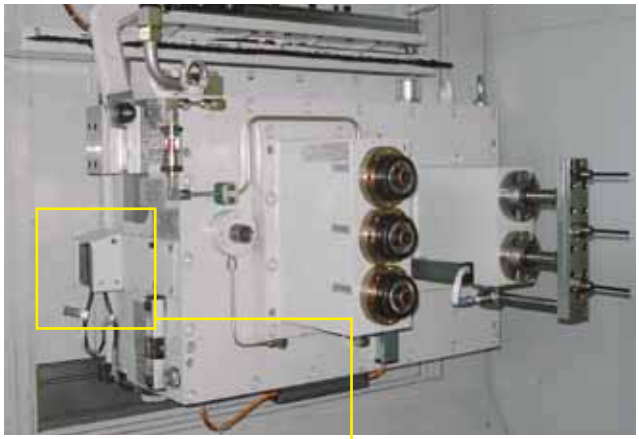
Rotary table:
BIC as replacement for slip rings and cable routing
Slip rings or cable connects are subjected to mechanical stress whenever sensor data has to be transmitted from a moving part to a stationary part (such as a turntable). Wear results in failures and expensive downtime.

Wirelessly operating BIC systems make slip rings and cable connections unnecessary on a rotary table. They transmit sensor signals and power for sensors.

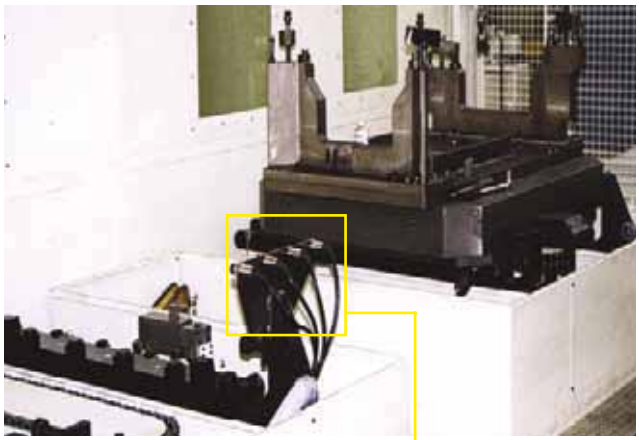
Machining center



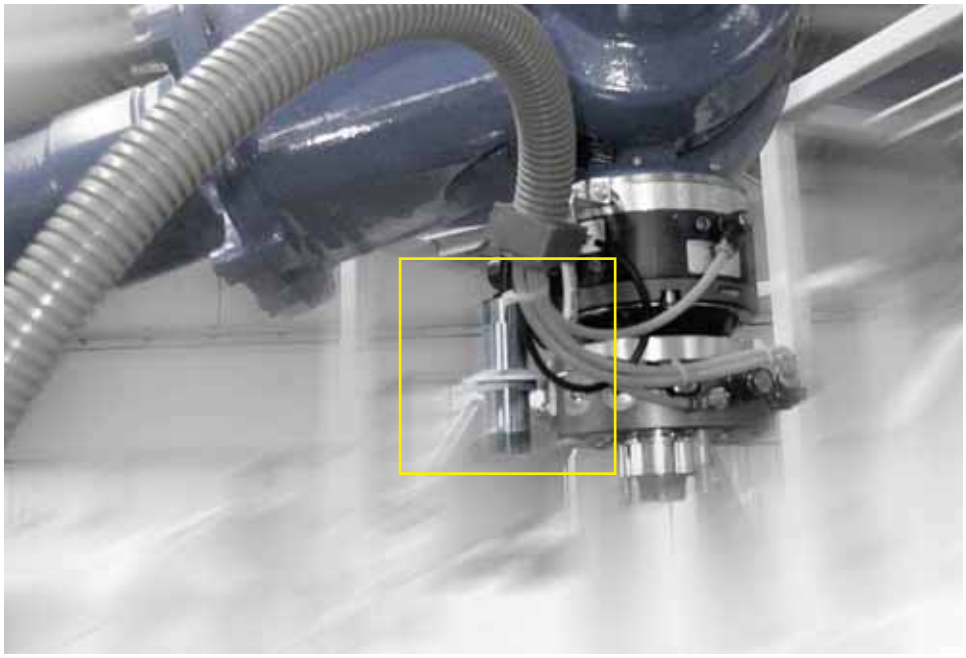
Monitoring clamping jaws in the working area of a 2-spindle machining center.
Clamping jaws can also be monitored during machining using inductive couplers BIC. On a swinging table with two rotary indexing tables, 8 sensors on each indexing table transmit information without contact. Power for the sensor function is also provided inductively. The separable inductive coupling of power and signals also guarantees greater flexibility in machining centers.



Reliable workpiece position detection in machining centers at MTU Friedrichshafen
Inductive couplers BIC are used for independent workpiece detection on the pallet to deal with the variety of parts. Up to 16 sensors detect the positions and recognize the part to be machined based on certain features. After loading, the pallet is conveyed into the machining area where the recorded information is used to execute the machining program.



Checking slide settings on an interchangeable drill head
The BIC system supplies power to inductive sensors and sends back sensor information.
When the drill head is automatically changed, no connections need to be disconnected. The system operates using induction, allowing it to be disconnected quickly.



Robot gripper
The sensor determines whether the gripper has collected the workpiece. The switching state of the sensors is transmitted without contact.

Flexible production – wireless sensor/actuator connection for greater freedom of design
High-speed tool changes require signal transmission without contact. Inductive coupling with IO-Link is ideal for this task. When a tool is changed with BIC, no mechanical parts are required for signal contacting. There is no wear and no bad contacts.

Contactless transmission ensures a high number of cycles
Robots are indispensable for the precision loading and unloading of parts in machining centers. The high movement speed of the gripper often leads to problems with the sensor cabling. Federal Mogul Friedberg GmbH has taken on the problem and installed a radial BIC system at the interface between the gripper and robot arm. The energy for powering the sensors as well as the position information is inductively coupled.
This concept ensures reliable transmission, whether stationary or in motion.

Inductive Couplers
Bidirectional
Four sensor signals and four actuator signals

BIC bidirectional is the coupler system for four sensor signals and four actuator control signals.
The bidirectional system transmits signals inductively in both directions. The remote unit can now be used for controlling individual sensors and clamping units.
From the stationary side base, up to four signals can be transmitted, and four channels can be independently controlled.

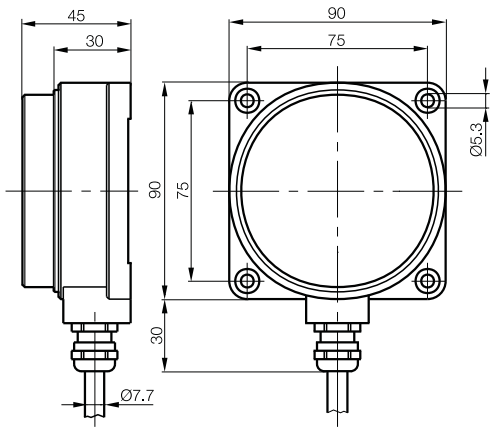
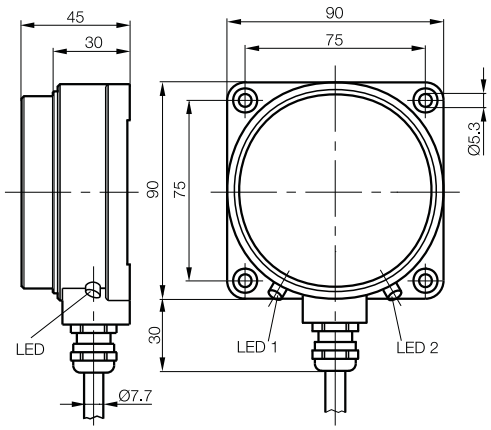
The remote is attached on the moving side where the sensors and actuators are located.

The base is connected to the power supply and the controller on the stationary side.





Radial system for up to eight sensors

No slip rings necessary
The modularly designed radial BIC system enables contactless transmission of signals and power during rotation. The switching states of up to 8 digital sensors can be transmitted to a stationary base from rotating shafts, axes and tables. Transmission is always reliable even under the hardest conditions, regardless of speed. Radial BIC systems do not require any service or maintenance work since there is no mechanical contact.

- Intelligent, compact and interference-free
- Contactless, making it wear-free
- Connection for up to 8 sensors
- Power supply for sensors already integrated
- Plug-and-Play: plug in, switch on and evaluate data

You can find special accessories for photoelectric sensors, such as **reflectors, apertures, lenses, filters and deflection heads,** in our **Object Detection** catalog.

More mechanical accessories: You can find a large selection of mounting components of all types, such as clamping holders, mounting brackets and the Balluff mounting system BMS, in our **Accessory Product Line** catalog.

Radial system for up to four analog signals 0...10 V DC

Non-contact inductive energy and analog signal transmission for applications where cables are not permitted
Transmitting sensor signals from rotating machine parts or change tools and transmitting power are often a difficult task for design engineers.
This is because, in addition to a reliable connection with high availability, establishing a connection for transmitting power and data is frequently required. Conventional solution approaches are usually based on solutions prone to contact and wear, such as slip rings or mechanical connectors.

The radial BIC system from Balluff is the contactless and wear-free alternative. Thanks to the radial and axial coupling options, it opens up entirely new possibilities for users to transmit up to 4 independent analog signals.
The generously allotted supply of power ensures contactless signal transfer of inductive distance sensors BAW or magneto-inductive displacement sensors BIL and other analog systems. This allows even the transducer series BTL with an analog output to be connected without restriction.

For one analog displacement sensor 0...10 V DC

Remote – detect moving components

Digital signals are not the only signal that can be transmitted inductively, now analog signals can be processed as well. The power for the analog displacement sensor from the BAW series (voltage output of 0…10 V DC) is provided inductively and, like the sensor's analog output signal, transmitted without contact.

This enables the use of BAW sensors is places such as moving machine tool components. The remote built into a rotating shaft reliably transmits the information to the base regardless of the rotational speed.

Remote – non-contact transmission of temperature values

Thermal remote systems are compatible with PT100 thermocouples for sensing temperature on moving components even while they are being processed. The thermocouple detects the temperature of the object and changes its resistance value, which is processed by the remote. The digitized information is passed to the base. The latter converts the digital values into an analog signal (4...20 mA) and provides it to the external controller.

Compatible PT100 thermocouples

If required, thermocouple with temperature measuring ranges of 0...+100 °C and 0...+300 °C used in conjunction with the corresponding remote.

Remote

Ordering code	Part number	Temperature measuring range
BIC0041	BIC 2I0-R1002-M18MF2-BPX03-050	0...+100 °C
BIC004C	BIC 2I0-R3002-M18MF2-BPX03-050	0...+300 °C

Rugged splitter boxes for easily connecting the sensors to the remote with cable outlet. The remote sensor is connected using a terminal block with spring clamps – no screws required.
The sensors are connected using standard M12 connectors.

Rapid disconnection of power and signals

For maximum flexibility – Non-contacting power transmission and reliable data transfer
Inductive couplers are at their best whenever modules that route signals have to be able to be disconnected quickly and connected correctly. The ability to disconnect units quickly allows you to implement new requirements with the utmost flexibility in almost no time. Power and signals are transmitted over the air gap reliably, quickly and with exceptional performance.

Retrofitting is simple: BIC is plug-and-play. Your maintenance costs are reduced to a minimum. Cable breaks and mechanical wear are a thing of the past.

The IO-Link connection allows up to 16 sensors per system and lets you connect to the bus environment.

The best solutions for the application can be selected from various performance classes in a compact design.

Inductive Couplers
Power only

- Simple connection, quick startup
- Wear-free
- Robust, even in harsh environments

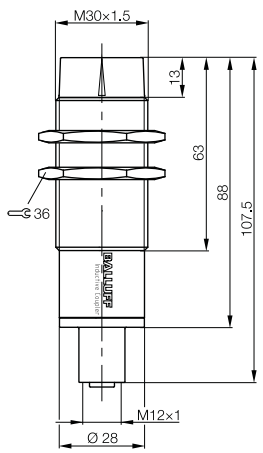
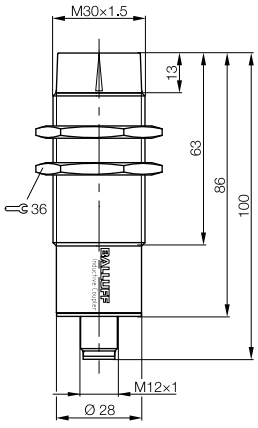
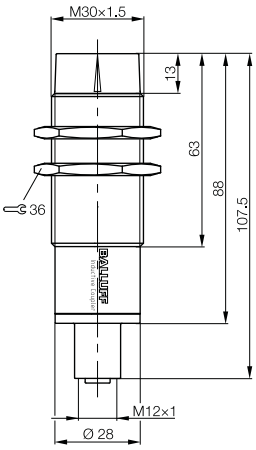
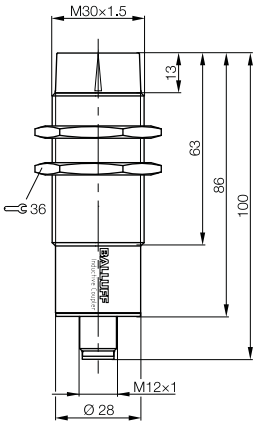
Take advantage of the IO-Link connection, which allows up to 16 sensors per system and lets you connect to the fieldbus environment.









IO-Link unidirectional in 40×40 mm Unicompact housing

IO-Link unidirectional in 40×40 mm Unicompact housing
The IO-Link interface guarantees simple installation IO-Link can be wired quickly and the new housing concept also reduces interfering variables.
Inductive couplers make mechanical plug-in contacts unnecessary because the signals can be reliably transmitted without contact via an air gap. This ensures freedom from wear, rapid format changes and great flexibility. This makes IO-Link unidirectional in the compact 40×40 housing ideal for robotics coupling.

- No mechanical wear
- Maintenance-free
- Increased system availability
- Fast replacement of change tools
- Simple system design
- Quick wiring for tools

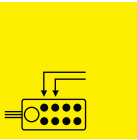
Passive Splitters



Passive Splitters

Balluff passive interface BPI units connect sensors and actuators to the controller. They are especially ideal for harsh conditions and come highly recommended for situations where coolants and lubricants are used. Metal screw inserts ensure optimum media resistance. A fully enclosed housing provides a higher enclosure rating as well as better shock and vibration resistance characteristics. Though excellent design, Balluff passive interface BPI units can be integrated into all systems and machines. Metal screw inserts also ensure improved fit of the connectors.
The BPI can be flexibly mounted on all standard profiles and base plates and the mounting bore holes are centrally positioned. Additional mounting bore holes allow you to mount the BPI on its side. Flexible mounting is supported by the highly visible LED.
The full line of Balluff products includes all styles.

Balluff BPI passive interface— a multi-talent, even under demanding conditions

- Outstanding design
- Fully potted housing
- High shock and vibration ratings
- Metal screw inserts
- Flexible mounting options

Product topology

Passive splitters
Lightweight and compact M8 and M12 plastic splitter boxes are used wherever space is limited or moving machine members are present. The plastic splitters come either complete or in modular form.

Features
- Customized, versatile and light, usable as M8 or M12 splitters
- Quick assembly and disassembly for transport
- Potential isolation using jumpers

Typical applications for the plastic version
- Assembly and handling machines
- Packaging technology
- Specialty machine construction

	Conventional splitter boxes or wiring directly in the switching cabinet	Use of passive splitter boxes	
Assembly time			Machines, systems and connectivity components are divided into transportable sections and dismantled prior to delivery. **During commissioning, installation times are normally reduced by 60%.**
Info/ Feedback			LEDs indicate the status of the system. **Fewer qualified employees are required.**
Dimension			**Usually smaller sizes.**
Connection technology			**The plug-in solution provides clear advantages.**
Complexity			Connectors, sensors and other actuators are easy to replace. **Downtimes are reduced.**
Service personnel			**Fewer qualified employees are required to maintain the machine.**
€			**You can significantly reduce your installation and maintenance costs with Balluff splitters.**

Passive Splitters
M12, 4-pin, with cap and cable

Passive splitters
The passive interface BPI connects sensors and actuators to the controller. It is especially ideal for harsh conditions and comes highly recommended for situations where coolants and lubricants are used. A fully enclosed housing provides a higher enclosure rating as well as better shock and vibration resistance characteristics. Though excellent design, the passive interface BPI can be integrated in all systems and machines. The BPI can be flexibly mounted on all standard profiles and base plates and the mounting bore holes are centrally positioned.
Flexible mounting is supported by highly visible LEDs. Setting up and adjusting your machines and systems is much easier as a result.

Areas of application
Passive splitter boxes are ideal for use in decentralized assembly and handling machine installations, packaging technology or special purpose machine manufacturing.

Balluff Passive Interface BPI – A multi-talent, even under demanding conditions
- Outstanding design
- Fully potted housing
- High shock and vibration ratings
- Flexible mounting options
- High visibility of LEDs
- Large terminal compartment
- Modular design
- Quick to mount/detach for transportation

M8 female straight, 3-pin, without LED, for temperatures up to 120 °C

Connector BCC up to 120 °C
The durable connectors BCC with IP 68 protection are ideally matched to the wiring and suitable for rapid connection of sensors/actuators in the industrial automation sector. New products include versions for high-temperature applications up to 120 °C, for example, for the connection of high pressure-resistant sensors in hydraulic applications.

- Temperature range –25…+120 °C
- Degree of protection IP 68
- Flame-resistant
- Straight and right-angle
- 3-pin, 4-pin
- Easy to find notches on the handle body

120 °C

Pottable connectors

Weld splatter-resistant PUR lines

PUR lines for especially tough conditions
Standard PUR lines have numerous advantages. They are resilient, wear-resistant, impact-resistant and resistant against solvents. With the new weld splatter-resistant versions to ISO 14001, you can easily replace crosslinked cables that become expensive hazardous waste after use. Possible field of applications include automobile manufacturing, in particular, bodyshell work.

- Resistant to sparks and weld spatter
- Degree of protection IP 68
- ISO 14001 compliant – not hazardous waste
- Replacement for crosslinked lines
- Jacket color: Black
- Torsional stress 180 °C
- Fulfill all requirements of the automotive industry

Other cable lengths on request.
Connectors without LED are suitable for PNP and NPN switching functions. NPN versions with LED on request.

M12 female right-angle, user-fabricated and pottable

Hook up, seal, forget

Until now, you had a difficult choice when installing plug connectors. Either you could use a plug with a molded cable and in this manner achieve higher leakproofness, or you could decide in favor of an adjustable plug, if you need flexible cable length.

This either/or is now over. Because the adjustable and castable BCC0CAA plug provides both: higher leakproofness and flexible cable length. The cable is shortened, connected and the plug is easily molded (see drawing). With the BCC0CAA, you increase the reliability of your installation and simultaneously decide the cable length yourself.

In harsh environments and extensive systems, the plug is therefore outstandingly well suited.

Features

- Higher leakproofness
- Flexible cable length
- Reliable
- For harsh environments
- For extensive systems

Connector diagram and wiring		
Connector		M12
Version		Can be fabricated
Use		Female
Ordering code		**BCC0CAA**
Part number		BCC S445-0000-1A-000-51X475-000-C024
Max. supply voltage AC U_B		125 V AC
Max. supply voltage DC U_B		125 V DC
Wire cross-section		0.14...0.75 mm²
Cable diameter		6...8 mm
Degree of protection as per IEC 60529		IP 67
Ambient temperature T_a		–25...+85 °C
Material	Grip body	PBT, transparent
	Contact	CuZn
	Contact holder	PA

Valve Connectors

From sensors to cables, Balluff offers extensive, well-engineered system technology that leaves nothing to be desired outside of the switching cabinet.

Balluff valve connectors have an outstanding record in harsh industrial use and adverse conditions. They withstand large temperature differences as well as heavy contamination and their integrated protective circuit effectively prevents voltage peaks. In addition, the drag-chain compatible PUR and PVC valve connectors are available only from Balluff.

Choose the EN 175301-compliant valve connectors for extra flexibility

- With or without protective circuit
- With 100% on-time at –25...+80 °C
- Various styles in accordance with DIN and industry standard
- Drag chain-compatible connections with PUR and PVC cable

Power Supplies

Power Supplies

Industrial automation is becoming ever more demanding and the complexity of its tasks is constantly increasing. Efficient operation of equipment and machines demands reliable power sources more than ever. Balluff power supplies are the powerful solution for fault-free system operation.

Take advantage of the special benefits of Balluff power supplies

- Full product line – choose just what you need
- Short-circuit and overload protection in industrial environments
- High availability of all devices
- Unlimited, precise power for increased demands
- Long service life for reliable operation
- Worldwide approvals for use anywhere

Power Supplies

Power Supplies
Reliable performance for high requirements

Every industrial automation system needs a reliable, clean, and controlled source of power without spikes. Only then can these systems deliver the expected performance.
Balluff power supplies ensure reliable power even under demanding conditions and deliver reliable, high-quality performance.

- **Ultra-reliable power supplies**
  for protecting sensitive control electronics
- **Protection against unforeseen events**
  Integrated overload and overvoltage protection
- **Wide selection of models**
  Individual devices or individually combinations of different models available
- **Clean, precise power supply for particularly demanding systems**
  Load regulation ± 1% for all models, ripple and noise under 50 mV for most models
- **Long service life for less system downtime**
  MTBF (Mean Time Between Failure) up to 800,000 hours/ 91 years

[2] = 115/230 V AC (Auto-Select)
[3] = 340...575 V AC

Power for controllers and networks
Specially developed for controller units, Balluff power supplies can be perfectly integrated into control packages.

The PS series of ultra-reliable power supply units is available in a wide range of 12, 24, and 48 V DC models with single or 3-phase input. With a bandwidth of 18 to 960 W, they truly leave nothing to be desired. Several power supplies can be connected for even more power (parallel mode).

If you need other voltage levels, simply contact us.

Power Supplies

Reliable performance for the high requirements in industrial automation

Intelligent power supply units –
For outstanding system availability
If you want to operate your systems and machines with maximum efficiency, the power supply you use must be reliable. Intelligent power supply units from Balluff guarantee a high degree of reliability. They provide a complete picture of their environment wherever they are installed, allowing you to monitor the environment continuously.

LEDs for easy monitoring
- Load level
- Stress level
- Lifetime

LEDs indicate the load level and stress level so the operator knows immediately when the unit is operating at maximum performance. LEDs also show the service life of the devices, simplifying maintenance and operation. The user can also see when a device has to be replaced. This is how Balluff power supply units contribute to increased system availability.

The benefits to you
- Continuous monitoring of machines and systems
- Reliable power supply units guarantee efficient operation
- Optimized use of devices and a longer service life
- Maintenance planning
- Devices only replaced when necessary

Versions
Intelligent power supply units from Balluff are available in two versions

IP 20 (with screw terminal)
- With wide input voltage range from 90...264 V AC
- Designed for versatile use in industrial automation
- Also satisfies all wind turbine requirements

IP 67 (with connector)
- Can be used directly in harsh environments
- Fully potted housing
- High shock and vibration ratings

Reliable performance for the high requirements of industrial automation

Load level

Load level
- Reversible in short term

Load level indicates the current load on the device. The display indicates the load without delay.

Heartbeat

Stress level
- Reversible in medium term

Stress level indicates the physical and thermal loads. Changing the load has an effect on device wear.

Wear indicator

Lifetime
- Irreversible in long term

Lifetime indicates the remaining service life of the device based on the sum of all loads.

All indicators are multi-colored – green, yellow, or red – and show the status of the device.

Intelligent devices for the demanding requirements of industrial automation

Intelligent power supply units

The installation of local power supply units without switch cabinets with the IP 67 degree of protection is becoming more popular in industrial automation. Although local power supply units are already available, they are generally difficult to access once installed.
To further complicate matters, it is practically impossible to monitor the operating state. As a result, operators rely on preventive maintenance concepts to guarantee maximum possible availability. This procedure is reliable, but also expensive, because devices are frequently replaced during the maintenance cycle well before the end of their service life, as there is no alternative system available.

For the first time, intelligent, energy-saving power supply units from Balluff remedy this situation. They have visual displays that indicate their status – with load level, stress level and lifetime.
This enables operation under continuously high load and eliminates the need for typical reserves of 30 to 50%.

Ideal areas of application for these intelligent power supply units include local installations in the automobile industry, machine construction, wind turbines, etc.

IP 20

General key information about the IP 20 and IP 67 power supply units

- High efficiency of up to 92%
- Minimal heat loss and generation
- Increasing efficiency of the systems
- 3-stage status indication
- Power boost (150% for 4 sec.)
- Extremely compact
- More efficient utilization of the power supply units
- Planned reserves are not wasted
- Prevention of failures since there is no continuous overload
- Scheduled maintenance and repairs no longer necessary
- Higher productivity
- PSU replaced only at the end of its service life
- Service life of 15 years (at 80% load and 40 °C)
- Enclosed housing guarantees high degree of resistance to vibration and shock loads
- With IP 20, also with floating alarm contacts

IP 67

Basic Information and Definitions

Contents

Cable properties

Cable types

PUR cable, PUR insulated

Number of conductors × conductor cross-section	Outside diameter typical
3×0.14 mm²	2.5...3.5 mm
3×0.25 mm²	3.5...4.5 mm
3×0.34 mm²	4...5.5 mm
4×0.14 mm²	3...4 mm
4×0.34 mm²	4...5.5 mm
8×0.25 mm²	6...8 mm
12×0.25 mm²	6...8 mm
5×0.34 mm²	5...6.5 mm
3×1.5 mm²	7.8...8.2 mm
4×1.5 mm²	7.8...8.2 mm
5×1.5 mm²	8.5...8.9 mm

Number of conductors × conductor cross-section	Outside diameter typical
2×0.14 mm²	2.5...3.5 mm
2×0.34 mm²	4.5...5.5 mm
3×0.14 mm²	2.7...4.5 mm
3×0.25 mm²	4...5 mm
3×0.34 mm²	4.5...5.5 mm
4×0.34 mm²	4.6...5.5 mm
5×0.34 mm²	5.0...5.5 mm
8×0.25 mm²	5.8...6.2 mm

Smallest bending radius

Tensioned	Untensioned
10×D	5×D

Special cable

The PW-cable is a weld spatter-resistant PUR-cable that has good resistance to weld splatter. A special connection cable is used for sensors that need to be used at higher ambient temperatures.

Tightening torques

The permitted tightening torque is indicated in the data sheets for the modules.

Current load capacity

M5	3 and 4-pin	1 A
M8	3 and 4-pin	4 A
M12	3 and 5-pin	4 A
M12	8-pin	2 A

Testing laboratory

The Balluff testing laboratory operates in accordance with ISO/IEC 17025 and is accredited by DAkks for testing electromagnetic compatibility (EMC).

DAkkS Deutsche Akkreditierungsstelle D-PL-12017-01-01

Balluff products comply with EU directives

Products that require labeling are subject to a conformity evaluation process according to the EU directive and the product is labeled with the CE marking.
Balluff products fall under the following EU directive:

2004/108/EC	EMC directive
2006/95/EC	Low Voltage Directive valid for products with supply voltage ≥ 75 V DC/≥ 50 V AC
94/9/EC	ATEX-directive valid for products with Ex-label

Product approvals

Product approvals are awarded by domestic and international institutions. Their symbols affirm that our products meet the specifications of these institutions.

"US Safety System" and "Canadian Standards Association" under the auspices of Underwriters Laboratories Inc. (cUL).

CCC-Code by the Chinese CQC.

Standards

Protection class	II ⧈	EN 60947-5-2/IEC 60947-5-2
Degree of protection	IP 60...67	EN 60529/IEC 60529
	IP 68 per BWN Pr. 20	Balluff factory standard (BWN): Temperature storage 48 h at 60 °C, 8 temperature cycles according to EN 60068-2-14/IEC 60068-2-14 between the benchmark temperatures according to the data sheet, 1 h storage in water, insulation inspection, 24 h storage in water, insulation test, 8 temperature cycles according to EN 60068-2-14 IEC 60068-2-14 between the benchmark temperatures according to the data sheet, 7 days storage in water, insulation test.
	P 68 according to BWN Pr. 27	Balluff Factory Standard (BWN): Test for products used in the foods industry
	IP 69K	DIN 40050 Part 9: Protection against ingress of water at high-pressure and steam cleaning
EMC (Electromagnetic Compatibility)	Emissions, RF noise voltage and RF noise radiation from electrical equipment	EN 55011
	Static discharge immunity (ESD)	EN 61000-4-2/IEC 61000-4-2
	Radio frequency immunity against high-frequency electromagnetic fields (RFI)	EN 61000-4-3/IEC 61000-4-3
	Immunity to fast transients (bursts)	EN 61000-4-4/IEC 61000-4-4
	Interference immunity against conducted interference, induced by high-frequency fields	EN 61000-4-6/IEC 61000-4-6

	Electrical apparatus for explosive areas – intrinsic safety "i"	EN 50020

For conformity, see product marking.

Mounting torques

The following torques are to be followed so that the sensors are not mechanically destroyed during installation, as long as no other information is indicated on the data sheet or the sensor packaging.

Size	Material	Tightening torque
M5×0.5	Stainless steel	3 Nm
M8 × 1	Stainless steel	15 Nm
M12×1	Stainless steel	40 Nm
M18×1	PBT	1 Nm
M18×1	Stainless steel	60 Nm
M30×1.5	PBT	3 Nm
M30×1.5	Stainless steel	90 Nm

Degree of protection

The degrees of protection are given according to IEC 60529. Code letters IP (International Protection) designate protection for electrical equipment against shock hazard, ingress of solid foreign bodies and water

IP 69K
Protection against ingress of water at high pressure and steam cleaning per DIN 40050 Part 9

First digit:
2 Protection against penetration of solid bodies larger than 12 mm, shielding from fingers and objects
4 Protection against penetration of solid bodies larger than 1 mm, shielding from tools and wires
5 Protection against damaging dust deposits, complete contact protection
6 Protection against penetration of dust, complete contact protection

Second digit:
0 No special protection
4 Protection against water, which is sprayed from all directions against the equipment
5 Protection against a stream of water from a nozzle which hits the equipment from all directions
7 Protection against water, if the equipment (housing) is temporarily submerged
8 Protection against water when submerged for some time

Decision help

Tec

We offer ...
- Decision help for the correct product selection
- Complex product and application support
- Integration support
- Customer-specific product and commissioning training
- Intensive technical support during the entire phase of the project
- Assumption of time-consuming project work

We support you during the project implementation, commissioning and integration
- Would you like to monitor and track production processes?
- Would you like to identify, control, monitor and optimize objects?
- Would you like to optimize and simplify your system wiring?

We provide you with specific support for Balluff system components
- Vision sensors BVS for optical identification
- Industrial networking and connectivity for wiring and networking
- IO-Link – network technology for reliable data transfer and greater efficiency
- Industrial identification – RFID for transparency in material flow

We are happy to help!

Support

Customized Services

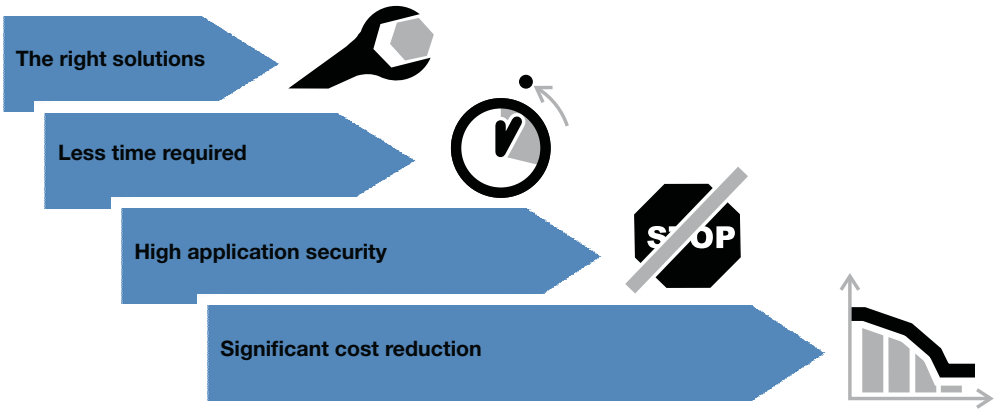
According to your specifications. In the best quality.

Balluff offers highly efficient sensor technology with high-performance mini sensors and compact connection technology. And more. Because with our extensive services, you can obtain support direct from the manufacturer: from the design and planning of your projects, to testing and setup on-site, to training and support. Over the entire life cycle of our products.

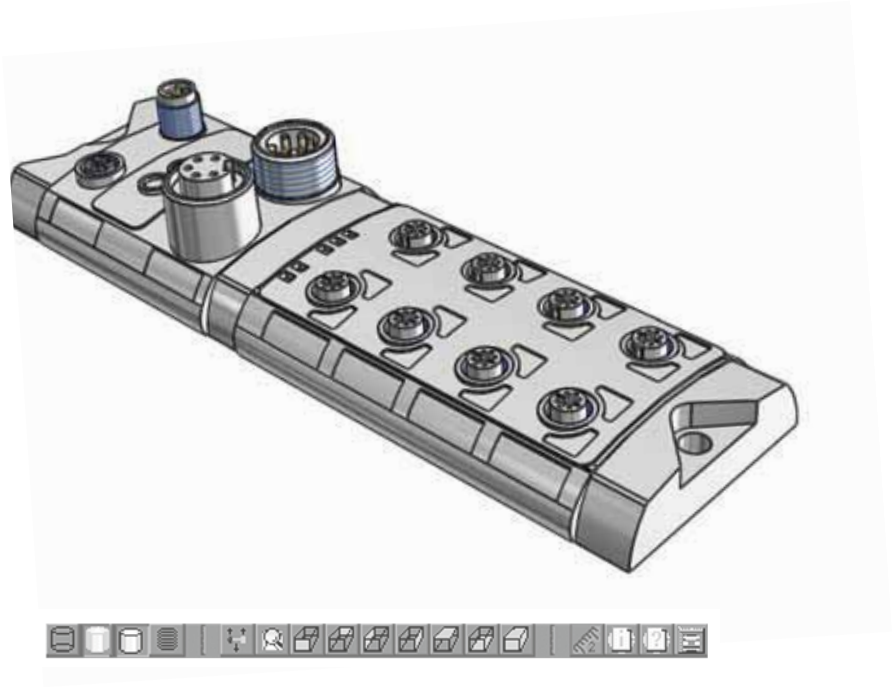
This creates greater planning security and provides faster commissioning and an earlier start of production. This leads to higher productivity and more cost-effectiveness. And this relieves you of additional stress in your everyday work, giving you more time to focus on your core business.

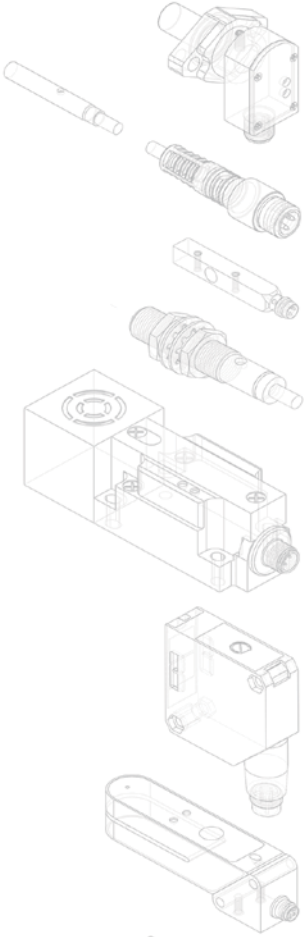
You can find more information in our Services brochure or send us an e-mail: tsm.de@balluff.com

Application advice through our TecSupport: Discuss your technical requirements. And take advantage of our expertise.	Real-world examples: ■ Selection of the correct identification procedure for an assembly line ■ IO-Link concept as a cost-effective alternative to conventional wiring ■ System consulting for radio frequency identification (RFID): identification of large steel pipes in adverse environments ■ Recognizing multiple containers on a pallet in goods receiving
Commissioning: Order expert knowledge. And benefit from a quick start of production.	Real-world examples: ■ Setting up an optical checkpoint with the vision sensor BVS ■ Consulting and support during the programming of RFID systems BIS ■ Installation and commissioning of a color detection application with the color sensor BFS
Fully customized products: Order individual versions according to your requirements: from preassembly to engineering services. And take advantage of the optimum.	Real-world examples: ■ Extending the housing of a high-pressure resistant inductive sensor BHS ■ Extra threads for the housing cover of a micropulse transducer BTL ■ Customer-specific holder for an RFID data carrier ■ Adaptation of the characteristics for analog sensors BAW
Workshops: Make use of well-founded manufacturer expertise. And benefit from application security.	■ **Professional sensor use:** Select operating principles, install sensors professionally and ensure the reliable operation of your application. ■ **Position and Distance Measurement:** This is how you perform precise and wear-free measurements. ■ **RFID:** The right data at the right time at the right place. ■ **Vision sensor:** Using an image processing sensor, ensure manufacturing quality in three steps. ■ **Vision sensor identification:** Reliably identify data matrix codes with an image-processing sensor. ■ **Industrial networking with IO-Link:** Manage signals intelligently and cost-effectively.

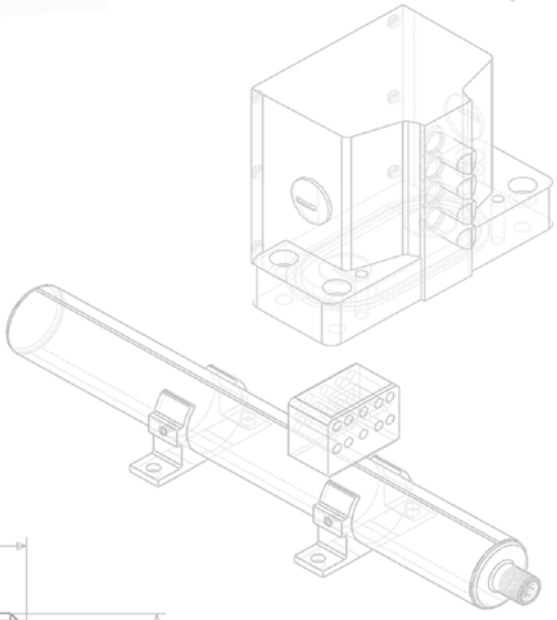


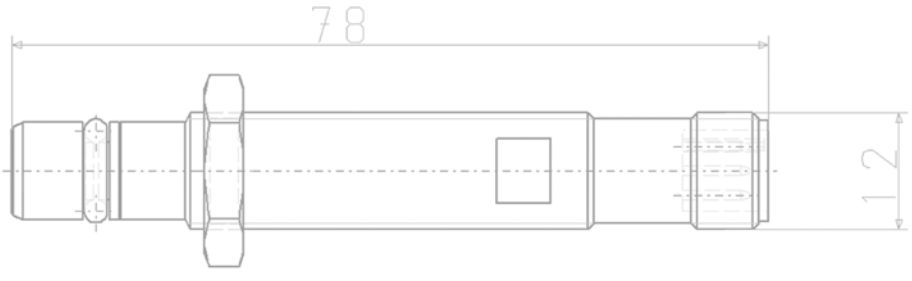
Balluff Products in 3D





- All catalog products are available: inductive sensors, photoelectric sensors, sensors for pneumatic cylinders, micropulse transducers, industrial RFID systems, vision sensors BVS, mechanical single and multiple position switches, industrial networking and connectivity, and so on.
- sizephics reduced to the essentials for optimized performance

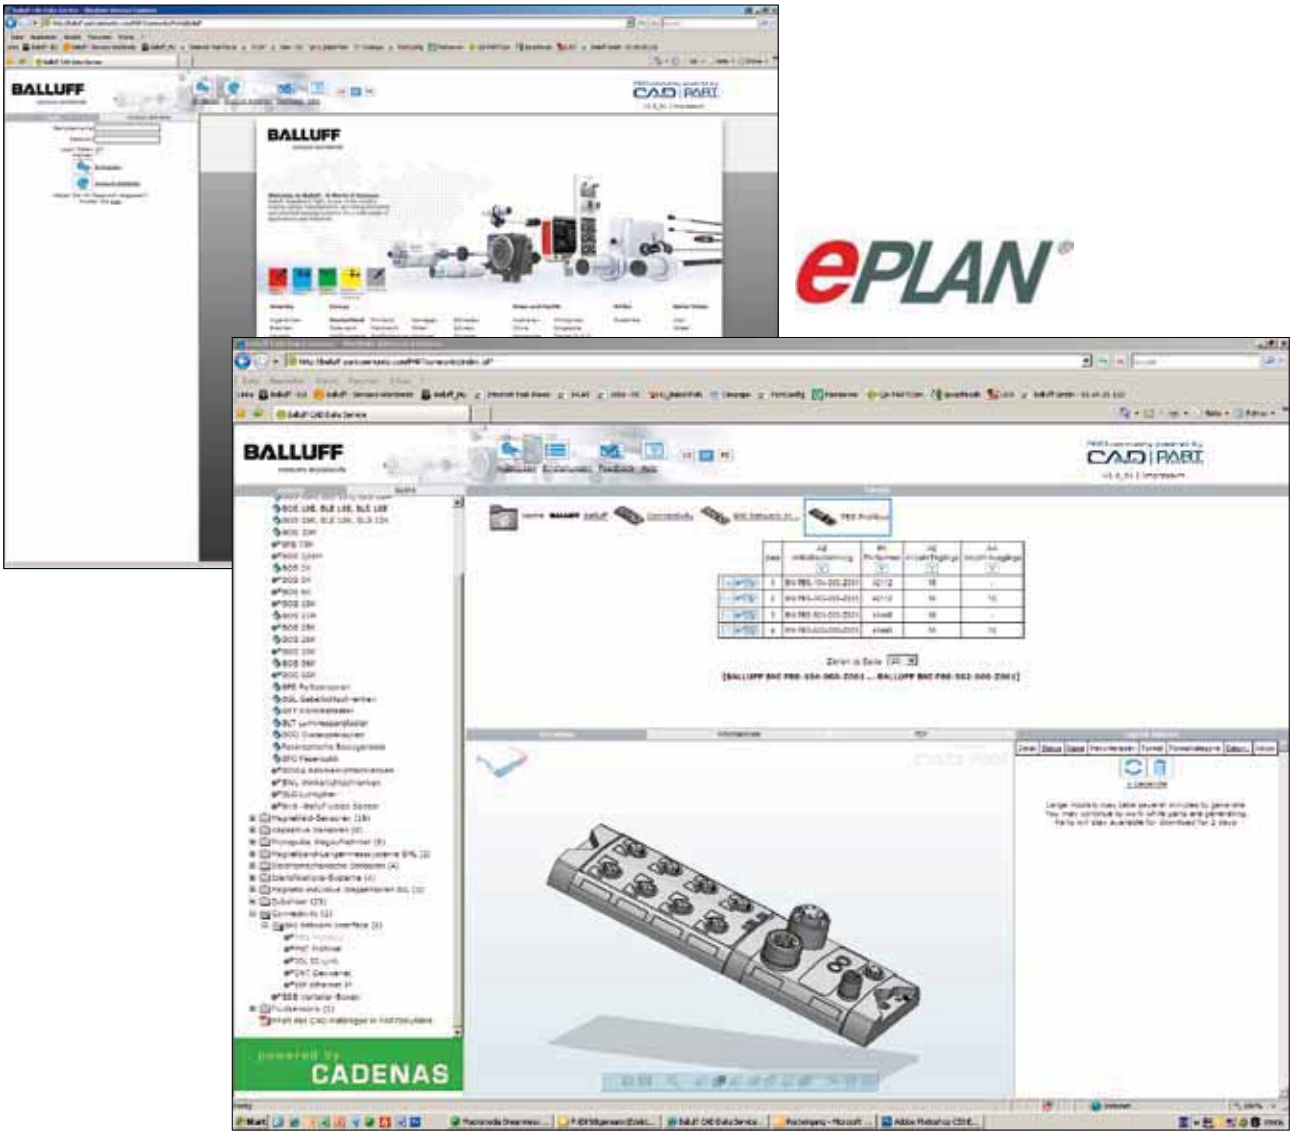




CAD formats on the Cadenas PARTserver

Retrieving Product Information Online

Various CAD and electronic diagram formats available



The benefits to you

- Faster and more efficient designing
- Free availability of all Balluff catalog products
- All common CAD formats
- Convenient preview in 3D
- Configurable products

And here is how it works

- Go to the 3D data at **www.balluff.com**
- You are redirected to the Cadenas PARTserver
- Select a sensor and perform an optional check via 3D preview
- Add it to the shopping cart
- Once you have entered your details, the CAD files of your choice are sent to you by e-mail

EPLAN macros – Electrical project planning made easy

And now users of EPLAN electrical project planning software can also profit from this free service. On our Web site planners and designers can download macros for selected Balluff products at no charge and implement them in their design. These macros include all the necessary graphics, technical and commercial information for the electrical design and documentation. Benefit from significant time and cost savings.
